ABSTRACT

TITLE: Long-Range Transportation/Land Use Plan – 2050, Appleton

(Fox Cities) Transportation Management Area

CONTACT: Kolin Erickson, Transportation Planner

AUTHORS: East Central Wisconsin Regional Planning Commission

SUBJECT: Long-range transportation/land use plans update for the

Appleton (Fox Cities) Transportation Management Area/Metropolitan Planning Organization (MPO).

DATE: October 30, 2015

PLANNING AGENCY: East Central Wisconsin Regional Planning Commission

SOURCE OF COPIES: East Central Wisconsin Regional Planning Commission

400 Ahnaip Street, Suite 100

Menasha, WI 54952 (920) 751-4770 www.ecwrpc.org

The Long Range Transportation/Land Use Plan (LRTP) update is prepared to meet the requirements of the Moving Ahead for Progress in the 21st Century Act (MAP-21) for long range transportation and land use planning in metropolitan areas. MAP-21 stresses the need for integrated multi-modal transportation planning and the development of a continuing process of consideration for all modes of travel. The LRTP has been developed for the Appleton (Fox Cities) Transportation Management Area (TMA)/ Metropolitan Planning Organization (MPO) to carry out federal transportation planning requirements. The MPO staff works in cooperation and coordination with the Wisconsin Department of Transportation (WisDOT), which is responsible for programming federally-assisted transportation projects statewide. The federal funding assistance to be programmed is provided by MAP-21 and is administered by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA).

EXECUTIVE SUMMARY: LONG RANGE TRANSPORTATION PLAN

INTRODUCTION

The Long Range Transportation/Land Use Plan (LRTP) update is prepared to meet the requirements of the Moving Ahead for Progress in the 21st Century Act (MAP-21) for long range transportation and land use planning in metropolitan areas. MAP-21 stresses the need for integrated multi-modal transportation planning and the development of a continuing process of consideration for all modes of travel. The hallmark for MAP-21 is the transition to performance based evaluation of the system that includes measures and targets for all modes. The LRTP has been developed by the East Central Wisconsin Regional Planning Commission (ECWRPC) for the Urbanized Area/Transportation Management Area (TMA) to carry out federal transportation planning requirements. The Urbanized Area works in cooperation and coordination with the Wisconsin Department of Transportation (WisDOT), which is responsible for programming federally-assisted transportation projects statewide. The federal funding assistance to be programmed is provided by MAP-21 and is administered by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA).

In preparing this report, ECWRPC has worked with WisDOT Northeast Region, transit operators, and local governmental jurisdictions to insure coordination between land use and transportation planning within the Urbanized Area.

SOCIOECONOMIC ANALYSIS

Data collection included:

- Population (historic data and projections out to 2040)
- Households (number of households both historic and projections out to 2040)
- County business patterns
- Commuting patterns data

HEALTH AND LIVABILITY

Inventory of the following:

- Active Transportation
- Safety
- Air pollution
- Access to opportunities for healthy lifestyles
- County health rankings/health outcomes and health factors

LAND USE

An inventory of existing land use was completed in June of 2014. This inventory provided a foundation for both the sewer service area plans and this transportation/land use plan. The largest land use categories (as a percentage of total TMA acreage) include: Non-irrigated Cropland (38%), Single Family Structures (16%), Undeveloped Land Areas and Water (10%), Streets/Highways and Right of Way (10%) and General Woodlands (8%).

VISION, GOALS, AND OBJECTIVES

Vision

In 2050, the Urbanized Area will have a safe, efficient, and effective transportation network which provides options for the mobility needs of all people, goods, and services, while maximizing available resources, such as land, energy and finances.

Transportation Goals and Objectives

- Integrated planning
- Maximum system effectiveness for all residents
- An efficient transportation system
- Safety
- Minimal environmental disruption
- Compatibility with land use patterns
- Conservation of energy
- Performance measures
- Environmental justice
- Coordination at all levels
- Complete streets policies
- Sustainable and livable communities

STREETS AND HIGHWAY

This chapter assesses the existing conditions of the street and highway network. Items inventoried included:

- Pavement Surface Evaluation and Rating System (PASER)
- Pavement Condition Index (PCI)
- Annual Average Daily Traffic Counts (AADT)
- Park and Ride Lot Counts
- WisDOT Rideshare Program
- Bridge Sufficiency Ratings
- Fatalities and Serious Injuries
- Census Transportation Planning Products data

MULTIMODAL TRANSPORTATION

This chapter reviews the existing bicycle and pedestrian facilities within the Urbanized Area. Recommendations for future bicycle and pedestrian projects revolve around the **5** E's: Education, Encouragement, Enforcement, Engineering and Evaluation.

PUBLIC AND SPECIALIZED TRANSPORTATION

This chapter reviews the public and paratransit system of the Urbanized Area. Data analyzed included: unlinked passenger trips (ridership numbers) and historic data on fare revenues, operating expenses and capital expenses.

FREIGHT

The Freight Chapter incorporates data on regional (county level) commodity flows both into and out of the urbanized area. Data also incorporated data on bridge sufficiency ratings and Federal Rail Administration safety data.

TRAVEL DEMAND MODEL

Travel Demand Models (TDM) are used to evaluate transportation systems and predict future traffic demands. The 2013 Northeast Regional TDM covers all of Outagamie, Winnebago, Calumet, Fond du Lac, Sheboygan, Manitowoc, Brown, Kewaunee, Door Counties and part of Oconto, Shawano, Waupaca, Dodge, Washington Counties and portions of Waupaca County. The model is further broken down into trip generation areas which include the Appleton/Fond du Lac/Oshkosh, Green Bay, Sheboygan/Manitowoc and rural areas. The Northeast TDM uses a trip based four-step model consisting of trip generation, trip distribution, mode choice, and assignment. The TDM uses socio-economic data, roadway attributes and various parameters to estimate the trip making within and across the model planning area. The Northeast TDM lets planners and others use data to show spatial relationships and ultimately gain a better understanding of the region in terms of transportation needs for the future.

SAFE ROUTES TO SCHOOL PROGRAM

The Safe Routes to School (SRTS) Program is an initiative that was included in 2005 in the SAFETEA-LU transportation bill, and continued in the MAP-21 transportation bill. The program encourages and enables communities and school districts to create safe routes for students of all ages and abilities, K-8 to use to walk or bike to school. The SRTS program focuses on the five E's (Engineering, Encouragement, Education, Enforcement, and Evaluation) when addressing these issues and making future recommendations. This program not only encourages students to walk or bike to school, but also addresses childhood obesity and environmental impacts of students walking/biking to school.

SECURITY

MAP-21 emphasizes the need to improve transportation security to strengthen America's highways. The Urbanized Area/TMA recognizes the importance of security within the planning area and will consult with local municipalities to insure transportation system security. Items included in this chapter included: review of the county hazard mitigation plans, recommendations for Intelligent Transportation Systems (ITS) infrastructure improvements and general recommendations for transit system security.

v

¹ http://www.fhwa.dot.gov/map21/summaryinfo.cfm. (4/30/14)

PERFORMANCE MEASURES

Performance measures are a new requirement as a part of the federal MAP-21 transportation legislation. Performance measures for the Urbanized Area were developed out of recommendations/strategies from the Appleton (Fox Cities) Congestion Management Process (CMP) document. Performance measures have been established and documented in previous chapters of this planning document. The purpose of this chapter is to develop a full inventory of the performance measures and to document if:

- the goal has been met;
- trending in a positive direction;
- · trending in a negative direction; and
- staying about the same.

RECOMMENDATIONS

Recommendations are developed based on committee member and public input, Transportation Improvement Program (TIP) transportation project list, aspects of the transit development plan (TDP) recommendations and local comprehensive planning policies. The TDP supports and enhances the LRTP though the complete analysis and recommendations of the transit system. Local comprehensive plans are analyzed and compared to the LRTP to identify any inconsistencies.

ENVIRONMENTAL JUSTICE

Public participation is an important part of any planning process. Environmental justice is a process which seeks to ensure that access to transportation systems and the transportation planning process is available to all, regardless of race or socioeconomic status. Concerted efforts were made to include all individuals within the planning process. Advertisements were published in the local newspaper prior to these meetings. Newsletters and notices were distributed via mail and e-mail to various committees, organizations, and agencies throughout the planning process for distribution to as many individuals as possible.

ENVIRONMENTAL MITIGATION

Environmental mitigation is a system level review on committed and planned transportation projects in relation to environmental attributes. It should be emphasized that the TMA's role in examining issues related to environmental mitigation is to scan system level issues, not a project level environmental impact document, which requires field work and specific analysis under the National Environmental Policy ACT (NEPA). Environmental attribute or set of attributes were mapped (with GIS mapping software) showing the Urbanized Area Long Range Transportation/Land Use projects and the proximity to each environmental resource. Buffers of one quarter mile are shown for improve/expand and new projects, while buffers of 250 feet are shown for bridge projects. It is assumed that potential impacts which must be mitigated for bridges are point specific. Environmental features with projects within proximity were analyzed and mitigation measures identified.

STATE AND LRTP COORDINATION

The coordination between the State LRTP and the TMA's LRTP is required by federal legislation, thus the State and MPO work together to assure that planning goals and objectives are in line with each other. The State Long Range Plan Coordination section highlights the goals and objectives that are coordinated between the two jurisdictions.

FINANCIAL ANALYSIS

The financial analysis section is intended to show that funding is reasonably available to implement the recommendations of the plan. The TMA uses an inflation factor to forecast revenues and expenditures. It is the responsibility of the TMA to show that their revenues and expenditures are fiscally constrained.

CHAPTER 1: INTRODUCTION

INTRODUCTION

The Long Range Transportation/Land Use Plan (LRTP) update is prepared to meet the requirements of the Moving Ahead for Progress in the 21st Century Act (MAP-21) for long range transportation and land use planning in metropolitan areas. MAP-21 stresses the need for integrated multi-modal transportation planning and the development of a continuing process of consideration for all modes of travel. The hallmark for MAP-21 is the transition to performance based evaluation of the system that includes measures and targets for all modes. The LRTP has been developed by the East Central Wisconsin Regional Planning Commission (ECWRPC) for the Urbanized Area to carry out federal transportation planning requirements. The Urbanized Area works in cooperation and coordination with the Wisconsin Department of Transportation (WisDOT), which is responsible for programming federally-assisted transportation projects statewide. The federal funding assistance to be programmed is provided by MAP-21 and is administered by the Federal Highway Administration (FHWA) and the Federal Transit Administration (FTA).

In preparing this report, ECWRPC has worked with WisDOT Northeast Region, transit operators, and local governmental jurisdictions to insure coordination between land use and transportation planning within the Appleton (Fox Cities) TMA.

CERTIFICATIONS

In accordance with 23 CFR 450.322(a-l) and 23 CFR 450.334(a) East Central Wisconsin Regional Planning Commission hereby certifies that the metropolitan transportation planning process is addressing major issues facing the metropolitan planning area and is being conducted in accordance with all applicable requirements of:

- (1) 23 U.S.C. 134 and 49 U.S.C. 5303, and this subpart;
- (2) In non-attainment and maintenance areas, Sections 174 and 176(c) and (d) of the Clean Air Act as amended (42 U.S.C. 7504, 7506 (c) and (d)) and 40 CFR part 93;
- (3) Title VI of the Civil Rights Act of 1964, as amended (42 USC 2000d-1) and 49 CFR part 21, and the Title VI assurance executed by the State of Wisconsin under 23 U.S.C. 140 and 29 U.S.C. 794;
- (4) 49 U.S.C. 5332, prohibiting discrimination on the basis of race, color, creed, national origin, sex, or age in employment or business opportunity;
- (5) Section 1101(b) of the Moving Ahead for Progress in the 21st Century Act (MAP-21) (Pub. L. 112-141) and 49 CFR Part 26 regarding the involvement of disadvantaged business enterprises in US DOT funded projects;
- (6) 23 CFR part 230, regarding the implementation of an equal employment opportunity program on federal and federal-aid highway construction contracts;

- (7) The provisions of the Americans with Disabilities Act of 1990 (42 U.S.C. 12101 *et seq.*) and US DOT regulations "Transportation for Individuals with Disabilities" (49 CFR parts 27, 37 and 38).
- (8) The Older Americans Act, as amended (42 U.S.C. 6101), prohibiting discrimination on the basis of age in programs or activities receiving federal financial assistance;
- (9) Section 324 of Title 23, U.S.C. regarding the prohibition of discrimination based on gender; and
- (10) Section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and 49 CFR 27 regarding discrimination against individuals with disabilities.

In addition, the Appleton (Fox Cities) TMA certifies that the LRTP contains only projects that are consistent with the metropolitan plans for the TMA.

In addition, the Appleton (Fox Cities) TMA's public participation and certification process satisfies Valley Transit's public participation requirements for the Program of Projects.

FEDERAL PLANNING REQUIREMENTS

MAP-21, signed into law in July of 2012, and predecessor transportation legislation require that all urbanized areas have a comprehensive, cooperative, and continuing planning process in place to guide effective use of federal funding assistance. MAP-21 planning requirements reemphasize the integral relationship of land use with transportation infrastructure, as well as the need to address all mobility from a multi-modal perspective, as previously emphasized under ISTEA, TEA-21 and SAFETEA-LU. Additional areas of challenge under MAP-21 (Section 134 of title 23, United States Code) include:

- (h) Scope of Planning Process.—
- (1) In general.--The metropolitan planning process for a metropolitan planning area under this section shall provide for consideration of projects and strategies that will—
 - (A) support the economic vitality of the metropolitan area, especially by enabling global competitiveness, productivity, and efficiency;
 - (B) increase the safety of the transportation system for motorized and nonmotorized users:
 - (C) increase the security of the transportation system for motorized and nonmotorized users;
 - (D) increase the accessibility and mobility of people and for freight;
 - (E) protect and enhance the environment, promote energy conservation, improve the quality of life, and promote consistency between transportation improvements and State and local planned growth and economic development patterns;

- (F) enhance the integration and connectivity of the transportation system, across and between modes, for people and freight;
- (G) promote efficient system management and operation; and
- (H) emphasize the preservation of the existing transportation system.

To carry out the comprehensive planning program, ISTEA, TEA-21, SAFETEA-LU, and MAP-21 have reconfirmed the role of a cooperative planning institution, the MPO, to guarantee that all aspects of the urbanized area will be represented in the plan's development and that planning will be conducted on a continuing basis. As the MPO for the Appleton (Fox Cities) TMA, ECWRPC is responsible for carrying out these transportation planning responsibilities.

ECWRPC STRUCTURE AND POLICY MAKING PROCESS¹

Commission Structure

The basic representation on the Commission's policy body consists of three commissioners from each county as follows:

- (1) The chairman of the county board serves on the Commission because of his/her elective office.
- (2) A second member is appointed by the county board. This individual must hold executive or legislative elective office within town, village, city or county governmental bodies with the appointing county. This member is automatically the county executive, if the county has one.
- (3) A third member is appointed by the Governor from a list of six persons nominated by the county board. At least four of these nominees must by private citizens.
- (4) Additional representatives are provided to counties with a population of 50,000 or greater, one for each attained increment of 50,000. The first additional representative is the mayor or council president of the largest city in the county, while subsequent additional members are appointed in a manner similar to the second member appointment procedures noted above.

Please reference **Figure 1-1** for a schematic representation of the Commission structure.

Transportation Committee

The Transportation Committee is comprised of 5 to 6 Commission members. This committee directs and monitors the transportation program element and maintains liaison with the Transportation Policy Advisory Committees and the Transportation Technical Advisory Committee. This committee is responsible for overseeing the transportation element of the regional plan.

¹ ECWRPC 2012-2013 Annual Report. (2/5/14)

Transportation Policy Advisory Committee (TPAC)

The Transportation Policy Committee (TPAC) facilitates regional participation and consensus building on transportation-related issues through a continuing, comprehensive, and coordinated planning process. The TPAC is composed of elected officials and board members of local governments and transportation agencies within the East Central Wisconsin Region; plus representatives from Federal Highway Administration and Wisconsin Department of Transportation. The TPAC serves as an advisory body to the Transportation Committee and the Commission on transportation related issues.

Technical Advisory Committee (TAC)

The Technical Advisory Committee (TAC) facilitates regional participation and consensus building on transportation-related issues through a continuing, comprehensive, and coordinated planning process. The TAC is composed of planners, engineers, and operators of local governments and transportation agencies within the East Central Wisconsin Region; plus representatives from Federal Highway Administration and Wisconsin Department of Transportation. The TAC serves as an advisory body to the TPAC.

Please reference **Figure 1-2** for a schematic representation of ECWRPC's transportation specific committees (Transportation Committee, TPAC and TAC).

ECWRPC Calumet, Fond du Lac, Menominee, Outagamie, Shawano, Waupaca, Waushara, Winnebago Counties State of Wisconsin **Elected Officials** (Commissioners vary WisDOT Commissioner by county) Additional representatives are provided to counties with a population of 50,000 or greater, one for each attained increment of 50,000. The first additional representative is A third member is appointed by the Governor from a list of six persons nominated by the county board. At least four of these nominees must by private citizens. A second member is appointed by the county board; this member is automatically the county executive, if the county has one. The chairman of the county board serves on the Commission because of his/her elective office. the mayor or council president of the largest city in the county, while subsequent additional members are appointed in a manner similar to the second member

appointment procedures noted above.

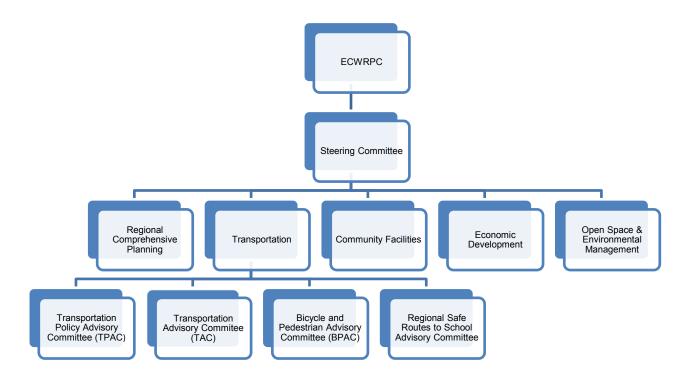

Figure 1-2: Commission Committee Structure (for transportation work flows)

ROLE OF URBANIZED AREA (UZA) AND THE METROPOLITAN PLANNING ORGANIZATION (MPO)²

The Census Bureau designates a new list of Urbanized Areas (UZAs) every 10 years, following the conclusion of each decennial census. UZAs typically:

- represent densely developed territory, encompassing residential, commercial, and other non-residential urban land uses in which social and economic interactions occur;
- represent the "Urban Footprint";
- have been explicitly defined through measures based primarily on population counts and residential population density; and
- have criteria accounting for non-residential urban land uses that are functionally part of the urban landscape.

After every decennial Census, the Census Bureau reviews and revises the criteria they use to define urban areas. Incorporated places may have very extensive boundaries that incorporate both rural and urban land, and some unincorporated areas may have development patterns with high population densities. Thus, the traditional method of using place boundaries (incorporated place or census designated place) as the basis for defining urban areas resulted in inconsistencies that were less than ideal. For the Census 2000, the Census Bureau took advantage of increased functionality of Geographic Information Systems (GIS), allowing for

² http://www.fhwa.dot.gov/planning/census issues/urbanized areas and mpo tma/. (2/4/14)

more consistent delineation processes. For the 2010 Census, the Census Bureau built upon this foundation to continue its efforts to produce an objective, comparable, and consistent urban area delineation.

The designation of UZAs by the U.S. Census Bureau has significant implications for the metropolitan planning process. Most significantly, current federal law requires that every UZA be represented by a metropolitan planning organization (MPO) which carries out the metropolitan transportation planning process for the UZA and surrounding areas. Furthermore, UZAs with populations exceeding 200,000 are designated as Transportation Management Areas (TMAs) bringing additional responsibilities.

BACKGROUND AND PROCESS

The long range transportation/land use planning process undertaken by ECWRPC is a process that has been conducted for many years. This plan will cover a 30+ year planning horizon with revisions occurring every 5 years (last updated in 2010). The planning process was conducted in three separate phases which include:

Phase 1: Analysis and Evaluation of Existing Conditions

In this phase a comprehensive inventory of existing conditions of the MPO was analyzed. Conditions and data analyzed in detail in subsequent chapters of this document include:

- Socio-economic analysis
- Existing and future land use development patterns
- Street and Highway analysis
- Multi-modal Transportation options
- Public/Specialized Transportation options
- Freight Network Analysis
- Traffic Demand Model (TDM) Analysis
- Safe Routes to School
- Security (Emergency Management)
- Performance Measures
- Environmental Justice and Mitigation
- Financial Analysis

Data Disclaimer: Some data in the following chapters was obtained from the American Community Survey (ACS). The ACS is an ongoing statistical survey by the U.S. Census Bureau representing a sample of the population over a period of time, differing from the Decennial U.S. Census where figures are based on actual counts during a point in time. ACS estimates are controlled to decennial population estimates and become less accurate over the decade, meaning estimates are only as accurate as the census count on which they are based.

ACS data can be used to draw conclusions, however, due to the limitations of these estimates, patterns can only be inferred through the data and consequently there is a larger margin of error (MOE). Small sample size increases the MOE, indicating inaccuracy and rendering the data unreliable. As a result, annual fluctuations in the ACS estimates are not meant to be interpreted as long-term trends and caution should be taken when drawing conclusions about small

differences between two estimates because they may not be statistically different. It should also be noted when comparing ACS multi-year estimates with decennial census estimates, some areas and subjects must be compared with caution or not compared at all.

Phase 2: Vision, Goals, and Objectives

In this phase the vision, goals and objectives were developed and reviewed by the Appleton (Fox Cities) Technical Policy Advisory and Technical Advisory Committees to address issues regarding land use and transportation within the urbanized area. These goals and objectives also satisfy the performance goals outlined by MAP-21.

Phase 3: Plan Recommendations, Selection, and Adoption

This recommended plan has been presented in public forums and before the Technical Advisory Committee (TAC) to gain a final set of public reactions before consideration by the Transportation Committee.

STUDY AREA

The Appleton (Fox Cities) TMA is shown in **Map 1-1**. The Appleton (Fox Cities) TMA encompasses portions of Calumet, Outagamie and Winnebago Counties; includes all or parts of the nine Towns of Buchanan, Clayton, Grand Chute, Greenville, Harrison, Kaukauna, Menasha, Neenah, Vandenbroek and Vinland; the four Cities of Appleton, Kaukauna, Menasha and Neenah; and the five Villages of Combined Locks, Harrison, Kimberly, Little Chute and Sherwood. The 2010 census figures show the population is 216,154, with an average population density of 2,083 people per square mile. The Appleton (Fox Cities) MPO is now designated a transportation management area (TMA). The TMA encompasses approximately 104 square miles of land area with 4 square miles of waterways and includes those areas potentially influenced by the expansion of urban development over the long-term. Other areas are used for particular analysis throughout the report.

PUBLIC INFORMATION MEETINGS

A sign-in sheet for the public meetings are displayed in **Appendix A**. Comments were accepted at these meetings, through the mail and by email. A comment page was created on the MPO website. Downloadable versions of the LRTP plan were available. All comments were compiled and displayed in **Appendix B**. MPO staff advertised for the public information meetings via the Oshkosh Northwestern, ECWRPC online e-newsletters, email correspondence with MPO committees, word of mouth, and through promotion on ECWRPC's Facebook page.

SURVEYS

As part of the public participation process, staff developed an 18 question survey to gauge regional input on the transportation network. The full survey and results for each question can be found in **Appendix C**. The survey responses range from March 19, 2014 to August 18, 2015. ECWRPC's Mindmixer social media outreach website/service was active from September 24,

2014 and responses were collected through January 30, 2015. Mindmixer questions and recommendations are included below.

Survey highlights/results include:

- 283 participants for Calumet, Outagamie and Winnebago Counties as of 8/18/15
- At the regional level, there was a total of 318 survey participants as of 8/18/15 (results included below)
- Question 3: How far is your commute to work? (if applicable)

Answer	Response Percent and (Number)
1 to 5 miles	33.45% (94)
5 to 10 miles	19.93% (56)
More than 10 miles	19.93% (56)
Not Applicable	18.86% (53)
Less than 1 mile	7.83% (22)

 Question 4: What modes of transportation do you use to commute to work? (check all that apply; responses equal greater than 100% as respondents could choose multiple answers)

Answer	Response Percent and (Number)
Auto (alone)	80.14% (222)
Bicycle	22.38% (62)
Not Applicable	13.00% (36)
Walk	11.55% (32)
Auto (carpool/vanpool)	5.42% (15)
Public Transit	7.04% (10)
Other	3.61% (10)

• Question 6: Approximately how often do you use your bicycle in the summer?

Answer	Response Percent and (Number)
Weekly	29.64% (83)
Occasionally	23.57% (66)
Daily	16.43% (46)
Rarely	11.07% (31)
Never	10.71% (30)
Not Applicable	8.57% (24)

 Question 7: Would you bicycle and/or walk more if additional bicycle and pedestrian facilities were available?

Answer	Response Percent and (Number)
Yes	58.27% (162)
No	24.10% (67)
Maybe	17.63% (49)

 Question 8: If you answered 'yes' to the previous question, which of the following would be helpful to you (check all that apply; responses equal greater than 100% as respondents could choose multiple answers)

Answer	Response Percent and (Number)
Extended greenway/trail system	77.72% (157)
Bicycle lanes/wide outside lanes	69.80% (141)
Bicycle trails facilities maps	38.61% (78)
Improved signage	33.17% (67)
Website or smart phone applications for bicycle/ trail	32.67% (66)
accommodations	
Parking, restrooms, water fountains, benches	30.69% (62)
More sidewalks	30.20% (61)
Safe Routes to School programs for children	26.24% (53)
Improved maintenance of existing facilities	23.76% (48)
Bicycle and walking groups	18.32% (37)
Not Applicable	8.42% (17)
Other	3.96% (8)

MINDMIXER PUBLIC COMMENTS

ECWRPC worked with a social media engagement company called Mindmixer to promote additional public comment and idea generation for the LRTP process. Through ECWRPC's Mindmixer website, staff posted a series of questions, surveys and instant polls to garner feedback from municipalities, state and federal entities and the public relating to the LRTP. These questions are posted below as well as the ideas/results for each topic.

- QUESTION: What is your vision for transportation in our community? (Imagine getting around in our community in 10 or 20 years. What do you think will change over the course of time to make it easier to get from here to there?)
 - o **RESPONSES:** *Bluetooth locator* tools to anticipate congestion and crashes
 - More trails (Need a better system of trails to help move more people around the area)
 - More options other than the private automobile: More public transit services, van-pool/car-pool networks, bike lanes/paths/trails, more transit and pedestrian-friendly design in our communities, commuter rail between Milwaukee, Chicago and Minneapolis, transit connection between Fond du Lac, Oshkosh, Neenah/Menasha, Appleton and Green Bay (perhaps a BRT with own lane on Hwy 41), creative ways to serve people in rural areas
 - Way finder signage:
 Having consistent way finder signage will help communities build a sense of pride and consistency. Cohesive signage can make a community predictable and easier to navigate.
 - More options need expanded public transit services, including both fixed route buses more frequent and to more places and paratransit services for seniors and people with disabilities, more and better sidewalks to make the whole area more pedestrian friendly, bike lanes and paths

that connect the Fox Cities together, car-pooling and van pooling programs, "community" cars and bikes (to share), commuter rail service from Chicago and Milwaukee to Appleton and on to Minneapolis, regional connections (bus rapid transit) from Fond du Lac, Oshkosh, Neenah/Menasha, Appleton and Green Bay.

- QUESTION/POLL: In the long term future (20 to 30 years from now), what areas of interest should be addressed to make a better community:
 - Urban Design, 9 votes
 - Downtown, 7 votes
 - o Parks and Open Space, 6 votes
 - Economic Development and Tourism, 5 votes
 - Arts and Culture, 5 votes
 - Sustainability and Green Living, 5 votes
 - Transportation, 5 votes
 - Historic Preservation, 4 votes
 - Safety, 2 votes
- QUESTION/POLL: What transportation options do you think our community needs more of? (How can we make our Community a more accessible place? What are the transportation problems that you think we should address first?)
 - Bicycle, 3 votes
 - o Bus, 1 votes
 - Train, 0 votes
 - Walk, 0 votes
- QUESTION: What are some congestion hot spots in our Community?
 - County Highway N from Highway 114 to County Highway OO: need bike lanes
 - Jogging/Walking through roundabouts: Some roundabouts are multi-lane and high speed. Cars are looking left and do not look for joggers or walkers. With a raised center median the pedestrians view is limited and traffic moves up quickly. In some cases cars do stop, however the second lane might not. Also, because of speed, cars are not expecting traffic to stop in a roundabout and this creates sudden braking and the roundabout to clog. For pedestrians a signalized intersection works the best.
- QUESTION: Do you think existing transportation options are adequate in our community, or could they be improved? In what way? (Are there forms of transportation [mass transit, ride share, bike] that you would like to see expanded or changed? Describe how you would improve transportation in our Community.)
 - Need to have better connections so modes can be combined: Better bike
 parking at transit stops so you don't need to take your bike with you. Bike share
 near municipal parking lots. A transit stop at municipal parking lots.

- QUESTION: Do you think existing transportation options are adequate in our community, or could they be improved? In what way? (Are there forms of transportation [mass transit, ride share, bike] that you would like to see expanded or changed? Describe how you would improve transportation in our Community.)
 - Need to have better connections so modes can be combined: Better bike
 parking at transit stops so you don't need to take your bike with you. Bike share
 near municipal parking lots. A transit stop at municipal parking lots.
 - Job Site Transportation: Our employers are having a hard time finding employees who are willing to commute from the urban areas to the rural areas.
 Would be nice to have some type of home-to-job site transportation system.
- **QUESTION:** Before making development decisions, does your community reference their comprehensive plan?
 - Yes It is part of our review process (4 votes)
 - Sometimes When there is a possible change of land use or zoning (1 vote)
 - No (0 votes)
 - Not Sure (0 votes)
- QUESTION: What bicycle and pedestrian facilities improvements would be helpful to you?
 - Extended greenway/trail system (5 votes)
 - Bicycle lanes/wide outside lanes (3 votes)
 - More sidewalks (2 votes)
 - Improved Signage (2 votes)
 - Bicycle/walking groups (2 votes)
 - Bicycle trails facilities maps (1 votes)
 - Improved maintenance of existing facilities (1 vote)
 - Safe Routes to School Programs for children (1 vote)
 - o Parking, restrooms, water fountains, benches (0 votes)
 - Website/smartphone applications for bicycle/trail accommodations (0 votes)
 - Other (0 votes)
- QUESTION: Where would you like to see future multi-use trails/greenways developed?
 - From County Highway CB to downtown Appleton. Make it a bike boulevard down the middle of the street.
 - Connect the Fox Cities with the Fox River Trail leading to Green Bay using Co. Rd. "CE" or "Z"
 - A pedestrian/bike trail from Neenah to Oshkosh would benefit many. A portion of that has been completed; however the majority of County Road "A" is very difficult for bicyclists and dangerous for pedestrians. A completed trail such as this would be both accommodating and scenic.

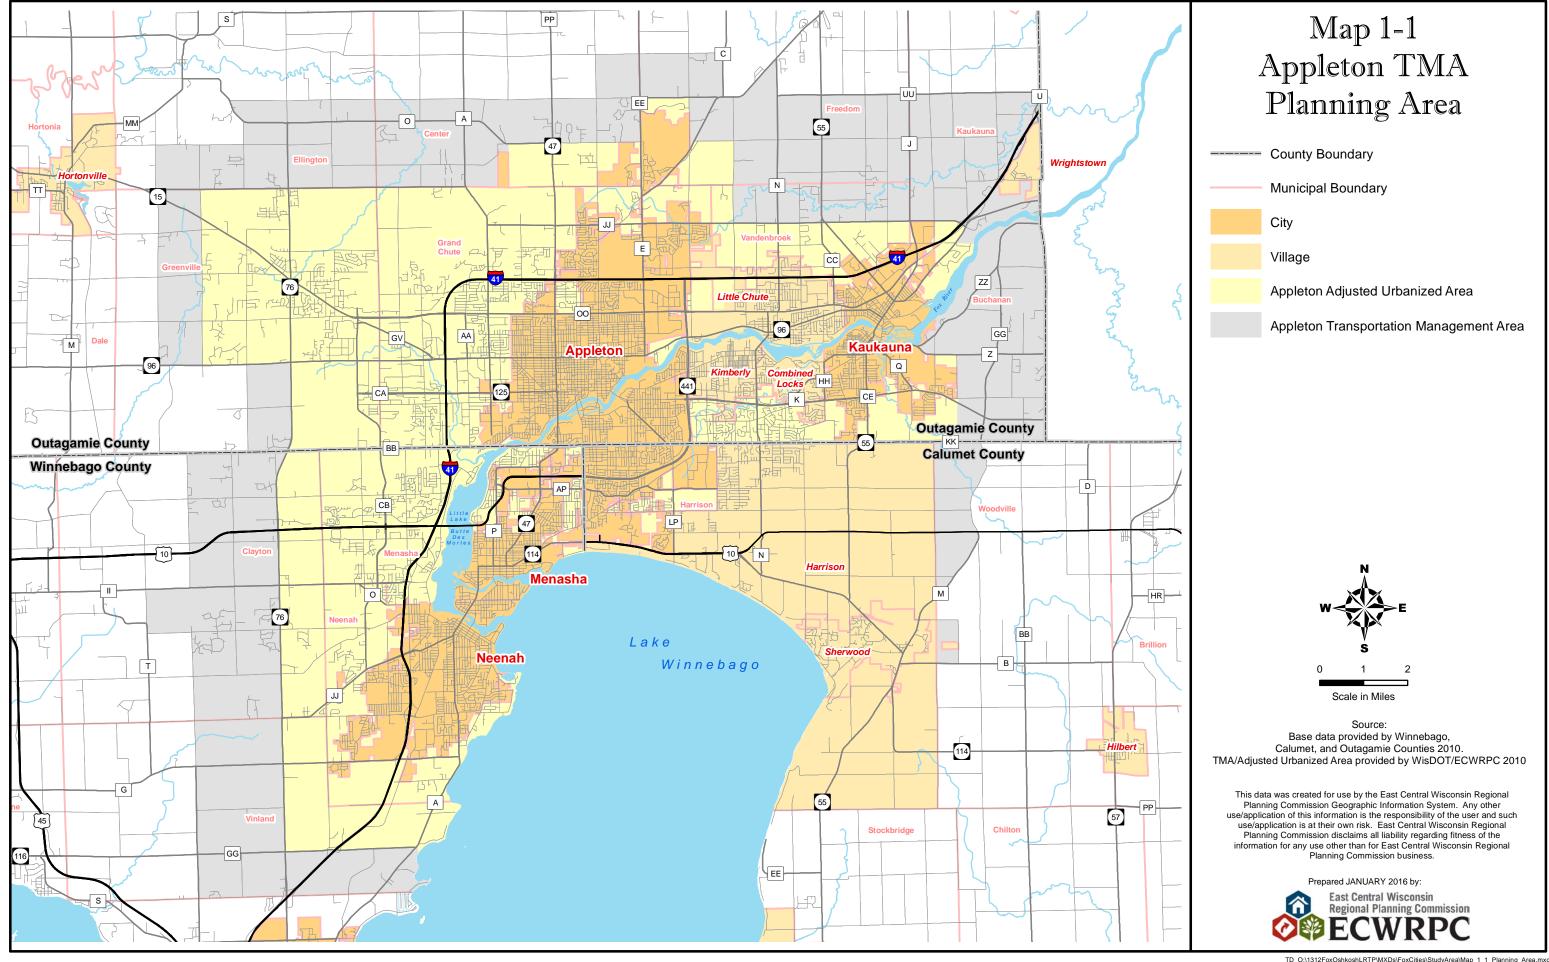

CURRENT LONG RANGE PLANNING EFFORTS

Bicycle-Pedestrian Plan

An update to the bicycle-pedestrian plan for Appleton (Fox Cities) and Oshkosh was finalized in October 2014. East Central staff worked with the Appleton (Fox Cities)/Oshkosh urbanized areas Bicycle-Pedestrian Steering Committee to develop the updated bicycle-pedestrian plan. Research was conducted to better define key issues such as creating a definition for 'on-street bicycle facilities', identifying gaps and barriers of the existing bicycle-pedestrian infrastructure within Appleton (Fox Cities) and Oshkosh, and analyzing/updating existing data and maps. Another critical component to the bicycle-pedestrian plan was the inclusion of a series of bicycle-pedestrian safety walk audits. East Central staff visited numerous intersections throughout Appleton (Fox Cities) and Oshkosh to document the status of bicycle-pedestrian accommodations; maps and photos were also prepared to illustrate the safety issues/concerns at each intersection evaluated. A system level analysis on the Appleton (Fox Cities)/Oshkosh bicycle-pedestrian plan may be found in the Multimodal Transportation Chapter of this document.

Public Participation Plan

The public participation plan (PPP) establishes procedures that allow for, encourage, and monitor participation of all citizens in the urbanized area, including but not limited to low income and minority individuals, and those with limited English proficiency. While traditional means of soliciting public involvement may not reach such individuals, or might not allow for meaningful avenues of input, the intent of this effort is to take reasonable actions throughout the planning process to provide opportunities for historically under-served populations to participate. Some of the techniques that can be used to engage the general population are public notices of meetings in the local newspaper and website, newsletters, social networks, open house format public information meetings. While these techniques will continue, staff will make a greater effort to engage the general public, possibly with techniques such as, nominal group exercises, surveys, use of local news media, etc. The full PPP may be found by accessing the following website link: http://fcompo.org/wp-content/uploads/2013/06/Final FoxCities-Appleton (Fox Cities)MPO-PPP Update 2013.pdf.

CHAPTER 2: SOCIOECONOMIC ANALYSIS

INTRODUCTION

Prior to developing the long range transportation/land use recommendations for the Appleton (Fox Cities) TMA, an understanding of general and historic socioeconomic conditions of the region is essential. The data and analysis of this chapter involves summarizing select datasets for population characteristics, household characteristics, employment characteristics and commuter characteristics. These socioeconomic conditions are developed in detail below. Generally, the region has experienced steady and continuous growth and these patterns most likely will continue for the short and long term future.

POPULATION CHARACTERISTICS

Understanding the historic and projected population characteristics of the Appleton (Fox Cities) area is crucial for determining transportation demands. **Table 2-1** displays the tri-county municipalities of the Appleton (Fox Cities) TMA with their corresponding census population estimates from 1970 to 2010. **Table 2-2** displays the percentage change of population from 1970 to 2010 (by decade) of area municipalities. **Table 2-3** displays the population density (persons per square mile, 2013) of the municipalities in the Appleton (Fox Cities) area. The area as a whole has about 710 persons per square mile. **Table 2-4** displays the population projections of local jurisdictions forecasted in five year increments starting in 2015 and out to the year 2040. Population projections were compiled by the Wisconsin Department of Administration (DOA). The Appleton (Fox Cities) area experienced steady growth between 1970 and 2010 and is projected to maintain a steady population growth through to 2040. Overall, the Appleton (Fox Cities) area is expected to grow by approximately 21 percent (a numerical increase of 53,070 residents) in total population from 2015 to 2040.

Migration patterns (both inbound and outbound) for Calumet, Outagamie and Winnebago Counties were compiled from American Community Survey (ACS) 5-year estimates (2007-2011). This data represents a snapshot in time of the overall movement of people into and out of the tri-county region from other US counties. **Tables 2-5 to 2-7** display the inbound and outbound movement of people to and from the Calumet, Outagamie and Winnebago Counties, respectively. The data shows that there is a net change of 354 residents moving out of Calumet County; a net change of 1,120 residents moving out of Outagamie County; and a net change of 339 residents moving out of Winnebago County. Please note the 2007-2011 ACS 5-year estimates are averages over the period from January 1, 2007 to December 31, 2011. Multiyear estimates cannot be used to say what was going on in any particular year in the period, only what the average value is over the full time period.¹

HOUSEHOLD CHARACTERISTICS (NUMBER OF HOUSEHOLDS)

The number of occupied housing units or simply the number of households was compiled for the Appleton (Fox Cities) Area. From 1970 to 2010, the number of households has increased by nearly 120 percent (52,965 households). **Table 2-8** displays the number of households by municipality in the tri-county Appleton (Fox Cities) area. Household projections for the tri-county Appleton (Fox Cities) area from 2015 to 2040 are expected to increase by approximately 28 percent (28,423 households). Please see **Table 2-9**.

EMPLOYMENT CHARACTERISTICS

County Business Pattern data for each county within the Appleton (Fox Cities) Area was compiled from the North American Industry Classification System (NAICS). The County Business Pattern Data was assembled for Calumet, Outagamie and Winnebago Counties from the years 2004, 2006 and 2011 to provide a recent historical employment analysis. **Tables 2-11 to 2-13** display the NAICS County Business Patterns. Data collected includes industry sector codes, a description of the industry sector, as well as compiling the total number of establishments (businesses) and number of employees for Calumet, Outagamie and Winnebago Counties. Please note that Public Administration (NAICS Code 92) was not included in this analysis.

During this brief time period, it is important to show the direct impacts of the Great Recession on the regional labor market. **Table 2-10** documents the percentage change from 2004 to 2011 for both the number of employees and the number of establishments. All three counties experienced a decrease in the percentage of employees. Interestingly, even with a decrease in employees, the percentage of establishments increased for Calumet and Outagamie Counties.

Table 2-10: Percentage Change No. of Employees and No. of Establishments, (2004-2011)

	% Change 2004-2011 No. Employees	% Change 2004-2011 No. Establishments
Calumet	-16.1	5.3
Outagamie	-0.7	0.8
Winnebago	-2.1	-5.3

COMMUTING PATTERNS

Regional workday commuting patterns place extra demands on the local and regional transportation system. Commuter Adjusted Daytime Population data was gathered from the American Community Survey (ACS) from 2006 to 2010. The Commuter Adjusted Daytime Population data compares the total number of workers in a minor civil division (MCD) to the total number of workers living in a MCD. The difference in total workers in a MCD to the total number of workers living in a MCD produces the Commuter Adjusted Daytime Population. If the Commuter Adjusted Daytime Population is a positive number, more workers are commuting out of the MCD to their work destination. Table 2-14 displays the Commuter Adjusted Daytime Population for select MCDs as well as an employment-residence ratio.

An **Employment-Residence (E-R) ratio** is a measure of the total number of workers <u>working</u> in the MCD, relative to the total number of workers <u>living</u> in the MCD. It is often used as a rough indication of the jobs-workers balance in a MCD, although it does not take into account whether the resident workers possess the skills needed for the jobs that are available. E-R ratios greater than 1.00 occur when there are more workers working in the MCD than living there. These MCDs can be considered as net importers of labor. For example, an E-R ratio of 1.19 means that there are 19 percent more workers <u>working</u> in the MCD than <u>living</u> in the MCD Values less than 1.00 indicate areas that send more workers to other areas than they receive, i.e., they are net exporters of labor. Please note that this data was not available for all MCDs within the Appleton (Fox Cities) area planning boundary as the threshold used was 2,500 workers either living within or working within a minor civil division.

Table 2-14: Commuter Adjusted Daytime Population, Appleton (Fox Cities) Area (2006-2010)

Source: U.S. Census, American Community Survey (ACS) 5-year estimates, 2006-2010 Journey to Work and Migration Statistics Branch, Population Division

Additionally, the US Census publishes data on residence to workplace county flows for the entire United States and Puerto Rico. The most recent available data is from 2006-2010 which provides the averages over this 5 year period. Calumet County has approximately 25,139 residents (workers); Outagamie County has approximately 91,680 residents (workers); and Winnebago County has approximately 83,011 residents (workers). **Tables 2-15 to 2-17** display the workflows for each county categorized by the following:

Calumet County:

- Residents living and working within Calumet County (8,533 or approximately 34 percent)
- Residents living in the county and working in a neighboring/bordering county (16,031 or approximately 64 percent)
- Residents living in the county and working in any other Wisconsin county (443 or 1.8 percent)
- Residents living in the county and working outside of Wisconsin (132 or 0.5 percent)

Outagamie County:

- Residents living and working within Outagamie County (61,714 or approximately 67 percent)
- Residents living in the county and working in a neighboring/bordering county (27,805 or approximately 30 percent)
- Residents living in the county and working in any other Wisconsin county (1,681 or 1.8 percent)
- Residents living in the county and working outside of Wisconsin (480 or 0.5 percent)

Winnebago County:

- Residents living and working within Winnebago County (59,880 or approximately 72 percent)
- Residents living in the county and working in a neighboring/bordering county (19,689 or approximately 24 percent)
- Residents living in the county and working in any other Wisconsin county (2,973 or 3.6 percent)
- Residents living in the county and working outside of Wisconsin (463 or 0.6 percent)

CHAPTER 3: HEALTHY AND LIVABLE COMMUNITIES

INTRODUCTION

Building healthy and vibrant communities takes on a multi-disciplinary approach from local and regional partnerships. Officials in the planning and healthcare fields have worked together in recent decades to advocate, promote and design more efficient and well-rounded communities which are centered on personal well-being. Specifically, planners and healthcare officials have collaborated in working on shared concerns in transportation planning to improve air quality, encourage physical activity, prevent injuries and promote wellness, among other interrelated topics. Urban planning and public health share common missions and perspectives in that "both aim to improve human well-being, emphasize needs assessment and service delivery, manage complex social systems, focus at the population level, and rely on community-based participatory methods. Both fields focus on the needs of vulnerable populations." This LRTP recognizes the importance of healthy and livable communities by promoting policies where transportation and health can better coexist. This chapter briefly outlines transportation and land use policies which support shared ideas in the planning and public health fields.

HEALTH AND TRANSPORTATION

A vision of a healthy community includes areas where people have access to healthy foods, feel safe, have opportunities for physical activity, breathe clean air, have access to gainful employment and feel connected to opportunity. Transportation has a significant role in this vision. Transportation significantly effects health through air pollution, traffic crashes, access to healthy food, access to physical activity, and economic opportunity, which are only a few of the implications.

Inventory

To categorize and make sense of these connections, the following considerations are highlighted in *Metropolitan Area Transportation Planning for Healthy Communities* report prepared for the U.S. Department of Transportation in December 2012. The report is based on research of four best practice studies and develops a comprehensive approach on how MPOs can approach health as a direct, broadly-based goal for interdisciplinary planning, and how they can consider health during all stages of the metropolitan area transportation planning process. The report identifies a "holistic" approach to health considering:

- Active transportation: Transportation systems that encourage walking or bicycling can help people to increase their levels of physical activity, resulting in significant potential health benefits and disease prevention. Transportation planners can increase opportunities for active transportation by planning regional and local transportation systems that are safe, convenient, affordable, and attractive for system users.
- Safety: The critical step for MPOs to move from traditional measures of reduced injuries and fatalities to a more holistic approach is to include safety as part of an overall goal for transportation plans and projects that lead to a "healthier community."

² Ibid. (08/13/14)

¹ http://www.cdc.gov/mmwr/preview/mmwrhtml/su5502a12.htm. (08/13/14)

- 3. Air pollution: This focus is on transportation-related air pollution emissions and their impacts on human health, such as asthma or bronchitis, and transportation planning processes that consider improved air quality as part of a holistic approach to health, in addition to meeting federal air quality requirements.
- 4. Access to opportunities for healthy lifestyles: Community design and transportation systems can support or inhibit residents in their pursuit of health-related activities. These activities may include access from residences and workplaces to: stores selling healthy food, medical offices, social service centers, and active recreation facilities. Access to health-related activities is especially critical for vulnerable and disadvantaged populations, such as the elderly and children, as well as designated Environmental Justice communities (specifically low-income and minority populations) with limited transportation options.

Using this approach the following inventory has been created.

Active Transportation

Table 3-1: Appleton MPO Existing Bicycle and Pedestrian Facility Miles

Air Pollution

C-=O+

Air pollution from cars and trucks is harmful to human health. Poor air quality increases respiratory ailments including asthma and bronchitis. The Union of Concerned Scientists lists the following as major pollutants from motor vehicles:

- Particulate matter (PM). These particles of soot and metals give smog its murky color. Fine particles less than one-tenth the diameter of a human hair pose the most serious threat to human health, as they can penetrate deep into lungs. PM is a direct (primary) pollution and a secondary pollution from hydrocarbons, nitrogen oxides, and sulfur dioxides. Diesel exhaust is a major contributor to PM pollution.
- **Hydrocarbons (HC).** These pollutants react with nitrogen oxides in the presence of sunlight to form ground level ozone, a primary ingredient in smog. Though beneficial in the upper atmosphere, at the ground level this gas irritates the respiratory system, causing coughing, choking, and reduced lung capacity.
- Nitrogen oxides (NOx). These pollutants cause lung irritation and weaken
 the body's defenses against respiratory infections such as pneumonia and influenza. In
 addition, they assist in the formation of ground level ozone and particulate matter.
- Carbon monoxide (CO). This odorless, colorless, and poisonous gas is formed by the combustion of fossil fuels such as gasoline and is emitted primarily from cars and trucks. When inhaled, CO blocks oxygen from the brain, heart, and other vital organs. Fetuses, newborn children, and people with chronic illnesses are especially susceptible to the effects of CO.
- Sulfur dioxide (SO2). Power plants and motor vehicles create this pollutant by burning sulfur-containing fuels, especially diesel. Sulfur dioxide can react in the atmosphere to form fine particles and poses the largest health risk to young children and asthmatics.
- Hazardous air pollutants (toxics). These chemical compounds have been linked to birth defects, cancer, and other serious illnesses. The Environmental Protection Agency estimates that the air toxics emitted from cars and trucks which include Benzene, acetaldehyde, and 1, 3-butadiene account for *half* of all cancers caused by air pollution.
- **Greenhouse gases**. Motor vehicles also emit pollutants, such as carbon dioxide, that contribute to global climate change. In fact, cars and trucks account for over one-fifth of the United States' total global warming pollution.

County Health Rankings measures Particulate Matter (PM) from a NASA Applied Sciences Program that collected data from 2003-2008.

Table 3-4: Average Daily Measure of Fine Particulate Matter in Micrograms per Cubic Meter (PM2.5)

County	Average daily PM25			
Calumet	11.5			
Outagamie	11.4			
Winnebago	11.6			
Wisconsin	11.5			
Top U.S. Performers	9.5 (90 th percentile)

Access to Opportunities for Healthy Lifestyles

The following plans, programs, and partners provide access for healthy lifestyles:

Existing Plans

Several communities within the Appleton MPO have developed bicycle and pedestrian plans including:

- City of Appleton On Street Bike Lane Plan July 2010
- Grand Chute Pedestrian and Bicycle Strategy 2013

Existing Programs

Fox Valley Bike Challenge

In 2009, Kimberly-Clark Corporation created an internal Bike Challenge for its 50,000+ employees. The Bike Challenge was a health and wellness initiative that was intended to encourages people to bike for transportation and recreation. In 2011, with the help of the Bicycle Federation of Wisconsin, the Challenge was successfully piloted in Wisconsin at the statewide level. The Bike Challenge then called the Get Up and Ride National Bike Challenge, which went national in 2012, had over 30,000 participants riding 12 million miles.³

Safe Routes to School

Safe Routes to School (SRTS) is a national and international movement to create safe, convenient and fun opportunities for children to bicycle and walk to and from schools. The goal of the program is to enable and encourage children K-8th grade, including those with disabilities, to walk and bike to school. The SRTS program is based on the principles of the 5-E's: Engineering, Encouragement, Education, Enforcement, and Evaluation. The program facilitates the planning, development, and implementation of projects and activities that will improve safety and reduce traffic, fuel consumption, and air pollution. The program also will play a role in reversing the alarming nationwide trend toward childhood obesity and inactivity. SRTS funds are limited to children K-8 and to projects located within two miles of a school.⁴

³ http://www.endomondo.com/campaign/national/faqs. (3/26/2013)

⁴ http://www.saferoutespartnership.org/resourcecenter/quick-facts (3/26/2013)

- Within the span of one generation, the percentage of children walking or bicycling to school has dropped precipitously, from approximately 50% in 1969 to just 13% in 2009.⁵
- While distance to school is the most commonly reported barrier to walking and bicycling⁶, private vehicles still account for half of school trips between 1/4 and 1/2 mile—a distance easily covered on foot or bike.⁷
- In 2009, American families drove 30 billion miles and made 6.5 billion vehicle trips to take their children to and from schools, representing 10-14 percent of traffic on the road during the morning commute.⁸
- A California study showed that schools that received infrastructure improvements through the Safe Routes to School program yielded walking and bicycling increases in the range of 20 to 200 percent.⁹

East Central Wisconsin Regional SRTS Program

The East Central Wisconsin Regional SRTS Program focuses on empowering local communities and school districts with the resources and knowledge needed to implement SRTS activities. By working to make it safer and more appealing for students (grades K–8) to walk and bike to school, the Regional SRTS Program is continually making strides to improve childhood health, reduce traffic congestion and pollution, and create more livable communities. The East Central Wisconsin Regional SRTS Program has been funded through Wisconsin Department of Transportation.

Participating schools are required to put together, with the assistance of East Central staff, a local SRTS plan that includes the following: student and parent surveys; bike and walk audits; and school specific recommendations. East Central staff also worked with local SRTS task forces to implement SRTS recommendations through programs such as International Walk to School Day/Bike to School Day, Walking School Bus Programs, Frequent Walker Programs, Youth Engagement Programs, and the East Central WI Regional Safe Routes to School Program is funded through a Wisconsin Department of Transportation Grant.

ADDITIONAL RANKING AND REVIEW OPPORTUNITIES

County Health Rankings

The County Health Rankings and Roadmaps program is collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. Each year County Health Rankings measures vital health factors, including high school graduation rates, obesity, smoking, unemployment, access to healthy foods, the quality of air and water, income, and teen births in nearly every county in America. The annual Rankings provide a revealing snapshot of how health is influenced by where we live, learn, work and play.

Health Outcomes vs. Health Factors

Health outcomes in the County Health Rankings represent how healthy a county is. Two types of health outcomes are measured: how long people live (length of life) and how healthy people feel while alive (quality of life).

Health factors in the County Health Rankings represent what influences the health of a county. There are four types of health factors that are measured: health behaviors, clinical care, social and economic, and physical environment factors.

Several review methodologies are included in this plan to provide a snapshot of how transportation and health are connected.

MPO Organizational Review

The Metropolitan Area Transportation Planning for Healthy Communities report developed a review process to better understand where the four best practice studies are at in integrating health into their work. The following ideas utilize this review for the Appleton MPO.

Motivation/Input for the Appleton MPO

- Safe Routes to School, Community Health Improvement Plans (CHIP), City of Appleton Bike Implementation
- Quality of life issues
- Safe Routes to School, Active Community Environments (ACEs) kit, Transform WI
- CDC grants

Incorporation of Health into the Transportation Planning Process by Appleton TMA

- Develop regional and visional goals
- Development of transportation plan
- Development of State Transportation Improvement Program and regional (TMA level)
 Transportation Improvement Program
- Monitor System Performance

Early Actions by MPOs to Incorporate Health into the Planning Process

- Define and document connections between health, land use and transportation
- Engage and enlist support of partners
- Identify ways for public health partners to participate in MPO activities

Structural Changes by MPOs to Incorporate Health into the Planning Process

- Incorporate health into MTP goals
- Develop staff and technical capacity in health-related approaches and tools
- Establish standing technical or other advisory committees with designated responsibility to oversee health topics
- Formalize participation of health stakeholders into planning process
- Incorporate health into TIP project selection criteria
- Develop performance measures that capture impact on health

Active Community Environments (ACEs) Kit

The ACEs kit was developed by the Wisconsin Nutrition, Physical Activity and Obesity Program as a way to guide communities in developing a built environment that makes it easy to be physically active on a routine basis. The kit utilizes five steps to achieve this built environment:

Step One - Getting Started. Convene a meeting of key stakeholders to have an initial discussion on possible individuals and community assets that could help further your mission.

Step Two - Assessment. Utilize the ACEs Assessment Checklist to assess the needs of the community.

Step Three - Strategies and Resources. Review and select strategies and resources provided in the ACEs kit that align with your community's needs.

Step Four - Using the assessment answers, survey responses, interview results and other data to prioritize your initiative components and to set goals and objectives.

Step Five - Set up a process to monitor progress and make necessary changes. Continue to revise the plan to create and maintain a healthy environment for all residents and visitors.

Step Two of this process is utilized in this planning effort to provide an assessment of the Appleton (Fox Cities) TMA.

TRANSPORTATION/LAND USE POLICIES

Compact Development

The TMA supports land use policies which promote compact development land use patterns. The Urban Land Institute categorizes compact development that has most or all of the following:

- concentrations of population and/or employment;
- · medium to high densities appropriate to context;
- a mix of uses:
- interconnected streets;
- innovative and flexible approaches to parking;
- pedestrian, bicycle and transit-friendly design; and
- access and proximity to transit such as Transit Oriented Development (TOD).¹⁰

Infill Development

Infill development is the process of developing vacant and/or underutilized land parcels within existing urban areas. Rather than developing open land parcels on the urban fringe, infill development focuses on rebuilding city centers first before expanding further outward of urban areas. The TMA supports infill development land use policies.

Transit Oriented Development

Transit Oriented Development (TOD) is a planning method which aims to create more walkable, vibrant communities. It emphasizes the importance of an integrated transportation system, taking into consideration all modes of transportation (personal vehicles, public transportation, bicycles and pedestrians). TOD supports public transportation (bus, bus rapid transit, trolley, etc.) as a means to reduce congestion in city centers. While the Appleton (Fox Cities) TMA does not experience significant traffic congestion relative to larger metropolitan areas, it is important to maintain and strive to continuously improve the local public transportation system. Benefits of TOD include¹¹:

- higher quality of life;
- better places to live, work and play;
- greater mobility with ease of moving around;
- increased transit ridership;
- reduced traffic congestion and driving;
- reduced car accidents and injuries;
- reduced household spending on transportation, resulting in more affordable housing;

¹⁰ http://www.reconnectingamerica.org/assets/Uploads/2010 landusedrivinglowres.pdf (page 8, 02/21/14)

http://www.transitorienteddevelopment.org/ (08/13/14)

- healthier lifestyle with more walking and less stress:
- higher, more stable property values;
- increased foot traffic and customers for area businesses:
- greatly reduced dependence on foreign oil;
- greatly reduced pollution and environmental destruction;
- reduced incentive to sprawl, increased incentive for compact development;
- less expensive than building roads and sprawl; and
- enhanced ability to maintain economic competiveness.

Smart Growth

Smart Growth principles are strategies and policies which promote a shift away from conventional development patterns and focus on quality of life issues such as supporting better housing, transportation, economic development and preservation of environmental quality. 12 It is similar to concepts shared with TOD, infill development and compact development mentioned above. The US EPA outlines the following guidelines for smart growth 13:

- mix land uses:
- take advantage of compact building design;
- create housing opportunities and choices for a range of household types, family size and incomes:
- create walkable neighborhoods;
- foster distinctive, attractive communities with a strong sense of place;
- preserve open space, farmland, natural beauty, and critical environmental areas;
- reinvest in and strengthen existing communities and achieve more balanced regional development:
- provide a variety of transportation choices;
- make development decisions predicable, fair and cost-effective; and
- encourage citizen and stakeholder participation in development decisions.

National Association of Transportation Officials (NACTO)

The National Association of Transportation Officials (NACTO) published reference materials for designing better streets/infrastructure for driving, walking, biking and public transportation. Their guide is called the *Urban Street Design Guide*. This guide provides useful information/principles to help cities and officials with planning for the future. Items of interest include:

- streets:
- street design elements;
- interim design strategies;
- intersections:
- intersection design elements; and
- design controls.

For more detailed information on the Urban Street Design Guide, please visit: http://nacto.org/usdg/ to learn more.

HEALTH AND LIVABILITY PERFORMANCE MEASURES

Commute Alone

This measure represents the percentage of the workforce that primarily drives alone to work.

Reason for Ranking

The transportation choices that communities and individuals make have important impacts on health through active living, air quality, and traffic crashes. The choices for commuting to work can include walking, biking, taking public transit, or carpooling, the most damaging to the health of communities is individuals commuting alone. In most counties, this is the primary form of transportation to work.¹⁴

Long Commute – Driving Alone

This measure estimates the proportion of commuters, among those who commute to work by car, truck, or van alone, who drive longer than 30 minutes to work each day.

Reason for Ranking

A 2012 study¹⁵ in the American Journal of Preventive Medicine found that the farther people commute by vehicle, the higher their blood pressure and body mass index. Also, the farther they commute, the less physical activity the individual participated in.¹⁶ Our current transportation system also contributes to physical inactivity—each additional hour spent in a car per day is associated with a 6 percent increase in the likelihood of obesity.^{17,18}

Data was gathered for Calumet, Outagamie and Winnebago Counties for number of workers, number of workers who drive alone, percentage of workers who commute 30 or more minutes to work. This data was available from the years 2011 – 2014 for number of workers, number of workers who drive alone, percentage of workers who drive alone and for 2014 for percentage of workers who commute 30 or more minutes to work. **Table 3-6** displays this data. Additionally, for the State of Wisconsin, approximately 80 percent of drivers commute alone. These three counties show similar trends to the state for percent of workers who drive alone; Calumet, Outagamie and Winnebago Counties are slightly below the state average for percent of workers who commute 30+ minutes to work (23, 19 and 16 percent respectively, compared to 26 percent).

Air Quality Data – Ozone

Ground level ozone is the main component of smog. Ozone can also adversely affect one's health. As such, people with lung disease, children, older adults and people who are active outdoors may be adversely impacted by elevated levels of ozone in the air. ¹⁹ In addition to negatively impacting people, elevated levels of ozone can cause damage to sensitive vegetation and ecosystems. ²⁰ Primary sources of ozone include emissions from industrial facilities and electric utilities, motor vehicle exhaust, gasoline vapors and chemical solvents. ²¹ Ozone data is measured in units of parts per billion (ppb). As part of the Clean Air Act, the Environmental Protection Agency (EPA) is required to set National Ambient Air Quality Standards (NAAQS).

For ozone, the air quality standard (maximum) is set at 0.075 parts per million (ppm), which equals 75 ppb. This 0.075 ppm standard represents the "Annual fourth-highest daily maximum 8-hr concentration, averaged over 3 years". ²² **Figure 3-4** displays the average daily ozone levels for Outagamie County as reported by the Wisconsin DNR Air Quality Trends Report (2014). Please note that ozone monitoring stations are not available for Calumet and Winnebago Counties. Outagamie County ozone values have consistently remained below the NAAQS.

PM2.5 and ozone monitoring in Outagamie County is done at 4432 North Meade Street in Appleton near a neighborhood.²³ Please note that the current air quality standard of 75 ppb may in the near future be reduced to 60-70 ppb by the EPA. Information is available in a report titled *Policy Assessment for the Review of the Ozone National Ambient Air Quality Standards*.²⁴ Calumet, Outagamie and Winnebago Counties could potentially be listed as non-attainment counties.

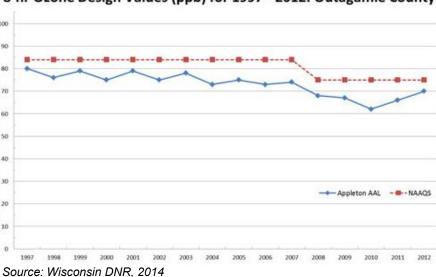

Figure 3-4: Historic Ozone Values, Outagamie County 8-hr Ozone Design Values (ppb) for 1997 - 2012: Outagamie County

Air Quality Data - Particulate Matter (PM2.5)

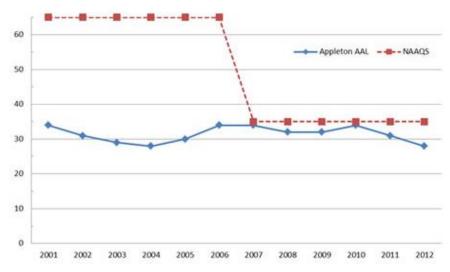

Particulate matter (PM) is another data set that is useful for determining relative air quality. The EPA defines particulate matter as "a complex mixture of extremely small particles and liquid droplets. Particle [matter] is made up of a number of components, including acids (such as nitrates and sulfates), organic chemicals, metals and soil or dust particles". The EPA defines PM particles as either "inhalable course particles" or "fine particles" and for the purpose of this analysis, only fine particle data was gathered from the DNR. The EPA defines fine particles as "those found in smoke and haze, are 2.5 micrometers in diameter and smaller; these particles can be directly emitted from sources such as forest fires, or they can form when gases emitted from power plans, industries and automobiles react in the air". ²⁶

This data was gathered from the Wisconsin DNR Air Quality Trends Report (2014) (same as ozone data above). It was averaged to find yearly PM2.5 totals from 2009 through 2013. The EPA's National Ambient Air Quality Standards for PM2.5 (24-hour) is approximately 35 micrometers and 15 micrometers for annual PM2.5 (changed to 12 micrometers in January 2014). **Figures 3-5 – 3-6** display the PM2.5 (micrometers) for Outagamie County (24 hour and annual data, respectively). Outagamie County has consistently remained below the NAAQS.

CHAPTER 4: LAND USE AND DEVELOPMENT

LAND USE AND DEVELOPMENT

Historical land use trends and existing land use characteristics are essential to determining future land use/transportation relationships. Since 1960, the Appleton (Fox Cities) study area has experienced significant changes in urban land use patterns. While the urban core (contiguous urban development) has expanded, the 1960s began a 20 year period of significant scattered urban uses through the planning area. Between 1960 and 1970, approximately 25 percent of urban development was scattered beyond the urban core. This trend was most evident in the towns surrounding the urban core, such as the Town and Village of Buchanan, Town of Grand Chute, and Town of Menasha. During the 1970s, various state and local land use and environmental regulations were adopted, which impacted these land use trends and provided for more compact and dense development. By the 1990s, significantly less scattered urban development was occurring. This trend continues today.

The changing density of development has also had an impact on land consumption. In 1957, scattered single family residential development averaged 1.7 units per acre. In 1995, scattered single family residential development averaged 2.6 units per acre. Over this time period, land uses have changed from very scattered residential or agricultural to more developed residential on the urban fringe. Scattered residential persists further beyond the urbanizing areas. In the urban core area, industrial and commercial land consumption has also increased significantly with a trend toward less dense development. As an example, significant increases in parking areas for retail centers have created greater land consumption.

LAND USE

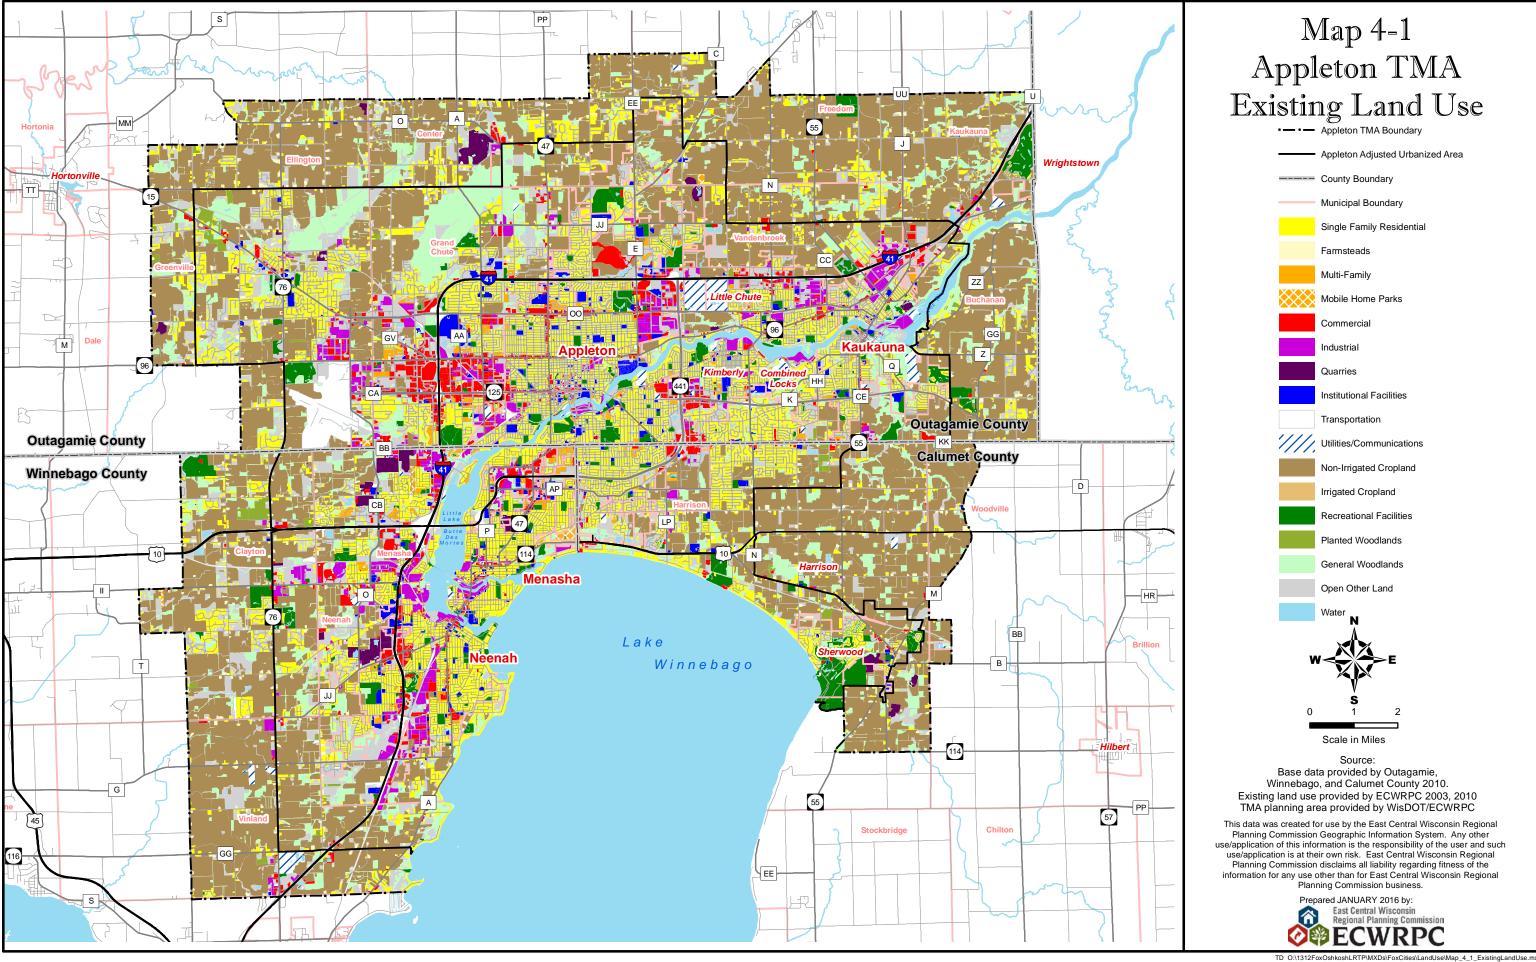

An inventory of existing land use was completed in June of 2014. This inventory provided a foundation for both the sewer service area plans and this transportation/land use plan. The results of the inventory are depicted in **Table 4-1**. The largest land use categories (as a percentage of total TMA acreage) include: Non-irrigated Cropland (38%), Single Family Structures (16%), Undeveloped Land Areas and Water (10%), Streets/Highways and Right of Way (10%), General Woodlands (8%) and **Map 4-1** displays the existing land use categories for the Appleton (Fox Cities) region; **Map 4-2** displays the future land use classifications.

CHAPTER 5: ADOPTED VISION, GOALS, AND OBJECTIVES

INTRODUCTION

East Central first developed the vision, goals and objectives for transportation/land use planning in the mid 1970s, and updated those goals and objectives in the early 1980s. The passage of the Intermodal Surface Transportation Efficiency Act (ISTEA) in 1991 required all MPOs to update and adopt long-range transportation plans which conformed to ISTEA's metropolitan planning requirements. ISTEA's requirements emphasized multimodal transportation, a strong transportation/land use interrelationship and an expanded public involvement process. This process meshed well with East Central's long-established planning process.

In 1998, the Transportation Equity Act for the 21st Century (TEA-21) replaced ISTEA. The overall differences between the two included increased funding levels and a budgetary clause that guaranteed promised funding for transportation projects. In 2005, the Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) replaced TEA-21. SAFETEA-LU continued the commitment for multimodal transportation funding.

In 2012, the Moving Ahead for Progress in the 21st Century Act (MAP-21) replaced all prior transportation legislation. MAP-21 carries on with the principles established in previous legislation; however, its primary difference is the need for further performance measures and standards. Additional areas of challenge under MAP-21 include:

- improving safety;
- maintaining infrastructure condition:
- reducing traffic congestion;
- system reliability;
- freight movement and economic vitality;
- environmental sustainability; and
- reducing project delivery delays.

To carry out the comprehensive planning program, MAP-21 has reconfirmed the role of a cooperative planning institution, the MPO, to guarantee that all aspects of the Appleton (Fox Cities) Transportation Management Area (TMA) will be represented in the plan's development and that planning will be conducted on a continuing basis.

The vision, goals, and objectives pertinent to the long range planning process are as follows:

VISION

In 2050, the Appleton (Fox Cities) Transportation Management Area (TMA) will have a safe, efficient, and effective transportation network which provides options for the mobility needs of all people, goods, and services, while maximizing available resources, such as land, energy and finances.

TRANSPORTATION GOALS AND OBJECTIVES

To obtain this vision, the following transportation goals were defined:

- 1. **Integrated planning.** Integrate the transportation program with other functional elements of comprehensive planning in recognition of the fact that the primary objective of a transportation system is to connect centers of activity.
- 2. **Maximum system effectiveness for all residents.** Consider the capabilities and transportation preferences of all users and determine the relative effectiveness of various system alternatives.
- 3. An efficient transportation system. Provide an integrated transportation system that will meet short and long range needs and maximize the capabilities of all transportation modes including street and highway, rail and trucking facilities, public transportation, bicycle and pedestrian travel and air transportation.
- 4. **Safety.** Provide a safe transportation system throughout the region.
- 5. **Minimal environmental disruption.** Develop a transportation system that minimizes environmental disruption and maintains environmental quality.
- 6. **Compatibility with land use patterns.** Develop a transportation system compatible with existing and future land use patterns.
- 7. **Conservation of energy.** Provide a transportation system that promotes the conservation of energy resources.
- 8. **Performance Measures.** Develop and monitor relevant data sets to track the overall efficiency of the transportation system.
- 9. **Environmental Justice.** Ensure that access to transportation systems and the transportation planning process is available to all individuals, regardless of race or socioeconomic status.
- 10. **Coordination at all levels.** Coordination with local and state planning documents and programs.
- 11. **Complete Streets Policies.** Institute a Complete Streets policy to ensure consistent design and operation of the entire roadway with all users in mind including bicyclists, public transportation vehicles and riders and pedestrians of all ages and abilities.¹
- 12. **Sustainable and Livable Communities.** Foster the development of livable communities—places where coordinated transportation, housing, and commercial development give people access to affordable and environmentally sustainable transportation.²

² http://www.dot.gov/livability/101. (02-19-14)

Goal 1: Integrated Planning

Objectives

- A. The existing transportation system should be continually evaluated, deficiencies identified and solutions proposed in keeping with comprehensive planning goals and objectives.
- B. The transportation system should be planned in support of current land use and desired patterns of future development.
- C. All proposals and changes considered in the comprehensive planning program should be constructively reviewed in terms of their impact on the transportation system.
- D. Local citizens should be formally involved in the transportation planning process.
- E. Compatibility should be promoted among local, regional and state transportation policies and plans.
- F. Compatibility should be promoted between public and private transportation services.

Goal 2: Maximum System Effectiveness for All Residents

Objectives

- A. At least a minimum level of transportation should be provided to all persons residing in the region.
- B. Methodologies should be employed capable of comparing the effectiveness of investments in alternative transportation networks and modes.
- C. Subsidy programs should be considered to meet the needs of the economically disadvantaged.

Goal 3: An Efficient Transportation System

Highway Transportation

Ensure that appropriate levels of service for road transportation are provided to reduce congestion for the entire region.

- A. The highway system should be designed to adequately accommodate projected future highway travel growth and the potential modal choices necessary for the efficient movement of goods and people.
- B. Development of new or expanded highway corridors should only be considered after a determination that alternative transportation modes cannot address the need to:
 - 1. alleviate significant safety hazards;

- 2. relieve communities of heavy through-traffic burdens;
- 3. alleviate traffic congestion;
- 4. conserve energy in highway use;
- 5. stimulate economic development; and
- 6. provide a framework for future planned land use.
- C. A community's development plan should incorporate all proposed future principal and minor arterial streets within their existing and extraterritorial powers jurisdictions.
- D. Street and highway design standards should be based on functional class criteria set forth in WisDOT's *Design Manual*.
- E. Community development regulations allowing private streets should require right-of-way and design standards consistent with WisDOT's *Design Manual* for local streets.
- F. Adequate financial resources for upkeep and renewal of existing highways to prevent accelerated deterioration should be a high priority in the budgetary process.
- G. Low-cost improvements such as channelization, signalization and removal of parking should be the first measure considered to maintain an adequate level of service on highway facilities.
- H. Regulations concerning the use of highways should be strictly enforced, including those which prevent the deterioration of structures and the highway surface.
- I. Appropriate access control measures should be established for existing and future routes functionally classified or proposed as principal or minor arterials.
- J. Traffic control signals within the TMA should be coordinated or timed to facilitate the efficient flow of traffic.
- K. Future residential developments should be designed in a traditional street grid pattern to foster compact development and efficient delivery of essential residential services such as utilities, refuse removal and winter snow removal.

Freight Transportation

Ensure that appropriate types and levels of freight transportation services are provided to the entire region.

- A. Common-carrier truck service should be provided to all areas of the region.
- B. Efficient truck routing should be oriented to the freeway, expressway and high-level arterial network to facilitate truck traffic and to reduce conflicts with autos.
- C. Joint terminals and common pick-up and delivery services should be encouraged where efficient and practical for the transport companies concerned.

- D. The location of truck and rail terminals should be determined cooperatively by public and private interests.
- E. Existing rail service should be maintained according to standards set forth in the Wisconsin Rail Plan.
- F. Air freight service should be provided at all metropolitan and regional centers.

Public Transportation

Expand public transportation choices to provide a competitive mode of transportation.

Objectives:

- A. Local governments should recognize public transportation as a basic public service.
- B. Public transportation should be provided in all urban areas using delivery systems appropriate to the density of development. Delivery systems include both fixed-route and demand-responsive services employing various sized buses, vans and taxis for the appropriate customers.
- C. Local governments should promote land use patterns and compact site design standards which can be efficiently served by public transportation.
- D. Public transportation should be related to travel patterns within an urban area.
- E. At a minimum, public transportation should meet the mobility needs of the transit dependent.
- F. Public transportation should provide a level of service that is safe, convenient, comfortable and affordable.
- G. Funding and organizational mechanisms for public transportation should be based on principles of equity and reflect the interconnectivity of jurisdictions within an urban area.
- H. Public transportation should strive to meet the service, performance, management and marketing standards determined for a given urban area.
- I. Transportation services within an urban area should be coordinated to increase efficiency and avoid overlap and duplication of service. Coordination should encompass public and private transportation services and include such travel demand management programs as ridesharing, employee van pools, subsidized transit passes, and park and ride lots.
- J. Intercity public transportation should serve all populous areas of the region.

Bicycle and Pedestrian Travel

Make travel by foot or bicycle a safe, convenient, and attractive alternative to motorized travel by providing adequate accommodations, education and enforcement, and proposing more compact land use patterns.

Objectives:

- A. A network of suitable on and off-road routes should be developed which provide linkages between important origins and destinations and interconnect with other modes of transportation both locally and regionally.
- B. Conflicts between motor vehicles and bicycles and pedestrians should be minimized.
- C. Bicycle and pedestrian related improvements should be integrated into the planning, design, and construction of all appropriate highway and street improvement projects.
- D. Facilities and amenities which make bicycling and walking more attractive alternatives to the motor vehicle should be provided at destinations.
- E. Actions, activities and incentives which encourage increased walking and bicycling for transportation purposes should be promoted.
- F. Efforts to increase community awareness of bicycle and pedestrian safety issues should be undertaken.
- G. Enforcement of "rules of the road" which pertain to safe bicycling and walking should be increased.
- H. Efforts to alert motorists to the presence of bicyclists and pedestrians on designated routes should be undertaken.
- I. Compact and mixed land uses should be encouraged to increase opportunities for bicycling and walking.
- J. New development should be encouraged to integrate the bicycle and pedestrian modes of transportation.
- K. Natural and man-made corridors should be utilized for bicycle/pedestrian trails.

Air Transportation

Provide and maintain a safe air transportation system to meet travel and freight service demands.

- A. An airport system should be maintained to provide an adequate level of service to existing and anticipated patterns of development, especially areas of population concentration and activities which generate significant travel demands throughout the region.
- B. Each airport in the region should be designed to conform to the standards and provide the type of service indicated by its classification in the Wisconsin Airport Systems Plan.
- C. Master plans should be prepared for all airports in the region included in the Wisconsin Airport System plan.

- D. A zoning ordinance should be adopted for every airport in the region to ensure compatible uses adjacent to each airport.
- E. Airports should cause minimal disruption of the environment and natural resource base.
- F. Noise exposure forecast criteria should be considered when developing areas surrounding airports.
- G. Priority should be given to maintaining existing airport facilities in a safe condition before constructing new facilities.
- H. The airport system should be integrated with other major transportation modes.
- I. Adequate public transportation should be provided between the airport and the central city.
- J. Adequate parking areas should be maintained at all airports in the region.

Passenger Rail

Encourage the implementation of the Midwest Rail Initiative as it applies to passenger rail service.

Objectives:

- A. Local government should participate in the implementation of the Midwest Rail Initiative.
- B. A future passenger rail system should be integrated with freight rail service infrastructure and supported by adequate parking and passenger facilities.

Water Transportation

Maintain the ability to safely serve recreational, commercial, and industrial travel needs on area waterways.

Objectives:

- A. Local government should coordinate with pertinent enforcement agencies to keep river travel safe.
- B. Bridge openings should cause minimal disruption to bridge traffic.

Goal 4: Safety

- A. The level of access control should be appropriate to the function of the highway.
- B. Vehicle conflicts should be reduced through roadway and intersection design appropriate for the desired level of service.
- C. Accident-producing facility deficiencies should be accorded a high priority for correction.

- D. Design standards should be adequate for the legal speeds, sizes, and weights of vehicles.
- E. Appropriate marking, signing, and protection devices should be installed where justified by design, speed and accident exposure rates.
- F. Safe speed limits and laws dealing with drunk driving should be strictly enforced and new strategies for dealing with these problems should be explored.
- G. The strictest possible safety regulations should be employed near transportation-related construction sites.
- H. Driver education programs should be designed not only to train new drivers but also to improve the techniques of present drivers.
- I. Educational programs should be expanded to include pedestrian, motorcycle and bicycle safety and the safe use of public transportation.
- J. Railway and highway grade crossings should be eliminated in high traffic areas and properly signalized in other areas.
- K. Harbors and other navigable waters should be clearly marked and lighted where appropriate.
- L. To ensure safe movement of hazardous material, infrastructure improvements should conform to guidelines set by local emergency services and state and federal regulations.

Goal 5: Minimal Environmental Disruption

- A. Required federal and state environmental impact statements and assessments for transportation facilities should be carefully reviewed on the local and regional levels.
- B. Care should be taken to protect historic or visually pleasing buildings and scenic, historic, scientific and cultural sites when constructing new or improving existing transportation facilities.
- C. The location of roadways through environmentally sensitive areas should be minimized.
- D. Transportation facilities should be designed to be aesthetically pleasing and sensitive to the natural landscape, incorporating such amenities as boulevards, berms and attractive landscaping on major arterials in urban areas and minimizing unsightly views such as junkyards, billboards, and strip commercial development in more rural areas.
- E. Natural vegetation should be encouraged along roadsides to protect wildlife, reduce the use of herbicides, cut maintenance costs and help alleviate air and noise pollution.
- F. Transportation facilities should be located and designed to minimized exposure of people to harmful and/or annoying air, water or noise pollution levels.

- G. Air pollution should be minimized through efficient traffic control measures and through encouragement of transit, bicycle and pedestrian travel.
- H. Air quality should be monitored to ensure that motor vehicles, including air and water craft, do not exceed the exhaust emission standards set by the Environmental Protection Agency.
- All transport related sewerage and other facilities should be constructed and maintained so that their contribution to water pollution will be minimized and will meet appropriate water quality standards.
- J. Natural water depths should be used to the maximum extent possible to avoid unnecessary dredging. Where dredging is necessary, disposal sites should be planned and located consistent with state solid waste disposal regulations and/or disposed of in a nuisance-free and aesthetic manner.
- K. National noise standards should be used to ensure that residential areas, schools, or other places with high concentrations of people are not exposed to harmful levels of noise from transportation facilities.

Goal 6: Compatibility with Land Use Patterns

- A. The proper use of land for and adjacent to highways should be maximized by coordinating street and highway planning with land development.
- B. The relative accessibility provided by the highway system should be adapted to comprehensive plans by providing a higher level of accessibility to areas where development is to be encouraged.
- C. The total amount of land used for roadways should be minimized and multiple uses of right-ofways should be encouraged.
- D. The disruption and dislocation of neighborhoods, households, businesses, industries and public and institutional buildings by construction of new or reconstruction of existing transportation facilities should be minimized.
- E. Development of neighborhood units by arterial streets and highways should be avoided except where it can be demonstrated that the proposed location and design will improve the ability of the area to function effectively.
- F. Location of new or relocation of existing transportation facilities in or through recreational facilities and historic, scenic or cultural sites should be avoided wherever possible.
- G. When constructing or improving roadways, prime farmland should be preserved wherever possible.
- H. Transportation facilities should be designed to promote compact development. New transportation facilities should not be extended for new subdivisions until existing subdivisions are fully developed.

I. Right-of-ways for proposed transportation facilities should be reserved to minimize disruption of future development.

Goal 7: Conservation of Energy

Objectives

- A. Local governments should develop transportation policies to conserve transportation energy and meet contingency situations in case of fuel shortfalls.
- B. Development patterns that reduce the need to travel should be promoted.
- C. Interruptions in traffic flow should be minimized.
- D. Highway facilities should be routed to provide the shortest travel paths for the greatest number of trips.
- E. Bypasses of urbanized areas should be constructed where serious traffic congestion can be alleviated.
- F. Highway facilities should be designed and maintained to conserve energy. This includes providing smooth pavements and the elimination of steep grades and sharp curves.
- G. The use of ride sharing and mass transportation should be encouraged.
- H. The most energy efficient methods of construction and maintenance should be identified and applied.
- I. Efforts to improve energy conservation through improved fuel efficiency of vehicles and through educational programs on better driving and travel habits should be pursued.

Goal 8: Performance Measures

- A. Performance measures and targets should be monitored, tracked and integrated into the LRTP.
- B. Both motorized and non-motorized transportation modes should be monitored by performance measures.
- C. Other performance measures to track should include (but are not limited to) the urban and rural road network, public transportation, rail and bridge sufficiency ratings, air quality, nonrecurring incidents, and WisDOT's MAPSS (Mobility, Accountability, Preservation, Safety and Service) performance measures.

Goal 9: Environmental Justice

Objectives

- A. Efforts to include all individuals such as elected officials, transportation officials and other decision makers (healthcare, school districts, economic development, etc.) in the planning process should be made including utilizing all available forms of media and methods.
- B. ECWRPC's Public Participation Plan (PPP) should be referenced to encourage and monitor participation of all citizens in the MPO planning boundaries.

Goal 10: Coordination at All Levels

Objectives

- A. Efforts to ensure consistency with WisDOT's Connections 2030 State Long Range Transportation Plan and relevant municipal transportation and comprehensive plans should be reviewed and incorporated into this planning process.
- B. Consistency with WisDOT's MAPSS performance measures should be reviewed and incorporated into this planning process.

Goal 11: Complete Streets Policies

Objectives

- A. Transportation planners, engineers and municipalities should be cognizant of designing transportation systems that take into consideration all modes of travels and abilities of users.
- B. Elected officials, transportation officials and other decision makers (healthcare, school districts, economic development, etc.) should recognize the interconnectedness of safety, health and economic vitality in the role of building a reliable transportation network.³
- C. Work with and foster the development of complete streets policies with local municipalities.

Goal 12: Sustainable and Livable Communities

- A. Implementation of the U.S. DOT's livability principles should be incorporated into the MPO planning process.
- B. The six livability principles are defined by the U.S. DOT:
 - Provide more transportation choices to decrease household transportation costs, reduce our dependence on oil, improve air quality and promote public health.

³ http://www.smartgrowthamerica.org/complete-streets/a-to-z. (02-19-14)

- Expand location- and energy-efficient housing choices for people of all ages, incomes, races and ethnicities to increase mobility and lower the combined cost of housing and transportation.
- 3. **Improve economic competitiveness of neighborhoods** by giving people reliable access to employment centers, educational opportunities, services and other basic needs.
- 4. **Target federal funding toward existing communities** through transitoriented and land recycling – to revitalize communities, reduce public works costs, and safeguard rural landscapes.
- 5. **Align federal policies and funding** to remove barriers to collaboration, leverage funding and increase the effectiveness of programs to plan for future growth.
- 6. Enhance the unique characteristics of all communities by investing in healthy, safe and walkable neighborhoods, whether rural, urban or suburban.⁴

LAND USE

The goals assembled pertaining to land use intend to encourage efficient, orderly, and planned land use development patterns consistent with sound environmental management practices. The land use element provides direction and integrates four sub-element functional plans which have direct impacts on future land use. These functional areas are Growth Management, Urban Service Delivery, Environmental Resources, and Open Space.

Like the transportation objectives, the primary intent of the land use objectives is to guide land use decisions, particularly in terms of sewer service area actions. A secondary use of these objectives falls within the planning process itself.

LAND USE GOALS AND OBJECTIVES

The following sub-elements and goals were defined:

- 1. **Growth Management.** Encourage an orderly and planned pattern of community growth and development.
- 2. **Urban Service Delivery.** Promote urban services in an efficient, environmentally sound, and socially responsible manner.
- 3. **Environmental Resources.** Protect the environment and manage natural resources in an ecologically sound manner.
- 4. **Open Space.** Provide sufficient public open space to meet the recreational needs of all residents and protect and preserve natural and cultural resources.

⁴ http://www.dot.gov/livability/101. (02-19-14)

Goal 1: Growth Management

Land Allocation

Promote balanced allocation of land areas to accommodate current and future urban development needs.

Objectives:

- A. The supply of land allocated for urban development should approximate the current and future needs as determined from population, employment and land use projections which have been developed in conjunction with adopted comprehensive or urban service area plans.
- B. New urban development patterns should incorporate planned areas of mixed use and density neighborhoods that are clustered and compatible with adjacent uses.
- C. Work places, shopping centers, recreational facilities, and community facilities should be located to provide a mix of land uses for improved accessibility for residents.
- D. Urban designs with higher density land use alternatives should be promoted.

Land Use Standards

Promote planned urban communities which contain centralized, compact, contiguous and compatible urban development patterns.

- A. Vacant developable lands within existing urban areas should first be infilled, then development staged outward from the existing development limits.
- B. New subdivision development should be encouraged within existing urbanized areas or as an expansion of existing urban areas concurrent with the provision of necessary facilities and services.
- C. The expansion of major commercial and industrial land use activities should be adjacent to existing areas or in areas designated for such development in adopted comprehensive plans.
- D. Natural and man-made features, such as ridge lines, streams and major highways, should be considered in the expansion and staging of urban development.
- E. Urban development should only take place in designated urban service areas.
- F. Community development plans should be coordinated in multijurisdictional urban areas.
- G. Urban sprawl in the form of unplanned development which is non-contiguous, low density scattered and inefficiently served should be discouraged.
- H. Development and redevelopment of land parcels should consider a mix of uses and functions.

Development

Promote urban development which protects environmentally sensitive areas and is compatible with the natural resource base.

Objectives:

- A. Urban development should be directed to suitable land and discouraged on unsuitable land, such as floodplains, wetlands, prime agricultural soils, areas of high bedrock and groundwater, steep slopes, prime wildlife habitat, unique scientific areas and areas of historical or archeological significance.
- B. The development of environmentally sensitive areas should be discouraged.
- C. Adverse development impacts to surface water and groundwater should be mitigated.
- D. Designs and plans for new development should preserve open spaces for public use, complement the existing landscape, and conserve energy and natural resources.
- E. Land reclamation should be required following extractive operations or other uses which significantly alter the land surface.
- F. Urban redevelopment activities should weigh environmental, health and safety factors against associated costs and benefits.

Feasibility

Promote efficient and cost-effective development in urban growth areas.

- Urban development should be encouraged at densities adequate to sustain reasonable urban service costs.
- B. Urban development should occur in areas served by adequate public facilities and services.
- C. A variety of types, prices and locations of housing should be provided to promote convenience, choice and affordability.
- D. Development patterns and site designs that support multimodal transportation should be encouraged.
- E. Major commercial and industrial areas should be provided with readily accessible major transportation systems.
- F. Community comprehensive plans should be adopted prior to the extension of urban services.

Preservation

Preserve rural land uses by requiring planning which considers water and sanitary sewer adequacy.

Objectives:

- A. Agricultural and open space characteristics of rural areas should be preserved.
- B. Rural development should be limited to land with suitable physical characteristics and soils supporting conventional on-site sewage treatment systems.
- C. Rural residential housing should be limited to dependent single lot use in agriculture and open space areas.
- D. Rural subdivision development should be limited to areas which do not negatively impact agricultural or open space uses and the provision of public services.
- E. Rural subdivision development should be restricted in urban planning areas until long-term urban services are provided.

Existing Infrastructure

Encourage development in areas that are served by existing transportation infrastructure.

Objectives:

- A. Infill development and redevelopment projects should be promoted in order to avoid the need for extension of transportation infrastructure and service.
- B. Design standards for infill should be given different consideration for transportation/traffic requirements compared to "greenfield" development.

Goal 2: Urban Service Delivery

Public Facilities

Provide efficient, economical, and equitable public facilities and services to urban development.

- A. The use of existing public facilities and services should be maximized in the allocation of future urban growth.
- B. Design of new and upgraded transportation and utility facilities with capacities sufficient to respond to existing demand levels and to the additional demand generated by planned development should be encouraged.
- C. A full range of essential urban services and facilities should be provided to urban development areas.

- D. The costs of providing urban services should be minimized through higher density development.
- E. Major infrastructure extensions should be staged to coincide with community growth rates.
- F. Utilities serving individual developments should be extended consistent with community water and wastewater system plans.
- G. Provision of public facilities and services should be coordinated with the location and timing of new development.

Cooperation and Coordination

Provide services where efficiency, equity, and economies of scale can be obtained through cooperation and coordination.

Objectives:

- A. Overlapping urban service areas, facility and system capacities and service capabilities should be discouraged.
- B. The proliferation of major public infrastructure facilities that duplicate services should be discouraged.
- C. Inter-municipal agreements should be promoted for the provision of joint service.
- D. More uniform facility design and service standards should be encouraged for multiple jurisdiction development areas.

Goal 3: Environmental Resources

Water Resources

Improve and protect surface and groundwater quality.

- A. The quality and supply of groundwater should be protected as the principal source of water supply and water conservation programs should be encouraged.
- B. The use of natural drainage patterns and measures should be promoted to enhance water quality.
- C. Wetlands should be preserved as an essential component of the hydrologic system.
- D. The risk of groundwater contamination should be reduced in aguifer recharge areas.
- E. Lakeshore and stream bank erosion should be minimized.
- F. Construction site erosion should be controlled and urban stormwater runoff reduced.

- G. Non-point source pollution abatement programs should be supported.
- H. The adverse water quality impacts of agricultural runoff should be minimized.

Air Quality

Improve or maintain high air quality throughout east central Wisconsin.

Objectives:

- A. Air pollution abatement programs and air quality regulations should be supported.
- B. Geographically coordinated abatement strategies should be encouraged.
- C. The public should be provided with information on air quality programs and specific air quality problems.
- D. The increased use of transportation modes that are more efficient and environmentally sound than the private automobile should be encouraged.
- E. Noise pollution should be reduced and noise sources isolated.

Environmental Areas and Corridors

Preserve and protect environmentally sensitive areas and promote the linkage of these areas into environmental corridors.

Objectives:

- A. The natural environment should be recognized as an integrated system of interacting and finite land, water and air resources that protect the health and stability of the entire ecosystem.
- B. Shoreland, floodplain and wetland areas should be protected as essential components of the hydrologic system and their scenic and recreational value preserved.
- C. The disturbance of environmentally sensitive areas by utilities and transportation facilities construction should be minimized.
- D. Critical natural areas should be preserved and protected from development and other adverse impacts.
- E. Adjacent land uses which adversely impact sensitive areas should be restricted or mitigated.
- F. The interrelationship of adjacent landscape types should be recognized to avoid dividing the natural units or breaking important linkages.

Ecosystems

Manage wildlife and wildlife habitat in a manner that maintains ecological stability and diversity, and considers social and economic impacts.

Objectives:

- A. The diversity and population of plant and wildlife species should be maintained and increased.
- B. Critical habitat areas for endangered and rare species should be preserved and enhanced.
- C. Wildlife habitat such as fencerows, woodlots and natural areas should be protected and expanded.
- D. Adequate public access to hunting and fishing areas should be provided.
- E. Responsible public use of private land should be encouraged.
- F. Wildlife and plant populations should be managed in ways that do not impose undue financial loss to individual property owners.
- G. Plant and animal preserves used specifically for educational and observational purposes should be maintained and expanded.

Agriculture

Preserve land suitable for the production of food and fiber to meet present and future needs.

Objectives:

- A. Land best suited for agriculture or forestry should be preserved for these uses or in other uses which enable the land to be readily converted to agricultural or forestry production.
- B. Ecologically sound and economically feasible farm and forestry management practices which preserve soil productivity and minimize soil loss should be encouraged.
- C. Soil should be recognized as one of the basic and most important resources and programs to preserve and improve productivity and wise use consistent with soil capability should be developed and promoted.

Waste Removal

Employ a comprehensive management approach for solid and organic wastes.

- A. The amount of solid waste generated by households, business and industry should be reduced.
- B. Solid waste should be recycled as an alternative raw material for construction, manufacturing, and energy production.
- C. Organic wastes should be used as soil amendments.
- D. Waste disposal operations and facilities should be centralized where economically feasible.

- E. Cost-effective waste management systems should be provided that are consistent with development and water and air quality regulations.
- F. On-site waste disposal systems should be managed to minimize adverse land use, environmental, and public health impacts.
- G. Health threats from toxic substances in the environment should be reduced.

Goal 5: Open Space

Recreation

Provide all area residents an opportunity to partake in a wide range of active and passive recreational activities on a year-round basis.

Objectives:

- A. Recreational facilities should be provided to address the level of activity participation, facility deficiencies and aesthetic needs of the community.
- B. Park sites should be developed to fully serve the local and area wide needs of the community.
- C. Safe, convenient and adequate access to all parks and recreation areas should be provided.

Heritage

Preserve areas of unique natural, historical, and cultural significance or unusual beauty for public use and enjoyment.

Obiectives:

- A. All significance preservation areas should be identified and mapped.
- B. Unique areas should be protected by minimizing the impact of individual development proposals.
- C. Significant natural areas should be preserved as public open space.
- D. Public access and use within environmental corridors and drainage ways should be promoted.

Future Open Space

Plan for future development of open space and recreational needs of the urban area.

Objectives:

A. All municipalities should be encouraged to participate in the development of comprehensive park and open space plans.

- B. Opportunities should be identified for developing a network of recreational trails along highly attractive environmental corridors, natural waterways, and transportation rights-of-way to link major recreational facilities and residential areas.
- C. Coordination between neighboring jurisdictions should be facilitated for development of parks and recreation facilities and linkages.
- D. Future parks and open space areas should be preserved so that suitable and adequate land will be available to provide active and passive recreational opportunities as growth occurs.

Cost

Provide recreational opportunities in a cost-effective manner.

Objectives:

- A. Facilities should be developed which can provide multi-seasonal recreational opportunities.
- B. The use of existing recreational facilities should be optimized.
- C. Duplicative recreational facilities and programs should be avoided.
- D. Grants and funding assistance should be maximized in the acquisition and development of recreational facilities.
- E. Municipalities and school districts should be encouraged to cooperate in the development of community recreational and playground facilities.
- F. The development of the county park system should be encouraged to complement recreational opportunities available in local parks.
- G. Municipalities should be encouraged to establish capital funding and other parkland dedication methods to provide for future recreational needs.

Opportunities

Make individual communities, and the region as a whole, a more attractive place to live, work, and play.

Objectives:

- A. Scenic areas should be preserved and landscaping and other site development requirements strengthened to promote community beautification.
- B. Additional billboard proliferation should be prevented, their placement controlled and a phaseout program promoted.
- C. Community tree planting programs on street terraces and public areas should be promoted.

D.	Waterfront areas should be preserved and redeveloped to promote greater public recreational
	use.

Scenic easements to protect important viewsheds should be acquired.

CHAPTER 6: STREET AND HIGHWAY NETWORK

INTRODUCTION

This section assesses the existing conditions of the street and highway network of the Appleton (Fox Cities) TMA. The existing street and highway network in the urban area has generally kept pace with growth in population, employment, and the significant increase in auto trips. This general pattern of increasing auto trips has been the norm for decades most notably starting in the post-World War II era.

While the growth in population has been modest, traffic volumes have increased. In this sense, the Appleton (Fox Cities) TMA reflects the national trend, which is based on a number of factors. Vehicle ownership has continued to increase. This is largely a result of an increasing incidence of two career families. In addition to necessitating two vehicles for work trips, it creates a residual need for teens to be responsible for much of their own trip making, frequently resulting in a third, or fourth vehicle in the household.

Another factor which has contributed to the increase in vehicle use is the dispersion of land uses. Unlike the compact, mixed use neighborhood development characteristic of pre-1960 development, residential development is now more commonly on larger lots in subdivisions which are solely residential in nature, and likely miles from employment centers and shopping. The lower density development reduces the efficiency and effectiveness of public transit and produces trip lengths which are not conducive to bicycle and pedestrian modes. Many of these areas also do not have facilities to safely serve bicycle or pedestrian travel modes. The end result is more, longer trips, reflected in the increase in the statistic of Vehicles Miles Traveled (VMT). As the population of the Appleton (Fox Cities) TMA continues to grow, it will be important to consider all modes of transportation for the system.

PRESERVATION

The Appleton (Fox Cities) TMA is not only working to accommodate growing traffic needs through expansion, but also to preserve the current transportation network to ensure a safe and efficient system. Preservation is becoming a greater issue as the entire transportation system grows older and funding becomes tighter. The TMA is working to strengthen and preserve the overall transportation system through sound planning principles.

The transportation network in Calumet, Outagamie and Winnebago counties offers the foundation for movement of goods and people into, out of, through and within the tri-county region. An efficient transportation system is crucial for emergency service and evacuation. Major corridors within the tri-county region consist of U.S. Highways 10, 151, 441, 41, and 45 and State Highways 15, 21, 26, 44, 47, 55, 76, 110, 114 and 116. U.S. Highway 41, State Route 55 and 76 provide north/south movement between Milwaukee and Green Bay. East/west movement across the three county region is inhibited by Lake Winnebago, but is intact within each county. U.S. Highway 10 provides an east/west route through Outagamie and Calumet Counties. State Route 114 and 151 provide east/west route in Calumet County and U.S. Highway 45 in Winnebago County. For context, **Map 6-1** provides the Calumet County Rural Functional Classification System of Roads; **Map 6-2** provides the Winnebago County Rural Functional Classification System of Roads; **Map 6-3** provides the Winnebago County Rural

Functional Classification System of Roads; and **Map 6-4** provides the Appleton (Fox Cities) TMA Urbanized Functional Classification System of Roads.

SAFETY

The goal of the Appleton (Fox Cities) TMA is to reduce the potential for traffic accidents and provide for safe and secure transportation of goods and people through and within the region, thus safety is an important aspect of the LRTP.

According to the Insurance Institute for Highway Safety (IIHS), 32,367 Americans were killed in traffic crashes in 2011. In 2012 WisDOT reported that 601 persons were killed and 39,370 persons were injured in crashes throughout the State of Wisconsin. The figures pertaining to persons killed do not include alternative modes fatalities. The transportation planning process can play a key role in reducing crashes through the identification of safety issues and common challenges.

By including all aspects of transportation safety in the planning process, engineering, education, enforcement, and emergency medical response, units of government are able to make safer and more efficient transportation improvement choices. It is also important to examine safety on a comprehensive scale by including all forms of transportation (automobile, transit, bicycle, pedestrian and rail) and how they interact system-wide. By examining current conditions and trends, future hazards and incidents can be reduced, if not prevented.

The Appleton (Fox Cities) TMA recognizes the importance of safety within the planning process and has conducted an in-depth analysis of multimodal crashes throughout the TMA to assist in the transportation decision-making process. By examining and understanding the crash data and incorporating safety conscious planning, the Appleton (Fox Cities) TMA can identify safety issues, common challenges and ways to over-come them, which will result in a safer system for all users.

The Appleton (Fox Cities) TMA collected crash locations data from January 1, 2005 – December 31, 2013. The data was aggregated to produce a crash density map of all reported crashes (includes vehicular, bicycle and pedestrian related crashes). The crash data was provided by the Wisconsin Traffic Operations and Safety Laboratory (TOPS) which is part of the University of Wisconsin College of Engineering. TOPS works closely with WisDOT to collect, analyze and share crash data for the state of Wisconsin.

Staff used GIS (geographic information systems) software to compile the crash data for the Oshkosh Urbanized Area. A GIS model was created to produce a "crash density" map. The basic GIS methodology involved the following generalized processes:

- Used road centerline files of the regional transportation network to locate all road intersections within the MPO planning area.
- Created a 100 foot buffer zone around all bridge data and "erased" intersections that were located on bridges (this was done to make sure that only true road intersections were considered and that more intersections were not created than truly exist).

http://www.iihs.org/iihs/topics/t/general-statistics/fatalityfacts/overview-of-fatality-facts. (02/28/14)

² http://www.dot.wisconsin.gov/safety/motorist/crashfacts/docs/crash-general.pdf. (02/28/14)

- Applied a spatial join of the TOPs crash data to the buffered intersections data layer to visualize non-spatial data attributes in a spatial "map" format.
- Used GIS density tools (Kernel Density and Raster Calculator to convert data into square miles) to produce final map product.

Map 6-5 displays the crash data for the Appleton (Fox Cities) TMA; classified from low crash density to high crash density. A note on the density calculation: the GIS density calculations should be viewed "qualitatively" in the sense that darker (red areas) are higher crash areas and lighter (green areas) are lower crash areas relative to the overall crash data. Red areas mean that relative to the region as a whole, these areas have more crashes compared to the total average number of crashes; green areas mean that relative to the region as a whole, these areas have fewer crashes compared to the total average number of crashes from 2005 to 2013.

High crash areas include (major corridors):

- USH 41 interchanges through the entire Fox Cities
- STH 10/STH 441 interchanges through the entire Fox Cities
- STH 47 corridor
- STH 96 corridor
- HWY 125/CTY CA/College Avenue
- CTH OO/Northland Avenue

Staff will continue to collect and analyze crash information for intersections and roadways throughout the Appleton (Fox Cities) TMA and present this information to committee members and decision-makers. This information will be used to determine and identify high-risk areas so decision-makers can develop solutions to reduce incidents.

SUSTAINABILITY / LIVABILITY

Sustainability and livability are different concepts, but can coexist together. The concept of sustainability implies the capacity to endure while livability refers to the suitability of the human environment. Together they refer to a suitable human environment that can endure. In transportation planning this means creating a transportation network that adequately accommodates all users while enduring in the human environment. Sustainability and livability are two concepts that the Appleton (Fox Cities) TMA recognizes and will work to incorporate both into the long range planning process.

COMPLETE STREETS

"Complete Streets" concepts are an approach to design roads that accommodate all users including bicyclist, pedestrians, mass transit, persons with disabilities, the elderly, motorists, freight providers, and emergency responders. These policies also look at existing and future land use and users that use the surrounding land. These concepts attempt to create a safe, accessible and connected transportation network for all modes and users. Reference to "Complete Streets" concepts is included in federal and state law. Federal law (23 U.S.C. Section 217 (g)) details the planning and design of bicycle and pedestrian facilities in coordination with transportation projects:

(g) Planning and Design.—

- (1) In general.— Bicyclists and pedestrians shall be given due consideration in the comprehensive transportation plans developed by each metropolitan planning organization and state in accordance with sections 134 and 135, respectively. Bicycle transportation facilities and pedestrian walkways shall be considered, where appropriate, in conjunction with all new construction and reconstruction of transportation facilities, except where bicycle and pedestrian use are not permitted.
- **(2) Safety considerations.—** Transportation plans and projects shall provide due consideration for safety and contiguous routes for bicyclists and pedestrians. Safety considerations shall include the installation, where appropriate, and maintenance of audible traffic signals and audible signs at street crossings.³

State law states that the state department of transportation shall ensure that bike and pedestrian ways are established in all new highway construction and reconstruction projects funded in whole or in part from state funds or federal funds appropriated under s. 20.395 or 20.866 (Chapter Trans 75, Bikeways and Sidewalks in Highway Projects)⁴. Exceptions to these rules are the following:

- Bicyclist or pedestrians are prohibited by law from using the highway that is the subject of the project.
- The cost of establishing bikeways or walkways would be excessively disproportionate to the need or probable use of the bikeways or pedestrian ways. For purposes of this subdivision, cost is excessively disproportionate if it exceeds 20 percent of the total project cost.
- Establishing bike or pedestrian ways would have excessive negative impacts in a constrained environment.
- There is an absence of need for the bikeways or pedestrian ways, as indicated by sparsity of population, traffic volume, or other factors.
- The community where bike and pedestrian ways are to be located refuses to accept an agreement to maintain them.

The Appleton (Fox Cities) TMA supports "Complete Streets" through their goals, objectives and policies. The MPO also uses the components of the "Complete Streets" approach by including safety, multimodalism, and capacity as a criterion when selecting transportation projects for federal funding as part of the Transportation Improvement Program (TIP). The City of Appleton, City of Menasha, Town of Menasha, and the City of Neenah are planning to connect these communities with bicycle and pedestrian accommodations along the WIS 47 (Appleton Road) corridor. Currently, there are sections of this corridor that could benefit from a road diet, or retrofit sections with multi-use trails and sidewalks.

STREET AND HIGHWAY NETWORK PERFORMANCE MEASURES

Pavement Surface Evaluation and Rating System (PASER)

Pavement Surface Evaluation and Rating System (PASER) is a visual survey method used to rate the condition of the roads through the condition of various types of pavement distress on a scale of 1-10. PASER uses 10 separate ratings with 1 being the worst and 10 being a newly constructed road. PASER measures the distress of a pavement's surface. This method is based upon sound engineering principles.

Routine Maintenance

Roads with PASER of 8, 9 and 10 require routine maintenance. Routine Maintenance is the day-to-day, regularly-scheduled activities to prevent wear and tear on the roadway surface. This includes street sweeping, ditch maintenance, gravel shoulder grading, and crack sealing. This category also includes roads that are newly constructed or recently seal-coated and require little or no maintenance.

Capital Preventive Maintenance

PASER ratings 5, 6, and 7 are included in this category. Capital preventive maintenance (CPM) is at the heart of asset management. It is the planned set of cost effective treatments to an existing roadway that retards further deterioration and maintains or improves the functional condition of the system without significantly increasing the structural capacity. The purpose of CPM is to protect the pavement structure; slow the rate of deterioration; and/or correct pavement surface deficiencies. Roads in this category still show good structural support but the surface is starting to deteriorate. CPM is intended to address pavement problems before the structural integrity of the pavement has been severely impacted.

Structural Improvements

Roads with a PASER rating of 1, 2, 3, or 4 are in need of some type of structural improvement such as resurfacing or major reconstruction. Rutting is beginning to take place. Alligator cracking is evident.

Appleton (Fox Cities) TMA PASER Data

PASER data is collected by local municipalities every two years and submitted to WisDOT, who compiles and inputs the data into the Wisconsin Information System for Local Roads (WISLR) web based software and database. **Figure 6-1** is a compilation of the Appleton (Fox Cities) TMA PASER data from 2005, 2007, 2009, 2011 and 2013. **Table 6-1** also displays the same data. Collecting and comparing PASER data from one year to the next allows the TMA to gauge how the transportation system as whole changes over time. Ratings 1-4 decreased 1.29 percent, ratings 5-7 increased 1.42 percent and ratings 8-10 decreased 0.13 percent from 2005 to 2013. The TMA is experiencing a shift from "good" and "poor" to "fair" paved roads. The shift is slight, but should be noted.

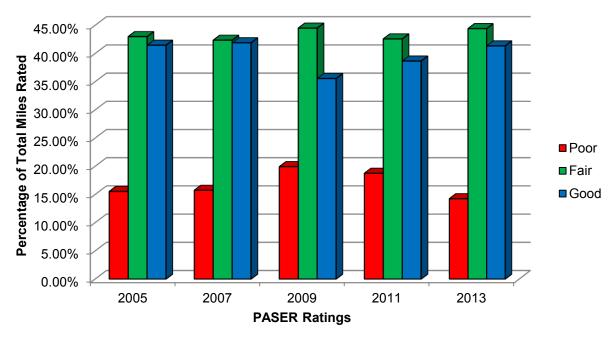

Figure 6-1: Appleton (Fox Cities) TMA PASER Paved Roads 2005-2013

Source: 2005, 2007, 2009, 2011, 2013 WisDOT WISLR data

Table 6-1: Appleton (Fox Cities)
TMA PASER Paved Roads 2005-2013

	2005	2007	2009	2011	2013
Poor	15.54%	15.75%	19.93%	18.76%	14.25%
Fair	42.99%	42.36%	44.50%	42.59%	44.41%
Good	41.47%	41.90%	35.57%	38.66%	41.34%
Total	100.00%	100.00%	100.00%	100.00%	100.00%

Source: 2005, 2007, 2009, 2011, 2013 WisDOT WISLR data

Maps 6-6 – 6-10 display 2005, 2007, 2009, 2011 and 2013 PASER data. Ratings 1-4 are identified in red and represent "poor" roads that require structural improvements. Ratings 5-7 are identified in green and represent "fair" roads that require capital preventative maintenance. Finally the ratings 8-10 are identified in blue and represent "good" roads that require routine maintenance. The map allows the MPO to visualize the system in its entirety and identify those areas that are in need of repairs.

Pavement Condition Index (PCI)5

Pavement Condition Index Background

The Pavement Condition Index (PCI) method of pavement condition rating was developed in the 1970s by the US Army Corps of Engineers. The PCI method has gained nationwide acceptance due to its ability to provide an objective and repeatable rating system. Agencies supporting the PCI method include the US Department of Defense, the American Public Works Association,

⁵ Wisconsin Department of Transportation. (04/07/14)

the Federal Aviation Administration, and many others. ASTM standards for the PCI method have been published for both airfield and roadway pavement.

Benefits of the Pavement Condition Index

In addition to the rating index, the PCI method offers much more than a numerical index of condition. The distress type, severity, and quantity information that drives the PCI calculation provides pavement engineers with detailed data that identifies the pavement dynamics, or mechanism of distress, occurring in the pavement. With this data, cost-effective alternatives for maintenance and rehabilitation can be determined.

WisDOT asset managers have continued to increase their reliance on data-driven decision making mechanisms including the rigorous use of pavement condition data for programming and planning purposes. The Bureau of State Highway Programs requires more robust pavement data to support both existing and long-term asset management needs. To meet this need, the PCI method was chosen for its comprehensive design and long-standing proven track record. It is an excellent resource for determining existing condition, forecasting future condition and determining cost-effective maintenance and improvement strategies. Replacement of the pavement data collection van in 2008 provided an ideal opportunity to upgrade WisDOT's pavement data and rating procedures.

The Pavement Condition Index Method

A PCI is calculated based on the results of a detailed pavement distress survey that identifies pavement distress type, distress severity, and distress quantity. The PCI is a numerical rating that ranges from 0 for a totally failed pavement to 100 for a pavement in perfect condition. The PCI index is a robust and proven index that is proportional to pavement condition. For example, PCI ratings (numeric) can be consistently equated to pavement condition (class) as shown in **Table 6-2**. The WisDOT PCI is calculated based on the identification and measurement of the distresses identified in **Table 6-3** for asphalt and concrete pavement types.

Once the distress types, severities, and quantities are identified, deductions to the rating are determined from the Corps of Engineers density deduct curves. The deduct points are subtracted from 100 to obtain the PCI. **Figures 6-2 to 6-4** displays PCI data for Calumet, Outagamie and Winnebago Counties (2012) with the corresponding percentage of each pavement condition class.

Table 6-2: WisDOT PCI Classification

PCI Ratings (numeric)	Pavement Condition (class)
85-100	Very Good to Excellent
70-85	Good
55-70	Fair
40-55	Poor
25-40	Very Poor
10-25	Serious
0-10	Failed

Annual Average Daily Traffic Counts (AADT)

Annual Average Daily Traffic (AADT) counts were compiled from data provided by WisDOT which is defined as: The estimate of typical daily traffic on a road segment for all days of the week, Sunday through Saturday, over the period of one year. AADT data ranges from the years 2003 to 2012 and provides a historical perspective of general traffic volumes on area roadways. The AADT values are based on continuous operation of the station for the entire year. Vehicles are detected and recorded as individual units, so that no axle adjustment factor is necessary. Table 6-4 details the automated traffic recorder location (by station, county and highway). Figures 6-5 – 6-18 display the AADT for the corresponding automated traffic recorder location.

Park and Ride Lot Counts

WisDOT maintains regular monthly counts on the number of cars parked in their park and ride lots. This monthly data was received from WisDOT for Calumet, Outagamie and Winnebago Counties and is displayed in **Table 6-5**. Data collected for the purpose of this analysis was from 2003 to 2013. Lot ID's 44-04, 44-03 and 70-02 are not within the TMA planning area but were included to provide a regional perspective on park and ride usage within the county. As more park and ride data becomes available, it may be useful to see how the average vehicle counts and the ratio of average vehicle count/capacity change. This data may also be helpful for transportation officials to justify expanding lot capacity or increasing the number of park and ride lots if necessary.

Table 6-5: Park and Ride Lot Counts, Calumet, Outagamie and Winnebago Counties, 2003-2013

County	Lot ID	Description	Lot Capacity	Total (2003- 2013)	Average Vehicle Count	Average Vehicle Count/Lot Capacity
Calumet	08-02	USH 10 & CTH "N"	41	2208	11	27.5%
Calumet	08-01	STH 114 & STH 55	18	1371	7	40.7%
Outagamie	44-04	USH 45 & STH 15	37	530	10	26.5%
Outagamie	44-03	USH 45 & STH 96	26	1930	12	44.7%
Outagamie	44-01	USH 41 & CTH "N"/Evergreen Rd.	88	3765	34	38.5%
Outagamie	44-02	USH 41 & CTH "E"	142	5373	31	21.9%
Winnebago	70-02	USH 45 & STH 116	97	486	6	6.0%

For the most current information regarding park and ride lots, please visit the following website: http://www.dot.wisconsin.gov/travel/parkride/ and click on county of interest from the map.

WisDOT Rideshare Program

WisDOT provides a free rideshare program that brings commuters together for carpooling and bicycle commuting. The rideshare program serves all of Wisconsin plus the bordering counties of neighboring states (IA, IL, MI and MN); the program serves individual commuters as well as employers who wish to participate in providing 'green' alternative commuting options. Rideshare Program registrants' data (county of residence and by county of where registrants work) was collected for Calumet, Outagamie and Winnebago Counties for 2013 and 2014. Note that all registrants' information is current back 24 months; older inactive records are deleted from the system. Also, some duplication of count may occur as some registrants both live and work in the same county. Table 6-6 provides the number of registrants who both live and work in Calumet, Outagamie and Winnebago Counties for 2013 and 2014. In addition to registrant counts, a list of employers with multiple registrants was provided. Local employers whose

Bridge Inspection and Ratings

Wisconsin's bridges are inspected every two years and sometimes more frequently depending on any known deficiencies. Bridge inspections can range from routine to in-depth contingent on the bridge's characteristics and needs. Bridge inspectors are trained to follow FHWA standards and guidelines. Smaller bridges can be inspected on foot, while larger bridges require a "reach all" vehicle with a jointed arm and bucket to provide a detail analysis. Inspectors survey the following bridge facets:

- the superstructure or beams that support the deck looking for cracks, rust, or any problems with bolts or rivets;
- the substructure units (which support the superstructure):
- bridge approaches and the deck or surface of the bridge; and
- on bridges over large bodies of water, inspections require divers to check supporting piers.

The information collected from the bridge inspection is used to assign the bridges with a Sufficiency Rating (SR). SRs take into account 75 factors reviewed during the inspection. The SR ranges from 0 to 100 with 0 representing an in-sufficient or deficient bridge and 100 representing a sufficient bridge. Municipalities are eligible for rehabilitation funding with bridges with a SR of 80 or less and replacement funding with SR of 50 or less.

For 2013, there were 252 bridges rated within the TMA. Of that number, 181 bridges (72 percent) had a SR 81 and above; 53 bridges (21 percent) that qualify for rehabilitation funds (SR 51-80); and 18 bridges (7 percent) that qualify for replacement funds (SR >50). **Table 6-7** and **Figure 6-7** display this data below. **Map 6-11** displays the Bridge Sufficiency Ratings locations.

FHWA / WisDOT Highway Safety Improvement Program (HSIP)

MAP-21 legislation has made safety a priority for the overall design and preservation of the street and highway network and has specifically designated \$43 million in funding to address safety issues through the Highway Safety Improvement Program (HSIP). Additionally the HSIP:

Requires data driven reporting on performance measures and targets.

Sufficiency Rating

- Focuses on crash reductions by analyzing both crash numbers and crash rates.
- Includes four program subareas (HSIP, High Risk Rural Roads Program, Railway-Highway Crossings – Warning Devices, and Railway-Highway Crossings – Elimination of Hazards.
- Is NOT a grant program (funding structure is 90% federal with 10% state/local match).
- Is funded on a four year funding cycle (next eligible application is 2018).
- Involves the development and continuation of intersection safety improvements such as: (installing/modifying traffic signals, roundabouts and channelization/turning radii improvements, straightening isolated curves or hills, improving sight distance, access modifications, constructing turning, bypass or other auxiliary lanes, eliminating roadside obstacle(s), installing guardrails, barriers and crash attenuators, installing signs, delineators, flashing warning lights (including fluorescent, yellow-green signs) at pedestrian-bicycle crossings, in school zones and other problem areas).

¹² http://www.dot.state.wi.us/localgov/highways/docs/hsip.pdf. (03/03/14)

More information regarding the HSIP can be found by accessing the following links from WisDOT: http://www.dot.state.wi.us/localgov/highways/hsip.htm and FHWA: https://www.fhwa.dot.gov/map21/quidance/quidehsip.cfm.

As per 23 CFR Part 490, state departments of transportation are required to develop performance measures and targets to carry out the Highway Safety Improvement Program (HSIP) and to assess serious injuries and fatalities per vehicle miles traveled, and the number of serious injuries and fatalities. Fatalities are monitored by the Fatality Analysis Rating System (FARS) as part of the National Highway Traffic Safety Administration (NHTSA); serious injuries and fatalities rates are documented in the Highway Performance Monitoring System (HPMS). Lastly, serious injuries are documented by WisDOT. All of the above measures were calculated by deriving the 5-year rolling averages of their respective datasets. **Tables 6-8 – 6-19** display this data below.

Transportation Improvement Program (TIP) Performance Indicators

Another performance measure that ECWRPC initiated in 2014 is to track the Transportation Improvement Program (TIP) spending allocations for the MPO. Items include tracking funding allocation by federal, state and local sources; by project and engineering (PE), right of way (ROW) and construction (CONST) costs; preservation (P) and engineering (E); and by project types (highway, rail, bicycle/pedestrian and transit). Funds were tabulated from 2010 to 2014 TIP project years. **Figures 6-20 – 6-23** display this information below. **Note that dollar amounts represent millions of dollars.**

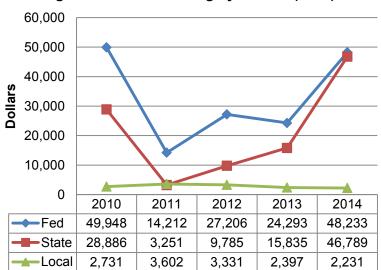

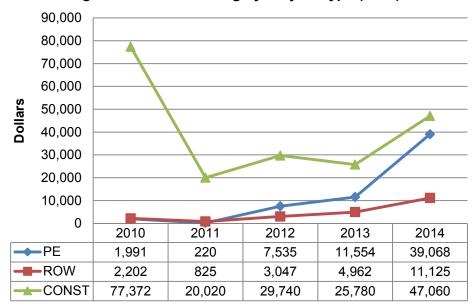

Figure 6-20: TIP Funding by Source (\$000)

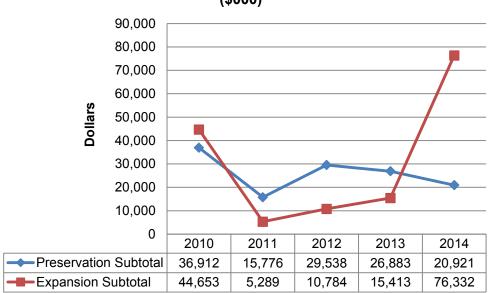

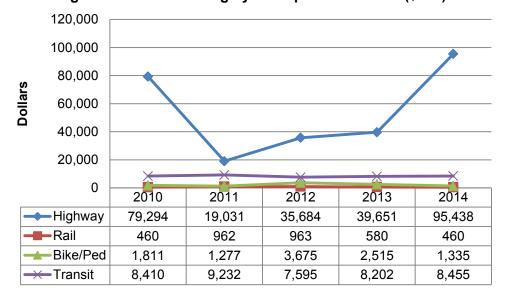

Figure 6-22: TIP Funding by Preservation/Expansion (\$000)

Census Transportation Planning Products (CTPP)

The Census Transportation Planning Products (CTPP) is a database developed by the Federal Highway Administration (FHWA) and the American Association of State Highway and Transportation Officials (AASHTO) and provides census data on demographic characteristics, home and work locations and journey to work travel flows. Data was gathered at the county level and collected as part of the CTPP 2000 and 2006-2010 American Community Survey (ACS) 5 year estimates and compared. For the purpose of this analysis, CTTP variables include collecting data on the following variables which can be tracked over time as performance indicators:

- mode to work (workers 16 and over) of the tri-county region (Tables 6-20 to 6-22);
- travel time to work (workers 16 and over) of the tri-county region (Tables 6-23 to 6-25);
 and
- number of workers in household of the tri-county region (Tables 6-26 to 6-28).

CHAPTER 7: TRAVEL DEMAND MODEL

TRAVEL DEMAND MODEL (TDM) ANALYSIS

Travel Demand Models (TDM) are used to evaluate transportation systems and predict future traffic demands. The 2013 Northeast Regional TDM covers all of Outagamie, Winnebago, Calumet, Fond du Lac, Sheboygan, Manitowoc, Brown, Kewaunee, Door Counties and part of Oconto, Shawano, Waupaca, Dodge, Washington Counties and portions of Waupaca County. The model is further broken down into trip generation areas which include the Appleton/Fond du Lac/Oshkosh, Green Bay, Sheboygan/Manitowoc and rural areas. The Northeast TDM uses a trip based four-step model consisting of trip generation, trip distribution, mode choice, and assignment. The TDM uses socio-economic data, roadway attributes and various parameters to estimate the trip making within and across the model planning area. New for the 2013 model version is the integration of the transportation network with a geodatabase. A geodatabase allows for demographic/socio-economic data to be linked to geographic features such as census tracts, census block groups, municipal boundaries and other geographic features. Having the capabilities of a geodatabase linked with the Northeast TDM lets planners and others use data to show spatial relationships and ultimately gain a better understanding of the region in terms of transportation needs for the future.

The model estimates trips by calculating the number and types of trips traveling between transportation analysis zones across the transportation network. The model uses base year data from 2010 to forecast travel demands/patterns out to year 2045. Within each analysis year, the Northeast TDM estimates traffic movement for four distinct time periods, AM, midday, PM and evening. The TDM is used to analyze the composition of traffic, purpose of travel, peak hour usage, and origin-destination linkages. This allows for explicit analysis of future travel behavior along the Appleton (Fox Cities) TMA's major transportation corridors. The TDM is also useful for forecasting traffic volumes and patterns across the TMA region.

The Northeast TDM is also capable of estimating link-based operational deficiencies for each analysis year. To determine the planning-level operational deficiencies, sufficiency thresholds must be established. WisDOT's *Connections 2030 Plan* establishes a functional hierarchy of the state's corridors and parameters to classify the traffic operations of these particular roadways which can be translated into sufficiency thresholds. The classification system within WisDOT's *Connections 2030 Plan* is based on regional functionality and urban or rural location and is used to determine sufficiency thresholds. The sufficiency thresholds are then converted to Level of Service (LOS) thresholds by applying roadway characteristics such as access, signal density, travel lanes and posted speed limit. The LOS thresholds are then compared to the roadway's current traffic counts and forecasted traffic volumes to determine congestion status. LOS is a quantitative measure of quality of service of a transportation facility. The LOS measures is stratified into six letter grades, "A" through "F" with "A" being the best and "F" being the worst. The Northeast TDM's LOS threshold is equivalent to a LOS C. Each roadway segment depending on functionality and its urban or rural location has a specific LOS C or LOS D threshold.

¹ Facilities Development Manual, Wisconsin Department of Transportation, Chapter 11 Design, Section 5 General Design Considerations. (3/4/2013)

For the purpose of this LRTP, the TDM was used to locate existing and potential congestion areas on regional roadways by calculating Level of Service (LOS) thresholds comparing base year 2010 to forecast year 2045 on roadways within the MPO planning area.

Table 7-1 illustrates the LOS model thresholds. The Northeast TDM is centered on LOS C (uncongested). LOS of A and B (not shown in Table 7-1) are considered not congested as well and LOS of D, E and F are considered moderately to extremely congested. Planning level thresholds are represented by average annual daily traffic (AADT).

Table 7-1: Level of Service (LOS) Threshold Comparison

	Planning Level	Capacity Threshold	•	
	A	verage Annual Daily	Traffic (AADT)	
Facility Type	LOS C (4.0) un-congested (upper limit)	LOS D (5.0) moderate congestion (upper limit)	LOS E (6.0) severe congestion (upper limit)	LOS F (>6.0) extreme congestion (lower limit)

Source: Wisconsin Department of Transportation

^{*}This table provides generalized threshold values that should be used for **planning applications**. WisDOT approved software should be used for more specific operational or design applications. The LOS and capacity calculations are based on the TRB 2010 Highway Capacity Manual. AADT generalized volumes are based on a K250 design hour.

Table 7-2 illustrates congestion levels throughout the Appleton (Fox Cities) MPO for the analysis of road miles. Note: sufficient roadway miles are not illustrated in the table. **Map 7-1** illustrates the LOS thresholds for the Appleton (Fox Cities) MPO in base year 2010. LOS D is equivalent to "Approaching" congestion levels, LOS E is equivalent to "Potential" congestion levels and LOS F is equivalent to "Deficient" congestion levels.

In 2010, congested areas in the Appleton (Fox Cities) represented within the tri-county region included:

Calumet:

- USH 10 from approximately CTH M from the west to CTH N to the east near the Village of Sherwood
- USH 10 (Oneida Street) from Midway Road to the STH 441/USH 10 interchange

Outagamie:

- USH 41 (future Interstate 41) from STH 15 to CTH N near Little Chute
- STH 47 from Mackville Road/CTH O to W Broadway Drive
- Meade Street (portions roughly bounded by CTH OO (Northland Avenue) to the north and STH 96 (Wisconsin Avenue) to the south)
- STH 96 from N Badger Avenue to west of the Interstate 41 interchange near the Fox River Mall
- STH 15 roughly between the Village of Greenville to Village of Hortonville
- CTH CA/STH 125 and Interstate 41 interchange and west to Casaloma Drive
- S Badger Avenue from STH 125 (College Avenue) to STH 47
- College Avenue from S Oneida Street to S Lawe Street
- College Avenue bridge over Fox River to E John Street
- College Avenue from STH 441 interchange east to Railroad Street

Winnebago:

- CTH CB from W Prospect Avenue to Shady Lane
- USH 10/STH 441 Bridge over Little Lake Butte Des Morts
- CTH P (Racine Street) from USH 10/STH 441 interchange to Main Street (Menasha)
- Main Street (Menasha) from Racine Street to STH 114 (Washington Street)
- Interstate 41 from just south of Breezewood/Bell Street Interchange to STH 76 (near Oshkosh)

Map 7-2 illustrates the LOS thresholds for the MPO projected by year 2045. Congested areas in the Appleton (Fox Cities) represented within the tri-county region include:

Calumet:

- The same corridors mentioned above in 2010
- CTH KK (Calumet Street) from roughly STH 441 to CTH N
- Lake Park Road from S Kensington Drive to Plank Road
- Portion of Plank Road east of USH 10 intersection to approximately Southfield Drive

Outagamie:

- The same corridors mentioned above in 2010
- College Avenue/CTH CE east to urbanized area boundary near City of Kaukauna
- STH 55 from CTH CE north to Interstate 41
- Portions of CTH CB from CTH OO to CTH BB (W Prospect Avenue)

Winnebago:

 The same corridors mentioned above in 2010 with the exception of Interstate 41 from Oshkosh to Neenah and the bridge over Little Lake Butte Des Morts

A complete listing of the LOS road segments and summary are included in **Table 7-2** below comparing 2010 data to projected 2045 data (**Table 7-3**) for LOS D, E and F from high to low mileage.

CHAPTER 8: PUBLIC AND SPECIALIZED TRANSPORTATION

INTRODUCTION

Chapter 53 of title 49, United States Code, as amended by MAP-21, notes that the metropolitan transportation planning process work "to encourage and promote the safe and efficient management, operation, and development of surface transportation systems that will serve the mobility needs of people and freight and foster economic growth and development within and between States and urbanized areas, while minimizing transportation-related fuel consumption and air pollution through metropolitan and statewide transportation planning processes." The public and specialized transportation options within the Appleton (Fox Cities) TMA are both necessary elements that move people throughout the planning area. This chapter documents the current public and specialized transportation services within the Appleton (Fox Cities) TMA as well as lists performance measures to track and follow over subsequent plan updates.

TRANSIT

Service Area

The Valley Transit System, which is owned and operated by the City of Appleton, provides transit services throughout the Appleton (Fox Cities) TMA. Such services include fixed route bus service, complimentary ADA paratransit service (Valley Transit II), and various ancillary paratransit services including fixed route sheltered workshop services, demand responsive sheltered workshop services, elderly demand responsive services, Connector, Call-A-Ride and a seasonal trolley service (operates from June 5 to September 27). The paratransit services are contracted out to various service providers and are supported by funding partners that include municipalities, counties, family care organizations and private funding partners.

As of 2014, the municipalities include: the Cities of Appleton, Kaukauna, Menasha, and Neenah, the Towns of Buchanan, Grand Chute, Harrison and Menasha; the Villages of Kimberly and Little Chute; as well as Calumet, Outagamie, and Winnebago Counties.² An overview of the service area is displayed in **Map 8-1**.

Service Characteristics

Fixed Routes

Individual route maps are included in Maps 8-2 to 8-23.

School Tripper

In addition to these routes, Valley Transit operates tripper service during the school year. Valley Transit provides tripper service to Appleton North High School, Fox Valley Lutheran, James Madison Middle School, Appleton East High School, Appleton West High School and Wilson Middle schools.

http://www.appleton.org/departments/?department=fb4dcfb8d520&subdepartment=dc80bfa22795. (10/16/14)

Fixed Route Ridership

After a decline in ridership in 2009, ridership has been on the rise surpassing 1 million each year through 2013. **Table 8-1** documents Valley Transit service characteristics for unlinked passenger trips, vehicle revenue miles and vehicle revenue hours from 2004 – 2014. The data was provided by the National Transit Database transit profiles.³ Unlinked passenger trips represent the total number of boardings (trips), including all transfers on the system. Revenue miles represent the number of miles a bus is in service carrying passengers, while generating revenue. Revenue hours represent the number of hours a bus is in service carrying passengers, while generating revenue.

Table 8-1: Fixed Route Service Characteristics, 2004 - 2014

Ridership	Valley Transit				
Year	Unlinked Passenger Trips	Vehicle Revenue Miles	Vehicle Revenue Hours		
2004	937,410	857,829	56,246		
2005	928,884	859,762	56,350

Fixed Route Fare Revenues and Operating Expenses

From 2004 to 2014, Valley Transit operating expenses remained steady between \$4 to 5 million. Fare revenues have generally increased during this same time period, ranging from \$535,770 in 2004 to \$841,274 in 2014 for fixed route services. Please reference **Table 8-2**.

Table 8-2: Fixed Route Service Fare Revenues and Operating Expenses, 2004 - 2014

<u> </u>					
Ridership	Valley Transit				
Year	Operating Expenses (\$)	Fare Revenues (\$)			
2004	4,135,495	535,770			
2005	4,051,098	612,040			
2006	4,180,668	690,869			
2007	4,340,522	691,204

The Connector

In October of 2007 Valley Transit, in partnership with United Way Fox Cities, launched The Connector. The Connector extends regular bus routes beyond standard route boundaries to help local residents more easily reach their jobs or other places that may fall outside of regular Valley Transit service areas. The Connector also operates beyond normal Valley Transit hours, which provides access to public transportation for those who work second or third shift. The Connector is available to all area residents.

The Connector offers transportation 20 hours a day, six days a week. (The Connector does not operate between midnight and 4 am, on Sundays or on holidays.) The Connector Zone is roughly bordered by County JJ to the north, State 76 to the west, County G to the south and Harwood Road to the east. It extends service beyond the regular fixed route system to one of six bus transfer points within the fixed route service area. Valley Transit contracts the Connector service through Running Inc.

To access The Connector, residents can call Running, Inc. at (920) 832-5789. They can also call Valley Transit directly at (920) 832-5800 for information. All rides need to be scheduled at least two hours in advance and can be arranged up to 14 days in advance. If riders need to cancel, a call is required at least one hour prior to the scheduled ride.

How It Works

There are three main ways The Connector will provide service to local residents. All fares must be paid with cash in the exact amount. Drivers cannot make change.

- Traveling TO The Connector Zone: Valley Transit bus service will take passengers to a
 transfer point closest to their final destination and The Connector will then take
 passengers the rest of the way. For each one-way trip, passengers will pay \$2.00 (or
 their normal fare) on the bus and \$4 on The Connector.
- Traveling FROM The Connector Zone: Transportation will be provided by The Connector to the nearest Valley Transit bus transfer point. Valley Transit bus service will then take passengers to their final destination. For each one-way trip, passengers will pay \$4 on The Connector and \$2.00 (or their normal fare) on the bus.
- Traveling WITHIN The Connector Zone: The Connector will transport passengers from their specified pick-up point to their final destination. For each one-way trip, passengers will pay \$6.
- Transfer points include:
 - o (1) North Transfer Point: Piggly Wiggly at 1st Avenue
 - o (2) West Transfer Point: Fox River Mall
 - o (3) East Transfer Point: Goodwill in Darboy
 - (4) South Transfer Point: Neenah Transit Center
 - o (5) Downtown Appleton: Transit Center
 - o (6) Northeast Transfer Point: Piggly Wiggly in Little Chute

Call-A-Ride

Call-A-Ride service, which is operated through a contract with Kidz Kab, LLC, is open the general public with hours of operation running from 7 a.m. to 7 p.m. Monday through Saturday. A two hour advanced reservation is required. The fare for this service is \$2.00 (one way). Free transfers can be made to any Valley Transit bus. Call-A-Ride service area is for the Towns of Buchanan and Harrison, making trips to and from the downtown Appleton Transit Center.

ADA Paratransit Service and Elderly Service

Ridership

In addition to fixed-route service, Valley Transit also provides ADA paratransit service and ancillary paratransit services. Wheelchair accessible Valley Transit II is offered to the non-ambulatory disabled as well as seniors over 60 years and individuals with disabilities. Paratransit service is eligible for the same federal and state aids as fixed-route service. Paratransit trips have fluctuated between 2004 and 2014, ranging from a low of 179,524 in 2012 unlinked trips to a high of 224,817 in 2008. Please reference **Table 8-3**.

Table 8-3: Purchased Transportation Service Characteristics, 2004 - 2014

Ridership	Valley Transit				
Year	Unlinked Passenger Trips	Vehicle Revenue Miles	Vehicle Revenue Hours

Paratransit Fare Revenues and Operating Expenses

Paratransit expenses have been on the rise since 2004; from \$1,799,357 in 2004 to \$3,471,252 in 2014. This figure is without depreciation and interest factored in. Overall, fare revenues have almost doubled in the ten year period. This is due to more use of the services with fares and a reduction in the use of services that are fare free. With the incorporation of the Family Care organizations, several of Valley Transit's fare free services were eliminated while other fare free services saw a reduction in ridership as the Family Care organization provided rides by alternate means. Paratransit fare revenues by year are also shown in **Table 8-4**.

Table 8-4: Purchased Transportation Service Fare Revenues and Operating Expenses, 2004 - 2014

revenues and operating Expenses, 2001 2011

Specialized Transportation

"Specialized transportation services" means a transportation system, either publicly or privately owned, which provides to elderly or disabled persons general or special service on a regular and continuing basis in a designated service area (WI State Statute 85.21). In order to understand the need/demand for specialized transportation services in the Appleton (Fox Cities) TMA, it is important to have an understanding of the basic demographic profile of the region.

Table 8-9 provides a demographic profile by age cohort for Outagamie County. Table 8-9 compares census data from 2000 to 2010. As shown in this table, there has been a substantial increase in the total number and percentage of the 45 to 64 years old and 65+ years old cohorts; a pattern that will likely continue for the life of this LRTP.

Table 8-9: Demographic Profile Outagamie County

	Population by Age Cohort				
Age Cohort		2000		2010	2000 to 2010
	Number	Percent of Total	Number	Percent of Total	Percent Change
Median Age	34.4		37.1		7.8
Total Population	160,971		176,695		9.8
Under 18 Years Old	44,527	27.7	44,424	25.1	-0.2
18 to 24 Years Old	14,293	8.9	15,343	8.7	7.3
25 to 44 Years Old	51,274	31.9	48,111	27.2	-6.2
45 to 64 Years Old	33,292	20.7	47,983	27.2	44.1
65 + Years Old	17,585	10.9	20,834	11.8	18.5

County Human Services-Public Transportation Coordination Plan

A county human services-public transportation coordinated plan is a five year plan dedicated to sharing resources both intra- and inter-county to assist the transportation disadvantaged public in getting rides based on their individual mobility needs. Broad and encompassing strategies and actions are developed to enhance the mobility needs of the elderly and disabled for the life of the plan.

According to Federal Transit Administration (FTA) rules, a human service-public transportation coordinated plan must include the following four elements:

- 1. An assessment of available services that identifies current transportation providers (e.g., public, private and nonprofit);
- An assessment of the transportation needs for individuals with disabilities and older adults. The assessment can be based on the experiences and perceptions of the planning partners or on more sophisticated data collection efforts and gaps

in service:

- Strategies, activities and/or projects to address the identified gaps between current services and needs, as well as opportunities to improve efficiencies in service delivery; and
- 4. Priorities for implementation based on resources (from multiple program sources), time, and feasibility for implementing specific strategies and/or activities identified.

Federal transit law, as amended by Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) (2005), and continued in Moving Ahead for Progress in the 21st Century Act (MAP-21) (2012), requires that projects selected for funding under the Section 5310 Enhanced Mobility of Seniors and Individuals with Disabilities Program be "derived from a locally developed, coordinated public transit-human services transportation plan" and that the plan be "developed through a process that includes representatives of public, private, and non-profit transportation and human services providers and participation by members of the public."

MAP-21 repealed 5316 (Job Access and Reverse Commute) and 5317 (New Freedom) programs. 5316 projects are now eligible for funding under public transportation grants programs (5311 and 5307), which do not require coordinated planning. 5317 projects are now eligible under 5310 and require coordinated planning. Wisconsin State Statute 85.21 (Specialized Transportation Assistance Program) candidate projects also require coordinated planning to receive funding. Projects selected for 5310 and 85.21 funding must align with the county human services-public transportation coordinated plan.

System Summary Analysis

As part of the *Outagamie County Human Services-Public Transportation Coordinated Plan*, a system summary analysis was completed. The following gaps/needs and barriers were recognized along with potential strategies to improve the specialized transportation system (see **Table 8-10**):

⁴ http://www.dot.wisconsin.gov/localgov/transit/toolkit.htm.

Table 8-10: Outagamie County Coordination Facilitation

Gap/Need/Barrier	Strategy	Priority
Establishment of a Fox Cities Regional Transportation Authority (RTA)	al Transportation Regional Transportation Authority (RTA) at the least and regional level and contest least	
 Increased education to key policy makers; database of concerned individuals/impacted consumers; Need more positive stories of people using public transportation; Overall public transportation overwhelming environment is to an elderly person and some people who do not use the public transportation; security of transit center; police records indicate that transit facilities are safe; working with the community and neighbors to improve perceptions; Need more people to come to the budget public hearings for the City of Appleton and other various municipalities; Education on various public hearings; some of the times of those meetings are set by enabling legislation; as well as the State of WI 	Expand on travel training and Bus Buddy Program; continue to market with transit providers; ESTER (economic research/data on the benefits of public transit to the local economy); support the "Complete Streets" policies; advertise with mailers; leaders setting an example of transit; letters to the editor with personal stories; outreach/presentations to the communities; support TRANSPORTATION PLUNGE (Fox Cities) in spring 2014; incentives for local businesses/students to use public transit (AASD for middle/high school students); coordinate with Lawrence University students; grant opportunities	2 (tie)
Lack of monies for transportation providers - want to avoid budget cuts	Contact legislators about importance of services; gathering community support and contributions; educate the public on funding issues/ensuring a better perception of public transit; advocate for funding for capital and operation costs (alternative funding such as through a Regional Transit Authority (RTA) is supported)	3

Gap/Need/Barrier	Strategy	Priority
Meeting needs in a timely fashion during peak hours Private contractor seems more interested in not providing rides (in reference to non- emergency transportation) Wheelchair transportation County public hearings and other public meetings should provide public transportation for those individuals that need public transportation to attend those meetings Different groups of people have a lot of the similar needs - duplication of services; lack of data to show what services are needed by disable individuals; those individuals with disabilities are more towards the bottom of the priority list. Affordable and efficient public transportation Location of clinics and medical buildings, planning of transportation for new development in general - because they may not be on the public transportation services	Purchasing vans from Group Homes; coordination with other providers (private and non-profit); education/outreach to the public; research on weight limit capacities for lifts	4 (tie)

Gap/Need/Barrier	Strategy	Priority	
Having a Regional (Regional local something with local ties) brokerage (independent group i.e. EC or Making the Ride Happen, Valley Transit, Lamers) for all paratransit • take care of medical, ADA, elderly, school, anything specialized transportation - use trip planners on the internet - do it more efficiently and effective; must be a regional issue - not by county -		5 (tie)	
Hospital/late night discharges	Bringing healthcare providers together; researching other examples of success stories	6	

TRANSIT PERFORMANCE MEASURES

Unlinked Passenger Trips per Vehicle Revenue Mile (UPTVRM)

One way to measure the service effectiveness of public transportation and paratransit services is to examine annual vehicle revenue miles and annual unlinked trips. Vehicle revenue miles are the miles that vehicles are scheduled to or actually travel while in revenue service; unlinked trips represent the number of passengers who board public transportation vehicles and are counted each time they board vehicles no matter how many vehicles they use to travel from their origin to their destination.⁵

Table 8-11 provides a Transit Profile of Valley Transit for their bus and demand response services. The Unlinked Passenger Trips per Vehicle Revenue Mile (UPTRVM) is the calculated ratio of unlinked trips to vehicle revenue miles and are displayed in the table. Larger UPTVRM ratios indicate higher service effectiveness.

Table 8-11: Appleton Valley Transit Profile (2004 - 2014)

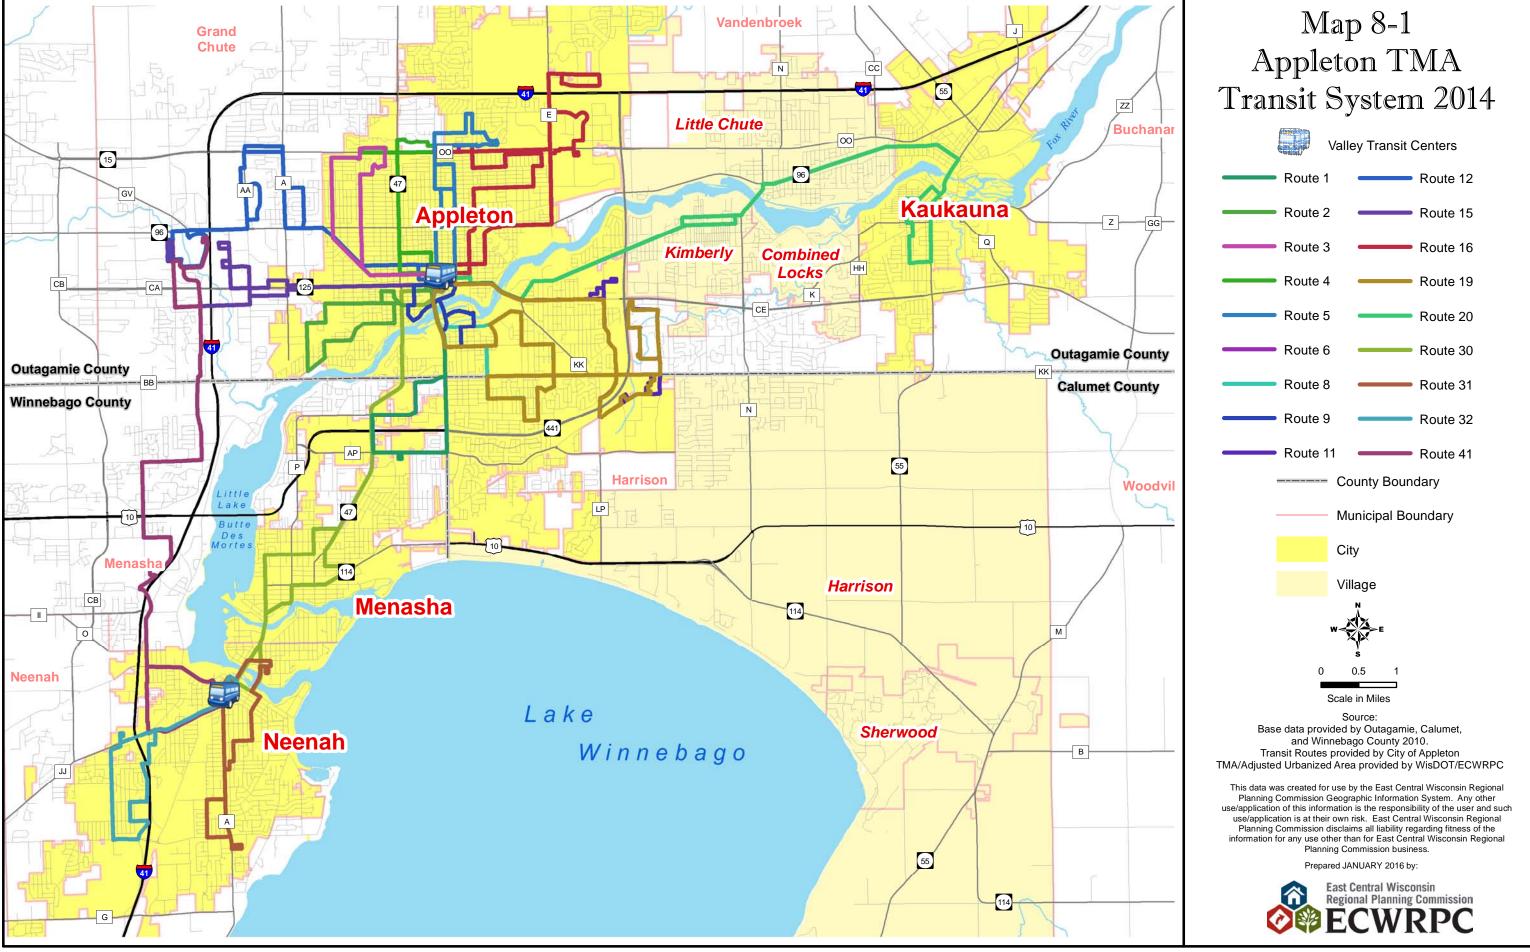

Ridership	Bus		Purchased Transportation			
			Unlinked			Unlinked
			Passenger			Passenger
	Annual	Annual	Trips per	Annual	Annual	Trips per
	Unlinked	Vehicle	Vehicle	Unlinked	Vehicle	Vehicle
	Passenger	Revenue	Revenue	Passenger	Revenue	Revenue

⁵ http://www.mbta.com/uploadedfiles/About the T/Financials/Stats%20Presentation%209-7-11.pdf. (4/3/14)

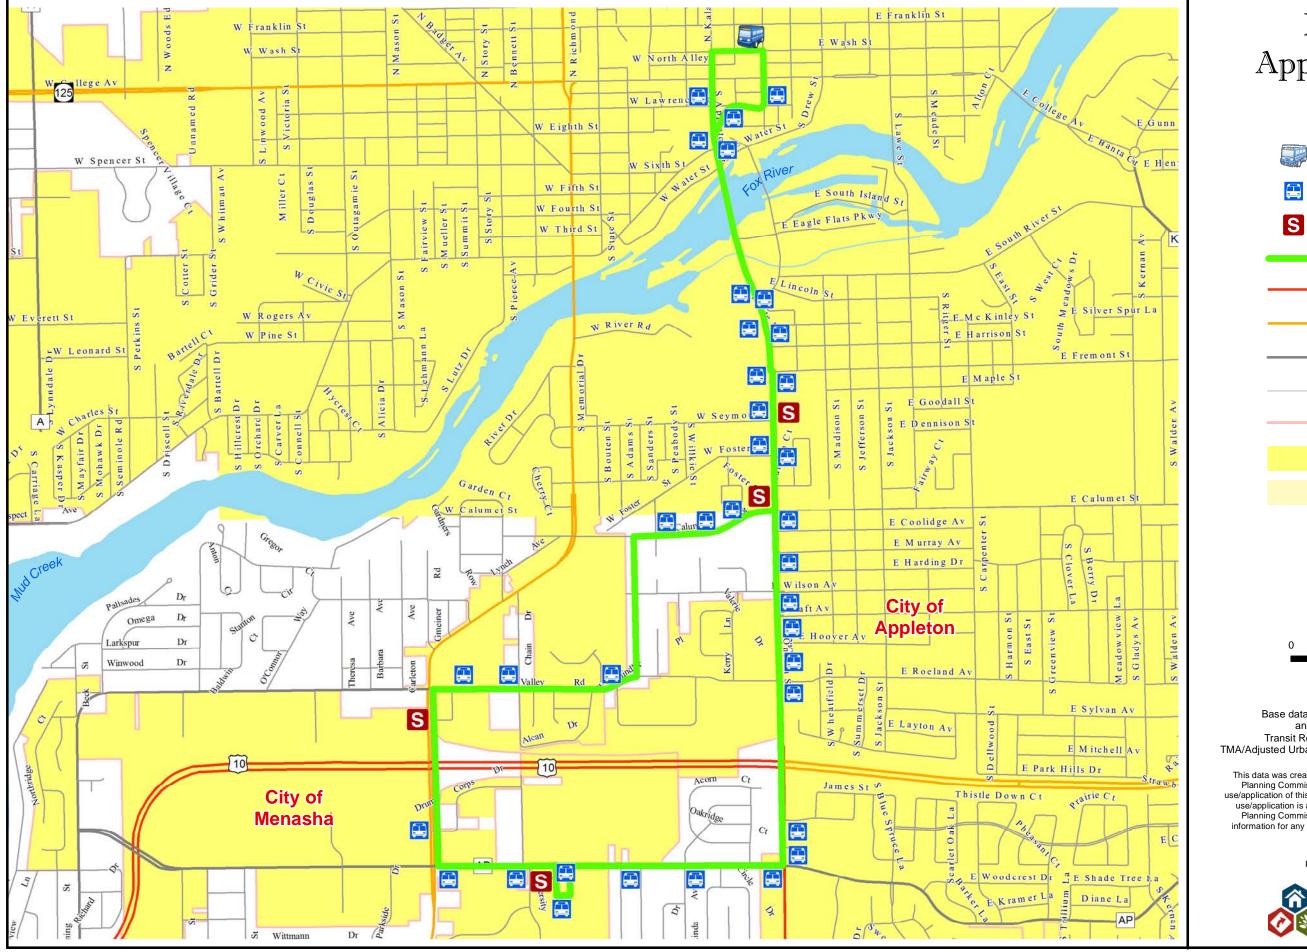

Population within a Quarter Mile of Public Transportation

Public transportation ridership is dependent upon a variety of factors, one of which is the distance a person/family lives from a scheduled fixed route stop. The general rule of thumb is that people will be willing to walk up to about a quarter mile to and from a fixed route stop to use public transportation. Using this quarter mile rule, ECWRPC calculated the total Appleton (Fox Cities) TMA population within a quarter mile of a fixed route service stop. In 2013, the approximate population living within a quarter mile of a fixe route service stop was 117,614. The approximate population of the Appleton (Fox Cities) TMA was 216,154 (2010 Census), which equates to about 48 percent of the population living within a quarter mile of public transportation. As future updates to the long range transportation plan occur, ECWRPC will continue to monitor this performance measure as a means to maintain and promote public transportation within the Appleton (Fox Cities) planning area.

CHAPTER 9: FREIGHT

INTRODUCTION

The State of Wisconsin's long range multimodal plan, Connections 2030, mentions that "quality of life and economic growth depend on a safe, efficient, effective and coordinated multimodal transportation system that provides choices for people and goods, enabling quick and convenient transfers among modes". Our regional economy is dependent upon timely transportation modes which are dependable and reliable. Freight movement via over the road trucks, rail and air is important for the state at a regional and local scale. Nationally, truck transportation revenues exceeded \$200 billion and class I freight railroads exceeded \$46 billion in 2009.^{2,3}

NATIONAL PRIMARY FREIGHT NETWORK (US DOT)

Section 167(c) of title 23 United States Code (U.S.C.), which was established in Section 1115 of MAP-21, directs the Secretary [of the US DOT] to establish a national freight network to assist states in strategically directing resources toward improved system performance for efficient movement of freight on the highway portion of the Nation's freight transportation system. This includes the National Highway System, freight intermodal connectors, and aerotropolis transportation systems.4

Under 23 U.S.C. 167(c), the national freight network will consist of the primary freight network, the portions of the Interstate System not designated as part of the primary freight network, and critical rural freight corridors. The designation of the primary freight network will be based on an inventory of national freight volume conducted by the Administrator of the Federal Highway Administration, in consultation with stakeholders, including system users, transport providers, and states. The primary freight network will be comprised of not more than 27,000 centerline miles of existing roadways that are most critical to the movement of freight, but the 27,000 mile cap may be increased by an additional 3,000 centerline miles of existing and planned roadways that the Secretary deems critical to the future efficient movement of goods on the primary freight network.5

Within the Appleton (Fox Cities) TMA, US Highway 41 (and future Interstate 41) is designated as part of the national "Primary Freight Network" or PFN. A map of the entire PFN for Wisconsin may be found in **Appendix D** of this document. US Highway 41 with a starting point at US Highway 45 and an ending point of US Highway 141 has an estimated 123 miles that are part of the PFN.6

Source: Freight Facts and Figures 2013 (FHWA and Bureau of Transportation Statistics)

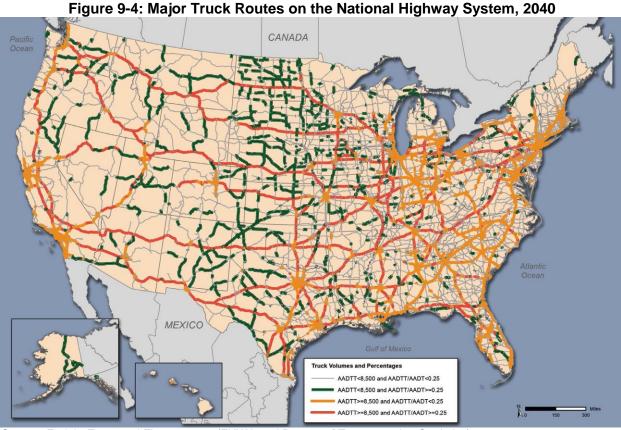

According to a FHWA/Bureau of Transportation Statistics 2013 report, *Freight Facts and Figures*, long-haul freight truck traffic is primarily concentrated on the Interstate System. This report notes that "By 2040, long haul freight truck traffic in the United States is expected to increase dramatically on the National Highway System. Forecast data indicate that truck travel may reach 460 million miles per day". Please see **Figures 9-1** and **9-2**. Regionally, USH 41 remains the vital travel corridor for the Appleton (Fox Cities) TMA.

Source: Freight Facts and Figures 2013 (FHWA and Bureau of Transportation Statistics)

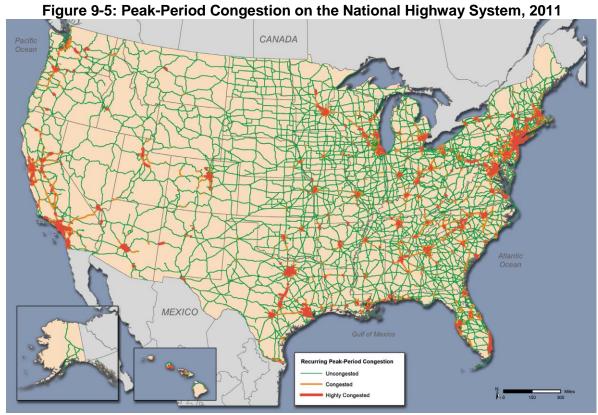

⁷ Freight Facts and Figures 2013 (FHWA and Bureau of Statistics). (10/20/14)

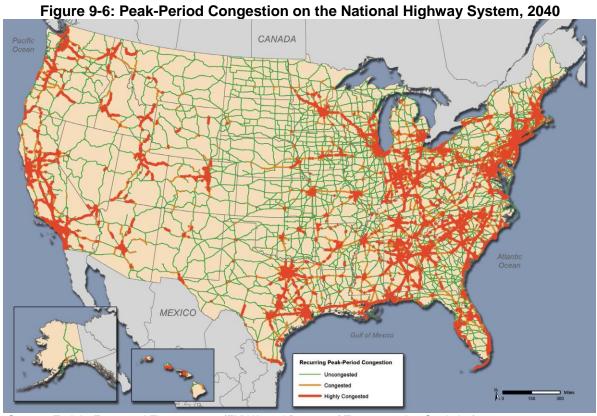

Source: Freight Facts and Figures 2013 (FHWA and Bureau of Transportation Statistics)

Figures 9-3 and 9-4 show truck volumes as absolute numbers and as a percentage of the traffic stream. According to the same FHWA report, nearly 14,530 miles of the National Highway System carry more than 8,500 trucks per day on sections where at least every fourth vehicle is a truck. This report also notes that segments carrying more than 8,500 trucks per day are expected to increase by approximately 42,000 miles or by 175 percent by 2040. For east central Wisconsin, USH 41 is forecasted (by 2040) to have at least 8,500 or more annual average daily truck traffic; this represents less than 25 percent of total vehicle traffic on these road segments.⁸

⁸ Freight Facts and Figures 2013 (FHWA and Bureau of Statistics). (10/20/14)

Source: Freight Facts and Figures 2013 (FHWA and Bureau of Transportation Statistics)

Source: Freight Facts and Figures 2013 (FHWA and Bureau of Transportation Statistics)

Figures 9-5 and 9-6 show peak period congestion on the National Highway System in 2011 and forecasted to 2040. Assuming no changes in network capacity, increases in truck and passenger vehicle traffic are expected to expand areas of recurring peak-period congestion to 34 percent of the National Highway System in 2040 compared to 10 percent in 2011. This has the potential to slow traffic on 28,000 miles of the National Highway System and create stopand-go conditions on an additional 46,000 miles. At the regional level, the TMA will continue to monitor traffic patterns and trends and work with municipalities to make appropriate recommendations.

HIGHWAY AND LOCAL ROAD SYSTEM (CONNECTIONS 2030 PLAN)

Wisconsin's has approximately 122,177 miles of highways and local roadways of which 11,769 miles are dedicated to the state and interstate highways. Trucking has traditionally been and is projected to be an integral part of the regional economy. For example, in 2002, the total value of goods shipped just within the state accounted for \$108,148 (millions of dollars); by 2035, this amount is expected to reach \$198,784 (millions of dollars). Trucking is expected to account for 68 percent of all 2035 freight shipments measured by weight and 76 percent of all 2035 freight shipments measured by value. The local TMA scale, it is important to preserve and maintain the local and regional road networks which facilitate efficient and dependable truck transportation options.

RAIL SYSTEM (WISCONSIN RAIL PLAN 2030)

Wisconsin's rail system is another integral part in the movement of freight within and out of the state. The state has approximately 3,600 miles of track, of which only about 530 miles are owned by the state and leased out to rail companies. ¹⁴ Rail transportation within Wisconsin is projected to be an important part of the regional economy for several reasons as noted by WisDOT in their *Wisconsin Rail Plan 2030*¹⁵:

- Rail service provides a low cost transportation alternative for high volume, lower value commodities that are essential to many of Wisconsin's manufacturing industries.
- Rail freight movement between Wisconsin, Canada and Mexico is expected to continue to grow.
- Intercity passenger rail provides a travel option for those who cannot, or choose not to, drive or flv.
- Both rail freight and passenger service provide an energy efficient way to move goods and people.

⁹ Freight Facts and Figures 2013 (FHWA and Bureau of Statistics). (10/20/14)

http://www.dot.state.wi.us/projects/state/docs/railplan-chapter1.pdf. (06/26/14)

¹⁵ Ibid. (06/26/14)

Additionally, WisDOT outlined several policies and actions to guide future coordination of the Wisconsin Rail Plan 2030¹⁶, including to:

- Establish a freight focus in WisDOT to better understand freight needs across the state and to integrate freight transportation policies into department planning and investment decision-making processes.
- Assume the role of facilitator and advocate for freight between public and private interests.
- Collect and analyze data to support freight planning.
- Conduct an all-mode freight study.
- Work with railroads to ensure that appropriate rail service is provided to all shippers statewide.
- Preserve corridors for future rail use.
- Acquire lines into public ownership to preserve essential railroad service.
- Fund track and bridge upgrades for publicly-owned rail corridors.
- Continue to preserve corridors for future transportation use.
- Provide loan assistance to Wisconsin businesses and communities.

In terms rail freight data, 179.1 million tons of commodities were shipped within and through the state in 2007, representing about 15 percent of total freight value (\$182.6 billion) ¹⁷ Canadian National (CN) is the major rail company within the East Central Wisconsin region. In 2007. CN shipped an average of 40-59.9 gross tons on their rail lines which run through Fond du Lac, Oshkosh and to the Fox Cities. 18 Wisconsin commodities are shown in detail in **Table 9-1**. Destinations for Wisconsin originating rail freight are shown in Table 9-2; originations of rail freight terminating in Wisconsin are shown in Table 9-3.

Other	9,545,158	12.0 %
TOTAL	79,262,331	100.0 %

Source: WisDOT Rail Plan 2030

The top three destinations of rail shipments that originate in Wisconsin are Illinois, at 30 percent; Wisconsin, at 20 percent; and Texas, at nine percent of the total originating rail tonnage. The top three originations of commodity rail shipments that terminate in Wisconsin are Wyoming, at 38 percent; Minnesota, at 19 percent, and Montana, at 15 percent. The high percentage of shipments from Wyoming is due to importing coal from the Powder River Basin. Please reference **Figure 9-7**. Utilities, which rely on rail to supply large quantities of coal for power generation, contribute approximately \$4.3 billion annually and provide almost 11,100 jobs to the state's economy²⁰.

COMMODITY PROFILES (WISDOT)

WisDOT also has commodity profile data that details commodity flows at the county level. **Tables 9-4 to 9-29** displays outbound and inbound freight data for truck, rail and air transportation modes. Please note that this data is from 2012 for Calumet, Outagamie and Winnebago Counties. Outagamie County is the only county with air freight data.

2030 STATE FREIGHT SHIPMENTS FORECASTS (ALL TRAVEL MODES)

Table 9-30 displays Wisconsin freight shipments by weight in 2007 historic values and projections for shipments out to 2030 (measured in thousands of tons). This data was obtained from WisDOT's *State Rail Plan 2030* (Chapter 5). The data is shown in four categories: freight leaving Wisconsin, freight entering Wisconsin, freight travelling within Wisconsin, and Overhead (travelling through Wisconsin). This data was collected for all freight modes including rail, truck, water and air. In total, rail freight shipments by weight are forecasted to increase by about 16 percent by 2030; truck freight shipments by weight are forecasted to increase by about 14 percent by 2030; data not available for air and water freight data. Please note: These forecasts were prepared prior to the recent rapid growth in the outbound movement of non-metallic minerals; more specifically, frac sand. These forecasts were also prepared prior to the announced closings, or conversions, of several coal-fired power plants. Future forecasts are likely to change.²¹

CANADIAN NATIONAL (CN) RAIL PROFILE

Within the East Central Wisconsin Region, Canadian Nation (CN) is the primary railroad operator. CN operates 1,578 miles (44 percent of total mileage) of track within Wisconsin and employs 440 staff (2009 data). CN operates a major railroad yard in North Fond du Lac and yards in Oshkosh, Neenah and Appleton. The maximum allowable car weights for railcars on CN's routes within the MPO can range from 263,000 to 286,000 pounds. For those interested, CN has a price calculator which allows customers to obtain a price quote by the carload. Please access the following link for more information:

 $\underline{\text{https://ecprod.cn.ca/velocity/POWCarloadFrontend/public/english/GetCarloadPrice}}.$

See **Appendix E** documenting the entire rail system for Wisconsin.

AIRPORT FREIGHT

The Outagamie County Regional Airport supports the following airport uses²⁵:

- Personal/Recreational
- Business/Corporate
- Commercial Service
- Cargo
- Flight Training
- Charter
- Search and Rescue
- Military

Annual operations and enplanements (boardings) (2010) at Outagamie County Regional Airport are as follows²⁶:

- Air Carrier (13,780)
- Air Taxi (1,452)
- Air Cargo (1,452)
- Military-Local and Itinerant (266)
- General Aviation-Local (5,345)
- General Aviation-Itinerant (17,800)
- Total Operations (38,643)
- Enplanements (272,470)

Air cargo operations are an important element for Outagamie County Airport. According to a survey produced by the *State Airport System Plan*, the Outagamie County Airport handles approximately 25,962,500 pounds of inbound and outbound cargo in 2010; of which 5 percent was freight, 5 percent was US Mail and the remainder 90 percent was Express cargo.²⁷ The Outagamie County Regional Airport currently has one air cargo operation - Federal Express. The facility provides overnight, next day and freight service.²⁸

In terms of forecasting for future cargo demands for Outagamie County Airport, the airport is expected to see a jump to 36,748,200 pounds of inbound and outbound cargo by the year 2030 or an increase of approximately 10,785,700 pounds.²⁹

Outagamie County Regional Airport Sustainable Master Plan (2012) also published their historic air cargo activity and forecasts. For comparison, their information is included in **Table 9-32**. They note, "Forecasts of total annual pounds of cargo shipped at the Airport are developed by applying the proportional changes in U.S. activity 2012-2031 to the Airport's 2011 total of 25,371,771 total pounds shipped." Air cargo handled at ATW is projected to increase to over

[[]a] Source: Airport records

Additionally important to Outagamie County Airport and the potential to continue to expand upon freight planning is the facilities' Airport Business Park. The business park is an undeveloped area of the airport (approximately 75 acres) on the northwest side of the property. As of September 2014, one of the 8 business park lots was leased.³²

FOX RIVER LOCK SYSTEM

The Lower Fox River is a 39 mile long river controlled by 17 wooden hand operated locks and 4 dams. At one time, the Lower and Upper Fox River was a thriving transportation route, moving passengers and freight from the Port of Green Bay to Lake Winnebago to Portage. However, with the development of the railroads the Fox River commercial transport business ceased to be relevant. In 1983 the U.S. Army Corps of Engineers closed the Fox River lock system to commercial traffic. All but 3 out of the 17 locks were abandoned and left to slowly decay until 2001 when the State of Wisconsin took over the lock system and began restoration. Today, the Fox River Lock System is not only an important historical asset and transportation network for tourism and recreation, but a foundation of a once thriving commercial transport network. If the current modes of commercial transportation can no longer support the demand of the freight users, then the Fox River lock system should be considered as a viable solution to meet future transportation needs.

PORT OF GREEN BAY

The Port of Green Bay (a recognized Free Trade Port) remains a vital transportation link for the entire Northeast Wisconsin region and beyond as it imports dry and liquid bulk commodities for manufacturing businesses. Major shipments to the port include coal, limestone, salt and cement; total commerce is about 2.2 million metric tons (2013). It is recommended that the Port of Green Bay increase the depth of the Fox River channel from 24 feet to 26 feet and widen the channel from 100 feet to 250 feet to accommodate larger ships. The 2010 Green Bay Metropolitan Planning Organization Long Range Transportation/Land Use Plan also recommends looking for additional exports such as finished products area foundries, paper converting machines from local and regional paper mills, wood pulp and grain from producers in northeast Wisconsin. Additionally, the MPO recommends that local and regional municipalities look to create/expand the Maritime Highway Corridor (M-41/43) into the Port of Green Bay, possibly creating more economic opportunities for trade/commerce for northeast Wisconsin. Major shipments to the port include coal, limestone, salt and cement; total commerce is about 2.2 million metric tons (2013).

Infrastructure Investment Survey of the Great Lakes and St. Lawrence Seaway System

In a 2015 report titled, *Infrastructure Investment Survey of the Great Lakes and St. Lawrence Seaway System*, the authors sent a survey to some 600+ companies and government agencies involved with the maritime freight industry. This report compiled data from 2009 to 2013. Some of the major highlights from this survey included³⁸:

- A total of \$7 billion is being spent on asset renewal and infrastructure improvements by both public and private sectors (in Canada and the United States).
- Between 2009-2013 more than \$4.7 billion has been invested in ships, ports and terminals, and waterway infrastructure.
- An additional \$2.2 billion has been committed for infrastructure investments in the system by companies and governments.
- American, Canadian and international ship owners are spending more than \$4 billion on the biggest renewal of the Great Lakes fleets in 30 years.
- Total port, terminal and waterway infrastructure investments by state and province total \$2.9 billion.

Specifically for the State Of Wisconsin, Total Port, Terminal and Waterway Infrastructure Investments (in US and Canadian dollars) are shown in **Table 9-33**. Other Midwestern States are also included to provide a regional comparison.

CENTER FOR FREIGHT AND INFRASTRUCTURE RESEARCH AND EDUCATION AND THE MAFC REGIONAL FREIGHT STUDY

The Appleton (Fox Cities) TMA is cooperating to study freight transportation patterns (via road and rail) in Northeast Wisconsin to determine the current and future needs of the areas stakeholders. This research project is sponsored by WisDOT, the National Center for Freight and Infrastructure Research and Education (C-FIRE) at the University of Wisconsin Madison and the Mid-America Freight Coalition (MAFC).

"The ten states (Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Ohio and Wisconsin) of the Mid-America Freight Coalition are undertaking a study of the movement of freight through and within the region. The primary goal of this study is to maximize the benefit that transportation can contribute to regional economic health. The economy of the region is heavily reliant on manufacturing and agriculture, both of which generate significant amounts of freight, both for the inputs and for the products of economic activities. Both of these major economic engines also face major competition from foreign producers. Success in that competition depends in part on producing quality products at competitive prices, but it also depends on the ability to deliver those products to national and international markets at competitive prices. In delivered, or landed, price, transportation can be a significant factor. Any measures that can be taken to make the movement of freight within the region more efficient will

benefit regional producers and the general economy of the region". 39 The states have defined the following objectives for this study⁴⁰:

- The use of transportation and the movement of freight to support and encourage a regional approach to economic development.
- Identification of bottlenecks, particularly at intermodal connections, how they affect freight movements throughout the entire region, and how they might be alleviated.
- Uniformity and consistency applied to freight movements across the regions, especially regarding permitting, truck sizes and weights, and oversize/overweight rules.
- Development of major routes and corridors as regional entities that account for multimodal and intermodal aspects.
- Identification of unused freight capacity in different areas and modes and how this and how this capacity might be better used.
- Support for disaster planning, scenario planning, and incident management when a major node, or corridor, is crippled by forces of man or nature.
- Environmental considerations such as air quality, fuel efficiency, land use, and mitigation of invasive species.

The final results of this study have yet to be published. For more information regarding the MAFC and their work within the region, please consult their website.⁴¹

TRANSPORTATION RESEARCH BOARD: STAKEHOLDER ENGAGEMENT

The mission of the Transportation Research Board (TRB) is to provide leadership in transportation innovation and progress through research and information exchange, conducted within a setting that is objective, interdisciplinary, and multimodal. 42 The TRB recently released a 2014 report titled Integrating Freight Considerations into Collaborative Decision Making for Additions to Highway Capacity. Within this report, the TRB outlines a series of "best practices" that transportation agencies and officials can utilize to better plan and integrate freight ideas and stakeholder engagement into the planning process. The following is a summary of these best practices noted in the report (which could possibly be pursued further by the TMA and its staff)43:

- Nurture "freight champions." Freight champions are individuals with the ability to mobilize interest in advancing freight planning. A freight champion may be a private sector leader, a policy maker, or an individual working for a transportation agency. An important role of the freight champion is to be a face for freight and to build trust and relationships with industry stakeholders.
- Engage early and frequently. Engagement should be conducted early and often, but targeted at key decision points to help conserve resources and avoid stakeholder fatigue, which can cause participants to lose interest in the planning process altogether.

http://midamericafreight.org/. (03/17/14)

 $^{^{39}}$ http://www.wistrans.org/cfire/research/projects/mafc-13/. (03/17/14) Libid. (03/17/14)

http://www.trb.org/AboutTRB/MissionandServices.aspx. (10/2/14)

http://onlinepubs.trb.org/onlinepubs/shrp2/SHRP2 S2-C15-RW-1.pdf. (10/2/14)

- Improve freight planning capacity. Agencies should continue their efforts to improve freight planning knowledge and staff capacity. Stakeholders indicate that freight agency staff with knowledge of freight issues, trends, and operations provide additional value to the outreach and maximize the benefits of stakeholder engagement.
- Collaborate with other agencies. Work with other agencies and organizations to share
 private-sector freight stakeholder input, which sometimes makes its way into the
 planning process through elected officials and others with frequent and direct contact
 with the business community (e.g., chambers of commerce, economic development
 organizations).
- Improve interagency communication. Communications can break down between local, regional, or state government institutions and the DOT and MPO planners related to the highway impacts of new development projects (e.g., BCO purchases property near a highway interchange through an arrangement with local leaders, causing a bottleneck, and DOT is instructed to "make it work"). Inclusion of the MPO in discussions is helpful.
- Assist policy makers. Build their knowledge about supply chain and logistics; helps them connect with freight constituents.
- Focused meetings and materials. Stakeholders respond to plans and products that
 already have been prepared or summarized in a way that minimizes the time they need
 to spend reviewing materials. Stakeholder meetings should be focused with clearly
 defined agendas and action items.
- *Institutionalize outreach.* Establish regular meetings and outreach activities to build relationships and to improve the understanding of freight issues in the jurisdiction.
- Limited but creative engagement is most effective. Use technology, other venues (industry events), focus groups, and so forth. Engagement is dependent on the scale of the freight stakeholder interest in the project. A more robust engagement strategy can be developed for a major truck route improvement versus a commuter route with few trucks.
- **Post and integrate feedback.** Transportation agencies should assimilate feedback from private-sector stakeholders, post it online, and make sure that stakeholders recognize that their valuable feedback is being integrated into the planning documents.

FREIGHT PERFORMANCE MEASURES

Bridges⁴⁴

All of Wisconsin's 13,600 bridges are inspected at least once every two years and sometimes more frequently depending on a bridge's age, traffic load and any known deficiencies or load restrictions. Inspection dates and reports for all Wisconsin bridges can be found on the Highway Structures Information System portion of the WisDOT website.

⁴⁴ http://www.dot.state.wi.us/projects/bridges/. (04/17/14)

There are different types of bridge inspections from routine to in-depth depending on a bridge's individual characteristics and needs. WisDOT's trained bridge inspectors follow Federal Highway Administration (FHWA) standards and guidelines. Some smaller bridges can be inspected on foot, while others require use of a special "reach-all" vehicle with a jointed arm and bucket that provides inspectors an up-close look at the underside of a bridge. Depending on the size of a bridge, weather conditions and other factors, a bridge inspection can take from one hour to more than a week. During bridge inspections, certified inspectors survey:

- The superstructure or beams that support the deck looking for cracks, rust, or any problems with bolts or rivets.
- The substructure units (which support the superstructure).
- Bridge approaches and the deck or surface of the bridge.
- On bridges over large bodies of water, inspections require divers to check supporting piers.

Following a thorough review of the deck, superstructure and substructure, bridges are assigned a "sufficiency rating" number between one and 100. The rating takes into account some 75 factors reviewed during an inspection and also considers a bridge's age, length and width, and the average amount of traffic the bridge handles. WisDOT uses the sufficiency ratings to help prioritize bridge improvements.

Under WisDOT's Local Bridge Improvement Assistance program, municipalities are eligible for rehabilitation funding on bridges with sufficiency ratings less than 80, and replacement funding on bridges with sufficiency ratings less than 50. Each year, all states including Wisconsin are required to submit a report to the FHWA that reviews the condition of its bridges.

Canadian National (CN)

Canadian National (CN), the major railroad company, provides a safety report which documents railroad crossing and trespassing accidents. Crossing and trespassing accidents data on CN railroads was taken directly from their *Leadership in Safety Report* from 2013 and 2014. This data is from the United States and Canada for the years 2010 through 2013. CN's *Leadership in Safety Report* also provides target goals for crossing and trespassing accidents for 2014. **Table 9-34** displays crossing and trespassing accidents for a regional perspective.

Table 9-34: CN Railroad Crossing and Trespassing Accidents U.S. and Canada

Data	2010	2011	2012	2013	2014 Target

Federal Rail Administration (FRA) Office of Safety Analysis

Additionally, the FRA Office of Safety Analysis provides yearly safety data such as: total accidents/incidents, total fatalities, total nonfatal conditions, highway rail accidents/incidents, total fatalities, total nonfatal conditions, number of crossings, public crossings, private crossings, crossings with gates, other active crossings and number of crossings with passive warnings at the county level. **Table 9-35** displays this data for the years 2011 through 2013 for Calumet, Fond du Lac, Outagamie and Winnebago Counties and the State of Wisconsin.

American Transportation Research Institute (ATRI)

The American Transportation Research Institute (ATRI) is a 501(c) (3) non-profit organization that has been engaged in transportation studies and operational tests since 1954. Their mission is to "conduct transportation research with an emphasis on the trucking industries essential role in a safe, efficient, and viable transportation system." Each year ATRI conducts a "top industry issues" survey on behalf of the American Trucking Associations (ATA) which is used to identify and monitor the issues that are important to the industry at a national level. ATRI posts the results of industry surveys on their website. Surveys are available from 2005 to 2013. Over time, it would be beneficial to track the results of this survey and keep current on the trucking industry trends. The results of the 2013 Issues Survey is included below and ranked in order of significance.

CHAPTER 10: MULTIMODAL TRANSPORTATION

INTRODUCTION

This chapter of the Appleton (Fox Cities) LRTP will look at the existing conditions of the TMA and address possible improvements and strategies through the recommendations sections. This Chapter will also provide existing and recommended performance measures as well as funding opportunities and additional resources. Existing data resources such as U.S. Census data, local and regional municipality facility counts and Wisconsin Department of Transportation (WisDOT) materials should be referenced. Additional municipal surveys, existing facility audits and local advocacy and action groups should also be consulted.

The multimodal chapter is designed to be a guide that corroborates existing plans and provides additional resources. This chapter is not intended to supplant existing municipal plans, but provide an additional resource for the planning and implementation process.

The multimodal chapter is designed to be a guide that corroborates existing plans and provides additional resources. This chapter is not intended to supplant existing municipal plans, but provide an additional resource for the planning and implementation process. There are a number of benefits to developing a well-rounded transportation system. Benefits of developing and maintaining these multimodal transportation facilities are well documented and include:

- health benefits:
- · economic benefits;
- · environmental benefits; and
- social benefits.

These multimodal transportation options should remain viable modes for both recreation and active transportation within the urbanized area. The remainder of this chapter documents the existing inventory of bicycle and pedestrian facilities within the Appleton (Fox Cities) TMA as well as lists recommendations regarding future long term projects (proposed and "wish list" items). The inventory and recommendations were primarily provided by the *Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan* which was adopted by ECWRPC Policy Board in October 2014. MPO staff support these recommendations and will work with local municipalities where possible to facilitate their advancement.

DEFINITIONS

The following definitions were defined within the *Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan - 2014* and the *City of Oshkosh Bicycle and Pedestrian Circulation Plan - 2011* and are consistent with WisDOT's Chapter Trans 75 legislation¹:

Bicycle Facilities - are infrastructure improvements such as sharrows, marked bike lanes, and shared use paths (both paved and unpaved). For consistency through the LRTP document, bicycle facilities that are signed or unsigned will not be calculated within the existing facilities section.²

Bike Lanes - A portion of a roadway that has been designated for preferential or exclusive use by bicyclists by pavement markings and signs.

Complete Streets - Roadways designed and operated to enable safe, attractive, and comfortable access and travel for all users, including pedestrians, bicyclists, motorists and public transport users of all ages and abilities.

Multi-Use Trail – a travelway separated and distinct from facilities in the right-of-way which are physically separated from motorized vehicle traffic by an open space or barrier either within the right-of-way or within an independent area. Multi-use trails are typically used exclusively by pedestrians, bicycles or non-motorized users.

Pedestrian – A person on foot, in a wheelchair, on skates or on a skateboard.

Pedestrian Facilities - Defined within the *Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan* as sidewalks or shared use paths (both paved and unpaved).³

Road Diet – A technique in transportation planning whereby a roads number of travel lanes are reduced and/or the effective width of each lane is narrowed in order to achieve systemic improvements

Shared Roadway – a roadway that is officially designated and marked as a bicycle route, but which is open to motor vehicle travel and upon which no bicycle lane is designated.

Sharrow (also known as stripe less bike lanes) – An arrow-like design painted on a roadway to mark a bicycling route. Sharrows are place in the center of a travel lane to indicate that the bicyclist may use the full lane. The name "sharrow" is a contraction of "shared roadway marking."

http://docs.legis.wisconsin.gov/code/admin_code/trans/75. (02/13/15)

² Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan – 2014.

³ Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan – 2014.

EXISTING CONDITIONS

The Appleton (Fox Cities) TMA encompasses 25 municipalities (3 counties, 4 cities, 5 villages, 13 towns), and resides completely within Calumet, Outagamie, and Winnebago Counties, Wisconsin. Existing bicycle and pedestrian facilities are divided into different categories ranging from completed route systems to existing built structures.

Table 10-1: Appleton (Fox Cities) TMA Existing Pedestrian Facility Miles; addresses the total mileage of pedestrian facilities provided within the TMA boundaries. Using the 2010 US Census population data and the total pedestrian facilities data, a measurable percentage metric was developed. The right column shows the total percentage per population and was developed so as to track future facility increases. Total percentage of pedestrian facilities by population (0.47%) within the Appleton (Fox Cities) TMA is comparatively low related to surrounding MPO regions. With a ratio of 4.71miles of sidewalk facilities per 1,000 residents, the TMA as a whole provides pedestrian accommodations. **Map 10-1**: Appleton (Fox Cities) Existing Pedestrian Facilities Map displays the location of pedestrian facilities constructed within the TMA boundary.

The TMA's individual city cores have a well implemented pedestrian network, but as you travel further from the center, available facilities decrease. Several explanations can cause the decrease in pedestrian related facilities. The core of the Appleton (Fox Cities) TMA is dominated by the Cities of Appleton, Menasha, Neenah and Kaukauna and several larger villages and towns including Grand Chute, Little Chute and Kimberly. With each city's policy of developing "urban" style roadways when constructing new or replacing old surfaces, the policy of installing pedestrian sidewalks where necessary is generally followed. This policy has allowed the core area of the TMA to provide large quantities of sidewalk over a longer period of time. The surrounding municipalities have a more "rural" style development model that does not normally facilitate the construction of right-of-way based pedestrian facilities. With smaller municipalities limited ability to fund road construction projects with an "urban" style design, which can be guite costly, often makes the project infeasible. In addition to the cost structure of an "urban" vs "rural" style development, the general tendency of surrounding municipalities is geared towards nodes of commercial development and larger residential neighborhoods separated from those commercial centers. The reliance of the automobile and the increased distance from businesses, most located outside of the local town, to the personal residence does not easily validate the construction of traditional right-of-way based pedestrian facilities. One observation is the higher volume of existing multimodal trails within the towns and villages of the TMA. With recent development trends leaning towards suburban style growth, the implementation of multimodal trail facilities can be provided for within the original build schedule. The ability to plan for large scale pedestrian accommodations is made considerably easier when space is allocated from the start.

Table 10-1 Appleton (Fox Cities) TMA Existing Pedestrian Facility Miles

Source: Population data provided by U.S. Census, 2010; Bicycle data provided by local municipalities in 2013

Table 10-2: Appleton (Fox Cities) TMA Existing Bicycle Facility Miles; displays the quantity of designated bicycle facilities for each municipality and the TMA as a whole. Recent trends moving towards supplying bicycle related facilities have begun to gain momentum. Historically, the use of bicycles and other pedestrian related modes of transportation were the norm. With the advent of the automobile and the increased construction of roads and highways, the pedestrian oriented development model gave way to automobile based development. The importance of the bicycle, pedestrian and complete streets have begun to guide construction in a more smart sustainable fashion. The inclusion of bike lanes or designated facilities is increasing in momentum within the TMA area. As of 2013, a ratio of 0.75 miles of bicycle related facilities per 1,000 residents is provided within the TMA boundary. Existing infrastructure is developing at a faster rate than surrounding regions and provides more substantial transportation based growth along longer regional corridors.

Similar to regional pockets of pedestrian facilities, bicycle facilities are not evenly spaced within the TMA. Several townships and even villages are not implementing facilities at the same rate of growth. The Village of Harrison for example is experiencing faster growth than many of the surrounding communities, but has not implemented additional bicycle facilities or pedestrian facilities at an even rate. This uneven growth trend can be caused by several issues: the political structure within the village may not have the ability or pressure to pursue multimodal facilities. Additionally, the growth pattern is geared towards a residential "sub-division" style expansion. The increases in larger lots with low density do not easily lend itself to a bicycle friendly community structure. The Village of Harrison is but one example of a community that is not keeping up with overall regional trends.

Table 10-2: Appleton (Fox Cities) MPO Existing Bicycle Facility Miles

Communities	Population	Bike Racks (Number)	Bike Lanes x2 (Miles)	Off- Road Paved (Miles)	Off Road Not Paved (Miles)	Total Bicycle Facility (Miles)	Miles Per 1000 Capita

Source: Population data provided by U.S. Census, 2010; Bicycle data provided by local municipalities in 2013

Map 10-2: Appleton TMA Existing Bicycle Facilities; shows the distribution of bicycle facilities within the TMA. As with the pedestrian facilities, the majority of the facilities are located within the higher density core areas. Ongoing regional construction projects and recognizing the importance of a complete streets policy has facilitated the growth of those bicycle facilities.

Two regional outliers that should be noted are the Village of Greenville and the Village of Sherwood. Both communities are implementing multimodal facilities along major corridors. The use of trails to connect regional points of interest is especially evident in Greenville where three different parks, a school and a local YMCA are regionally connected. The uses of trail underpasses were implemented to provide a safe means of crossing State HWY 76.

Map 10-3: Appleton TMA Bike Rack Inventory: shows the existing location of bicycle rack facilities. The increased reliance of the bicycle and the newly implemented bike racks on Valley Transit busing system has represented positive strides towards providing alternative transportation structures. The placement of these structures, to date, has been along major corridors and adjacent to public and private developments. Additional concentrations of bike racks are located near central business districts, near regional points of interest and adjacent to each university/technical college.

Table 10-3: Existing Roadways with Pedestrian and Bicycle Facilities: breaks down the total roadways within the Fox Cities TMA and compares that total to the total mileage of roadways with sidewalks and bicycle facilities. A percentage metric was developed to better understand the total level of complete streets and a comparable between implanted miles to total mileage.

Table 10-3: Appleton (Fox Cities) TMA Existing Roadways with Pedestrian and Bicycle Facilities

	Miles	Percentage
Roadway	1,891	
Roadway with Sidewalk	599	32%
Roadway with Bicycle Facilities	133	7%
Roadway with Sidewalk, Bicycle Facilities, and Transit Routes (i.e. Complete Streets)	23.11	1%

Bicycle and Pedestrian data provided by local municipalities in 2013

It is noted that bicycles are considered vehicles based on Wisconsin State Statute [340.01(5)]⁴ and they can be used on roadways however, consideration should be given to provide space for bicyclists on the roadway as it related to safety.

With ongoing improvements to the USH 441 corridor, many new pedestrian and bicycle facilities will be implemented. The use of diverging diamond underpasses and designated pedestrian and bicycle facilities are being prioritized. All reconstructed overpasses have pedestrian facilities consistent with the State of Wisconsin's Trans 75 guidelines. Bicycle and pedestrian facilities will be provided in the form of wider sidewalks, bike lanes and bike oriented transitions and ramps. These underpasses are consistent with local and regional bike and pedestrian plan recommendations.

⁴ Wisconsin State Statute [340.01(5)] http://docs.legis.wisconsin.gov/statutes/statutes/340/01/5. (9/19/14)

PERFORMANCE MEASURES

Recommended facility improvements should be regularly measured for functionality and sustainability. On an annual basis, it is important to measure the success of multimodal facilities. Performance measure such as facility use metrics and local advocacy measures should be recorded regularly. Performance measures can be categorized into two different fields; intergovernmental measures and local advocacy measures. Intergovernmental measures are guides where infrastructure counts, usage patterns and facility quality analyses are completed. Local advocacy measures look at the use of facilities through alternative means. While Intergovernmental measures look at individual segments of a route, local advocacy measures focus on the rider/walker and the individual metric traits. Examples of each measurable are listed below.

Intergovernmental Measures

Local Measures

Data on regional bike/pedestrian facilities (by mileage) was recently inventoried through the *Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan* in 2014. Miles of facilities of trails and sidewalks were documented. For the Appleton (Fox Cities) TMA, the following mileages were recorded:

- 68.3 miles of bike lanes:
- 101.74 miles of off-road paved trails;
- 23.33 miles of off-road non-paved trails; and
- 1031.56 miles of sidewalks.

In terms of performance measures for the LRTP, it will be important to monitor the status of these mileages for both bicycle/pedestrian facilities. Over time, with the implementation of recommendations of the *Appleton (Fox Cities) TMA and Oshkosh MPO Bicycle and Pedestrian Plan*, the MPO can work to maintain and increase the quantity and quality of the regional multimodal transportation network.

Census Data

US Census Bureau perform regular audits on 5 and 10 year cycles. With data recently collected in 2010, the census is an excellent source for data pertaining to districts and individual census tracts. Regular maintenance of the data is important to receive the highest quality results. Relevant data includes population, density, income metrics, demographics and employment trend data.

Website: www.census.gov

Advocacy Organizations and Partners

Fox Cities Greenways

The Fox Cities Greenways organization was started in January, 1995 and was primarily formed after the STH 441 bridge over Little Lake Butte des Morts was open for bicyclists and

pedestrians before residents were allowed to drive on it. This sparked significant interest among the public about having trail facilities throughout the Fox Cities. The Fox Cities Greenways organization is a 501C3 organization that works with local municipalities, partner organizations, and residents to develop and expand the bicycle and pedestrian network through trails, bicycle facilities, and water trails.

Website: http://www.focol.org/greenways/

Fox Cities Cycling Association

In 2013, the Fox Cities Cycling Association, a subcommittee of the Fox Cities Greenways was develop in an effort to continue to expand and develop bicycle facilities throughout the Fox Cities. The FCCA

has worked with partner organization to organize community rides (i.e. Moonlight Rides, Community Bike Rides, the Fox Valley Bike Challenge Ride, etc.), provide bike valet at the Appleton Farmers Market, educating local residents on the benefits of bicycling and providing advocacy for bicycling. The FCCA also developed the Bicycle Benefits Program, which works with local businesses to provide a discount to those customers who bike to their establishment.

Website: http://www.foxcitiescycling.org/

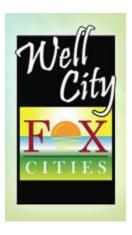

Weight of the Fox Valley

The Weight of the Fox Valley is a three-county initiative to build a community that achieves and maintains a healthy weight at every age. The Weight of the Fox Valley is a movement working together to build a healthier community. Partners include but are not limited to: school districts, government organizations, businesses, and non-profit organizations.

Facebook Site: https://www.facebook.com/WeightoftheFoxValley

Well City Fox Cities and Well City Oshkosh

Well City Fox Cities and Well City Oshkosh is part of a national movement to build healthier communities. This innovative program was created in 1991 by the Wellness Council of America (WELCOA), a national non-profit organization and leading resource for health and wellness promotion. To build healthier communities and earn the Well City designation, local businesses team up, pledging to earn Well Workplace designations within three years. It requires 20% of a community's population to be employed by Well Workplace Award-

winning companies/organizations.

Website: Well City Fox Cities http://www.wellcityfoxcities.com/about-us.html; Well City Oshkosh http://www.welloshkosh.com/Home

Activate Fox Cities

Activate Fox Cities is a wide ranging group of Fox Cities organizations that have joined together to encourage people in our community to get moving and live healthier. Activate Fox Cities is part of a national effort led by the YMCA of the USA, known as Activate America: Pioneering Healthy Communities, a project that engages key community stakeholders to develop strategies that reduce barriers and increase support for healthy living in the Fox Cities. Their plan is to educate,

motivate, and facilitate long-term collaboration with business, government, schools, communities, neighborhoods, social service agencies and the media toward making the Fox Cities a healthier place to live, work, and play.

Website: http://www.ymcafoxcities.org/activatefoxcities/INDEX.HTM

Local Advocacy Measures

Fox Cities Bike Challenge

The League of American Bicyclists in partnership with Kimberly-Clark Corporation sponsors a national event known as the National Bike Challenge. This annual event is a free and interactive way for bicyclists across the country to log the number of miles they ride for sport/recreation and for active transportation (work, errands, etc.). At the local level, the Fox Cities Cycling Association participates in this national event by hosting its own cycling challenge: Fox Cities Bike Challenge. As part of the National Bike Challenge, individuals and groups can participate by logging the number of miles they ride with their bicycles. The official bicycle challenge period begins May 1st and runs through September 30th each year. Riders are automatically eligible for prizes and awards simply by recording the number of miles they ride.

In terms of performance measures for the LRTP, staff will monitor the local miles ridden as part of the Fox Cities Cycling Association/Fox Valley Bike Challenge. For the 2014 Challenge, local participants (2,305 riders) accounted for:

- 995,517 miles (approximately 2 round trips to the moon)
- 53,963,816 calories burned
- \$562,457 dollars saved
- 895,965 pounds of CO₂ saved

FUNDING

Primary funding for multimodal facilities and pedestrian and bicycle improvements should be budgeted annually within each municipality. It is critical that the municipality provide funding for pedestrian based improvements. In point of fact, many grant and funding opportunities require a percentage based match. An example of a required match is the 20% match for most Surface

Transportation Program-Urban (STP-Urban) grants. STP-Urban awards require that 20% of the overall project cost be funded through local funds. The remaining 80% of the project cost will then be awarded (federal funds). The purpose of the match based system is to ensure that local municipalities show a willingness to fund the improvements they request and that funds are not awarded and subsequently unused.

Funding options are available from a wide range of sources and endowments. With many funding resources having strict requirements on inclusions and implementation procedures, the overall cost of the project can see a large increase. It is prudently recommended that all parties interested in obtaining alternative funding resources contact the administrator of the funds or ECWRPC and WisDOT to gain additional information and assistance on funding requirements and matching totals. Listed below is a brief list of available funding resources relevant to the Appleton (Fox Cities) TMA. This list is but a small sample of the opportunities available and represents a wide range of federal, state and private opportunities.

Local Capital Improvement Programs (CIPs)

As local streets are scheduled for reconstruction or resurfacing, bicycle and pedestrian accommodations should be considered by the local municipality. It is much more cost efficient to include bicycle and pedestrian accommodations as part of the project versus trying to retrofit once the project is completed. The costs of bicycle and pedestrian accommodations can then be built into the cost of the project.

Surface Transportation Program – Urban (STP-Urban)

The Surface Transportation Program – Urban (STP-Urban) allocates federal funds to complete a variety of improvements to federal-aid-eligible roads and streets in urban areas. All projects must meet federal and state requirements. Communities are eligible for funding on roads that are functionally classified as a major collector or higher. Metropolitan Planning Organizations (MPOs) and the Wisconsin Department of Transportation (WisDOT) coordinate with local municipalities to select projects that are eligible for STP-Urban funds. The Appleton (Fox Cities) and Oshkosh MPO have worked with the Technical Advisory Committee (TAC) to develop selection criteria for projects that are eligible (see the Appleton (Fox Cities) Transportation Improvement Program and the Oshkosh Transportation Improvement Program for more information). In the past STP-Urban Infrastructure Projects that have been awarded funds have included bicycle and pedestrian accommodations. In the future it is recommended that the Appleton (Fox Cities) TMA and Oshkosh MPO also consider funding non-infrastructure projects (i.e. education, encouragement, enforcement, and evaluation projects) through STP-Urban funds. The federal funding ration for STP-Urban projects is usually 80% federal funds, 20% local funds.

Website: http://www.dot.wisconsin.gov/localgov/highways/stp-urban.htm

Transportation Alternatives Program (TAP)

The Transportation Alternatives Program (TAP) is a new legislative program that was authorized in 2012 by federal transportation legislation, Moving Ahead for Progress in the 21st Century Act (MAP-21). Projects that meet eligibility criteria for the Safe Routes to School Program,

⁵ Wisconsin Department of Transportation (WisDOT) Surface Transportation Program: http://www.dot.wisconsin.gov/localgov/highways/stp-urban.htm.

Transportation Enhancements, and/or the Bicycle and Pedestrian Facilities Program will be eligible TAP projects. The funding ratio is usually 80% federal funds, 20% local matching funds.

In MAP-21, MPOs with populations over 200,000 (or Transportation Management Areas – TMAs) will now have the ability to select and award TAP projects at the local level. The Appleton (Fox Cities) TMA has an annual federal allocation of \$314,140 annually to award to TAP projects. WisDOT also coordinates a statewide TAP grant cycle for projects that are not located within the TMAs.

With the changes in the Transportation Alternatives Program, the Safe Routes to School projects now require a 20% local match. This local match may be difficult for smaller local municipalities to obtain and it is recommended that local municipalities work with private entities or a variety of municipality departments to help fund the 20% match.

Website: http://www.dot.state.wi.us/localgov/aid/tap.htm

Highway Safety Improvement Program (HSIP)

The Highway Safety Improvement Program (HSIP) is to develop and implement, on a continuing basis, stand-alone safety projects designed to reduce the number and severity of crashes on all streets and highways (both state and local). The federal funding ratio for the HSIP funds is usually 90% federal and a 10% match of state and/or local funds. The HSIP Program currently prioritizes sites that have experienced a high crash history with an emphasis on low-cost options that can be implemented quickly.⁷

Website: http://www.dot.wisconsin.gov/localgov/highways/hsip.htm

Recreational Trails Aid Program (RTA)

The Recreation Trails Program provides funds to develop and maintain recreational trails and trail-related facilities for both non-motorized and motorized recreational trail uses. The Moving Ahead for Progress in the 21st Century Act (MAP-21) reauthorized the Recreational Trails Program through federal fiscal years 2013 and 2014 as a set-aside from the Transportation Alternatives Program.

Website: FHWA - http://www.fhwa.dot.gov/environment/recreational_trails/index.cfm WDNR - http://dnr.wi.gov/aid/rta.html

Metropolitan Planning (PL) Funds

Metropolitan Planning (PL) Funds provides federal funding under MAP-21 to metropolitan planning organization to carry out the federal transportation planning activities within a MPO area. The primary purpose of these funds is for the administration of the MPO process including the development of a regional multi-modal long range transportation plan and the transportation improvement program. MPOs over 200,000 in population will also administer the Transportation Alternatives Program and Congestion Management Process. Funding can be used for sub-

⁶ Wisconsin Department of Transportation (WisDOT) Transportation Alternatives Program: http://www.dot.state.wi.us/localgov/aid/tap.htm.

Wisconsin Department of Transportation (WisDOT) Highway Safety Improvement Program (HSIP): http://www.dot.state.wi.us/localgov/highways/hsip.htm.

regional and other modal planning activities including plans, studies, and programs for bicycle and pedestrian accommodations.

EPA "Climate Showcase Communities" Grants

The Environmental Protection Agency (EPA) announced the availability of up to \$10 million in first-of-its-kind, "Climate Showcase Communities" grants to local and tribal governments to establish and implement climate change initiatives that will help reduce greenhouse gas emissions. The agency awards cooperative agreements, each one ranging from \$100,000 to \$500,000. Approximately 5 percent of the funds are set-aside for tribal governments. The EPA requests proposals from local governments, federally recognized Indian tribal governments, and inter-tribal consortia to efficiently reduce greenhouse gas emissions, and improve the environmental, economic, public health, and social conditions in a community.

Website: http://www.epa.gov/statelocalclimate/local/showcase/index.html

U.S. Department of Housing and Urban Development (HUD) Community Development Block Grants (CDBG)

The CDBG program provided eligible metropolitan cities and urban counties (called "formula communities") with annual direct grants that they can use to revitalize neighborhoods, expand affordable housing and economic opportunities, and/or improve communities facilities and services, typically to benefit underserved communities (low- and moderate-income communities). Eligible activities include building public facilities and improvements, such as streets, sidewalks, sewers, water systems, community and senior citizen centers, and recreational facilities.⁸

Website:

http://portal.hud.gov/hudportal/HUD?src=/program_offices/comm_planning/communitydevelopment/programs

The Robert Wood Johnson Foundation

The Robert Wood Johnson Foundation seeks to improve the health and health care of all Americans. One of the primary goals of the Foundation is to "promote healthy communities and lifestyles." Specifically, the Foundation has an ongoing "Active Living by Design" grant program that promotes the principles of active living including non-motorized transportation. Other related calls for grant proposals are issues as developed, and multiple communities nationwide have received grants related to promotion of trails and other non-motorized facilities.

Website: http://www.rwjf.org/en/grants.html#q/maptype/grants/ll/37.91,-96.38/z/4

Fox Cities Visitors Bureau and Convention Center - Tourism Development Grant Fund

Since its inception, the Fox Cities Convention and Visitors Bureau has allocated a percentage of its room tax revenue for the development or expansion of visitor attractions and amenities through a grant program previously called the *Capital Development Grant Program*. Since 2011,

⁸ U.S. Department of Housing and Urban Development: http://portal.hud.gov/hudportal/HUD?src=/program_offices/comm_planning/communitydevelopment/programs.

the grant program is referred to as the *Fox Cities Tourism Development Grant Program*. During the Bureau's 25 year history it has made nearly \$7.0 million in grants through the program. Grants have ranged between \$2,500 and \$1,000,000. As a general rule the Tourism Development Grant Committee does not fund elements of trail construction projects. There are, however, rare exceptions where a trail project will be considered under the capital project category. Most often these will be unique or unusual crossings or bridges that are key to the success of a particular trail project. This includes a grant for the Herb and Dottie Smith Park Trail Trestle Bridge Project of \$50,000 and the Friendship Trestle Trail.

Public Private Partnerships

As federal and state funds become more competitive for local communities, it is recommended that local municipalities work with the private sector to help secure funds for various types of bicycle and pedestrian projects. The private sector could help to provide the 20% local match for state grant programs, making the local grant application more competitive for funding.

Additionally, local businesses have a vested interested in bicycle and pedestrian accommodations, as healthy active employees help to reduce the businesses health insurance costs and the employees are also more productive. Local health insurance companies are interested in having healthy residents, as it reduces the health insurance claims related to chronic diseases. Private and public partnerships should be explored by local municipalities as the built environment as a direct correlation with the health of local residents.

Table 10-4: Quick Reference Funding Source Summary Table summarizes the main points of the provided list and categorizes the main points of each funding resource into one guide.

Table 10-4: Quick Reference Funding Source Summary Table

	Table	10-4. Quick	Reference Funding	Source Summary Table	
Funding Program	Source	Agency	Primary Purpose	Eligibility	Match Requirements
Surface Transportation Program (STP)	Federal	MPO/WisDOT	Construction, resurfacing, and operational improvements for highways and bridges, including transit and other modes.	Construction of pedestrian/bicycle transportation facilities; Non-construction projects for safe bicycle use; Upgrade public sidewalks to comply with ADA standards.	80% Federal / 20% Local
Transportation Alternatives Program (TAP)	Federal	Local / Appleton TMA / WisDOT			80% Federal / 20% Local
Recreational Trails Aids Program (RTA)	Federal	WDNR	Develop and maintain recreational trails and trail related facilities for non-motorized and motorized recreational trail uses.	Motorized and non-motorized trails. Eligible categories are trail maintenance and rehabilitations, trailside or trailhead facilities, construction and maintenance equipment, trail construction, trail assessments, and trail safety and environmental protection education.	80% Federal / 20% Local
Highway Safety Improvement Program (HISP)	Federal	WisDOT	Reduction in traffic fatalities and serious injuries on public roads	Improvements for pedestrian/bicyclist safety; Construction of yellow-green signs at pedestrian/bicycle crossings and in school zones. Correction of hazardous locations including roadside obstacles, railway-highway crossing needs, and poorly marked roads that constitutes a danger to bicyclists/pedestrians. Highway safety improvement projects on bicycle/pedestrian pathways or trials.	90% Federal / 10% Local
Metropolitan Planning (PL) Funds	Federal	MPO	Funds are for MPOs to carry out federal transportation planning activities within the MPO area. Activities include administering the MPO process, development of a regional multimodal long range transportation plan, and maintaining a multiyear transportation improvement program.	Funding can be used for region, sub-regional, and other modal planning activities including plans, studies, and programs for bicycle and pedestrian improvements.	80% Federal / 20% Local
EPA "Climate Showcase Communities" Grants	Federal	EPA	Assist local governments in developing plans, conducting demonstration projects, and implement projects that reduce greenhouse gas (GHG).	Activities must achieve reductions in GHG emissions by addressing one of ten priority areas including land use, transportation, and community planning and include reductions in vehicle miles traveled.	50% Federal / 50% Non- Federal
Community Development Block Grant (CDBG)	Federal	City/HUD	Directly provides funds to cities and towns for projects with community-wide benefits. Activities must benefit low to moderate income communities.	Sidewalks, greenways, trails, and bicycle facilities that provide increased safety, access, and transportation options.	100% Federal
Bikes Belong Coalition	Private	Bikes Belong Coalition	Bikes Belong will accept requests for funding of up to \$10,000 for facility and advocacy projects.	Fundable projects include paved bike paths and rail-trails as well as mountain bike trails, bike parks, BMX facilities, and large-scale bicycle advocacy initiatives.	None, but encouraged.

Funding Program	Source	Agency	Primary Purpose	Eligibility	Match Requirements
Robert Wood Johnson Foundation (RWJF)	Private	RWJF	Active Living Research – supports research to identify promising policy and environmental strategies for increasing physical activity, decreasing sedentary behaviors and preventing obesity among children and adolescents.	Active Living Research supports research examining how environments and policies impact physical activity, especially among ethnic minorities and children living in low-income communities. Findings are expected to inform environmental and policy changes that will promote active living among children and families.	Varies

RECOMMENDATIONS

The recommendations section of the Chapter 10: Multimodal Transportation is intended to provide thoughtful recommendations that rely on already established local and state plans and documents. With ten different municipalities including town, city, county, and state represented, these recommendations stress the importance of intergovernmental cooperation and the understanding that pedestrian flow does not follow local municipal boarders, but is a system of networks that follow commercial, residential, industrial and recreational corridors and nodes. A consistent theme and ongoing cooperation is vital to provide high a quality multimodal infrastructure network.

This chapter recognizes that many different experience and skill levels may be present. Special consideration should be made to who will be using the designed facility and what the skill level of the user may be. Different intensities such as the inclusion of on street facilities like bike lanes or sharrows versus multi-use trails or pathways should be considered and who the target user is. Different users have different needs on the same corridor. It is important that the type of user be understood and facilities implemented with a complete streets policy in mind.

The recommendations made within this chapter are derived by the inclusion of existing bicycle and pedestrian documents or complete streets policies. Every attempt has been made to include existing plan recommendations and documents. See the Additional Resources section for a list of existing bicycle and pedestrian documents.

Infrastructure Improvements

As mentioned above, bicycle and pedestrian systems should be closely tied to existing nodes of influence. Whenever possible, multimodal facilities should be located within the right-of-way with bicycle facilities on the roadway. Riding a bicycle on the sidewalk can be more dangerous because of driveways, close proximity to walking pedestrians, decreased visibility and greater points of conflict at existing intersections. A bicycle on the roadway, though closer to moving traffic, is still considered safer than travelling along the sidewalk where vehicles don't generally look for bicycle traffic.

Recommended infrastructure improvements are categorized into three different sections; existing, planned, and recommended facilities:

- Existing Facilities: include sidewalks, shared use paths, bike lanes, and sharrows.
- **Planned Facilities:** are facilities that have funding committed to them or the facilities are included in a previously recorded map document.
- Recommended Facilities: are facilities that were identified as needed connections throughout the planning process.

The Regional Bicycle and Pedestrian Network was facilitated through the development of the *Appleton (Fox Cities) TMA and Oshkosh MPO Regional Bicycle and Pedestrian Plan – 2014.* The network can be found on **Maps 10-4 and 10-5**. Each map is broken into these three major categories with Parks and the Appleton (Fox Cities) TMA boundary delineated. Additional features of the map include Regional Network recommendations that will need multiple municipalities and regional cooperation for successful completion. The recommended facilities and regional network features stress the importance of connecting known points of interest to existing and planned infrastructure facilities. Regional centers, points of interest and existing

facilities should be reviewed for plan consistency and used as the starting points for new infrastructure installation. Bicycle and pedestrian infrastructure can be successful only if the system as a whole has a start and end point connected to points of value and has an interconnecting system of routes.

Non-Infrastructure Improvements

Non-infrastructure improvements are centered on the "5-E" concept. The "5-Es" (Education, Encouragement, Enforcement, Engineering and Evaluation) look at the overriding process of providing complete multimodal facilities. Sound planning principals recognize that it takes more than infrastructure installation to produce a high quality product.

- **Education** encompasses all efforts to teach, train, and facilitate discussion regarding safe driving, cycling, and walking skills and techniques and is an important role of raising the awareness of multiple road users.
- **Encouragement** activities are those that motivate people to choose walking or biking to make trips rather than driving a car. Often times, these activities are coordinated for broad impacts across municipal boundaries.
- **Enforcement** identifies the needed cooperation of law enforcement officials, legislative bodies, and judicial systems to insure equitable application of the law, respecting the right and responsibilities of motorists, cyclists, and pedestrians alike.
- Engineering refers to any physical improvement intended to enhance the safety of cyclists and pedestrians.
- **Evaluation** refers to data collection and methods of analysis used to identify proper us and provide justification for future developments and programs.

Complete Streets Improvements

A complete streets policy is defined as a section of right-of-way that addresses all the needs of the user in an attractive and functional manner. Complete streets emphasize multiple modes of transportation along the same section of roadway and include bicycle, pedestrian, mass transit and traditional automobile based transportation.

The State of Wisconsin – Department of Transportation recognized the importance of the complete streets policy and in 2009 developed Trans 75. Trans 75 is a program where the Wisconsin DOT will require that all state and county projects receiving tax dollar funding will provide accommodations for all modes of transportation to be accounted for and provided when appropriate. Many municipalities around the country have active complete streets policies. As of 2014, only the Town of Grand Chute; Outagamie County, WI has a complete streets policy within the east central Wisconsin region.

Figure 10-1: Complete Streets Diagram

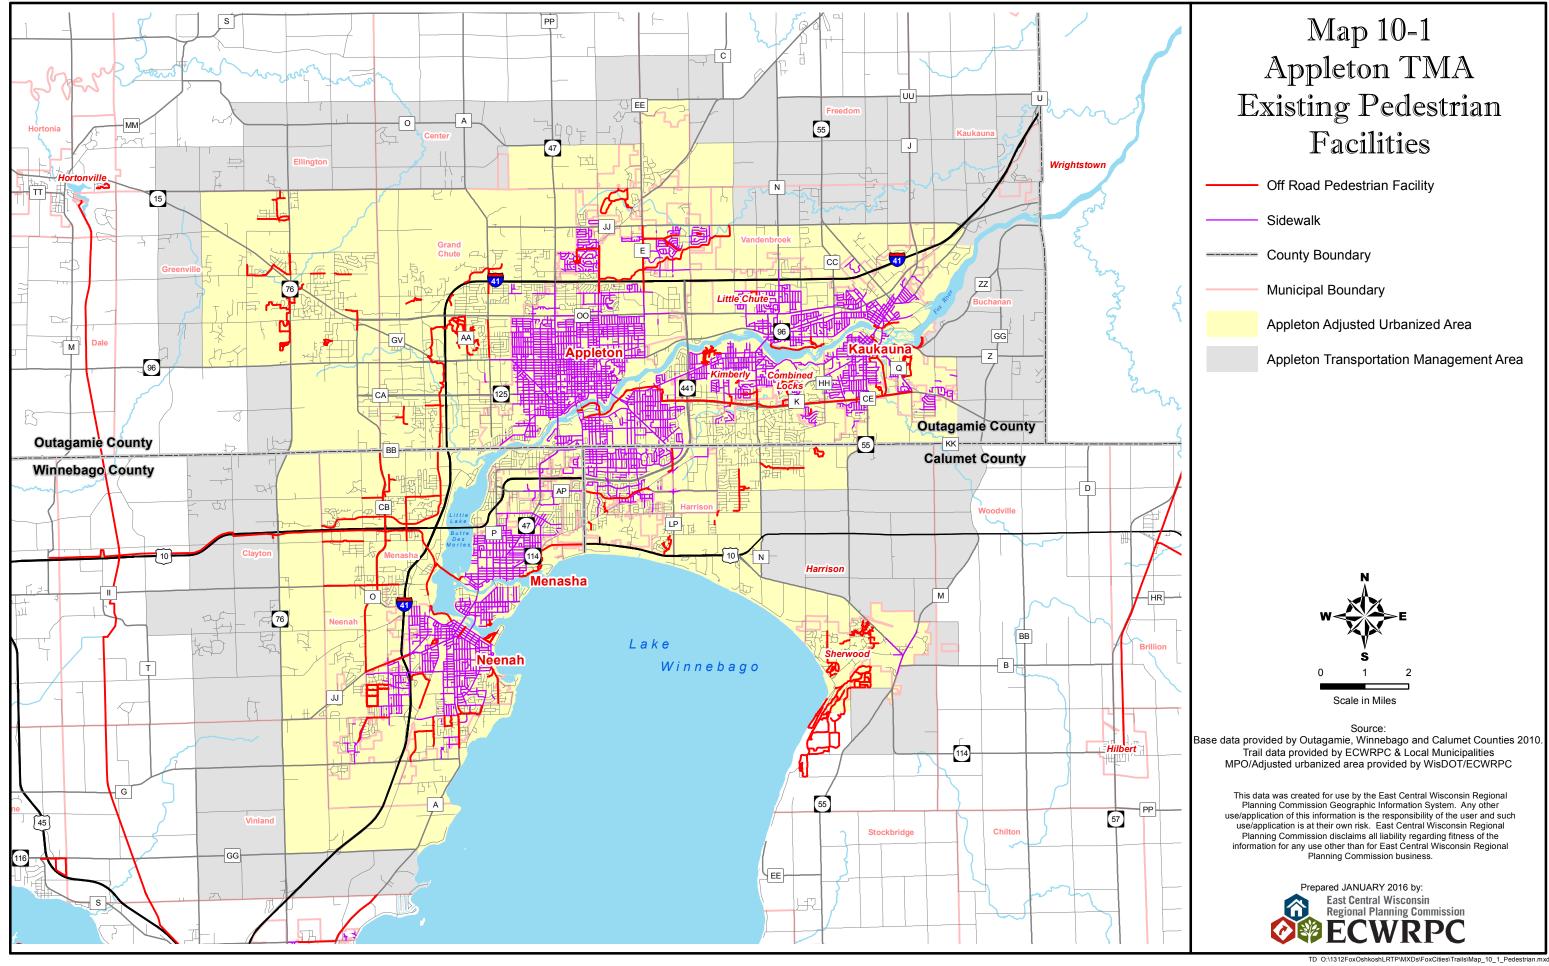

Figure 7-1: Complete Streets Policy with Dedicated Bus Lanes

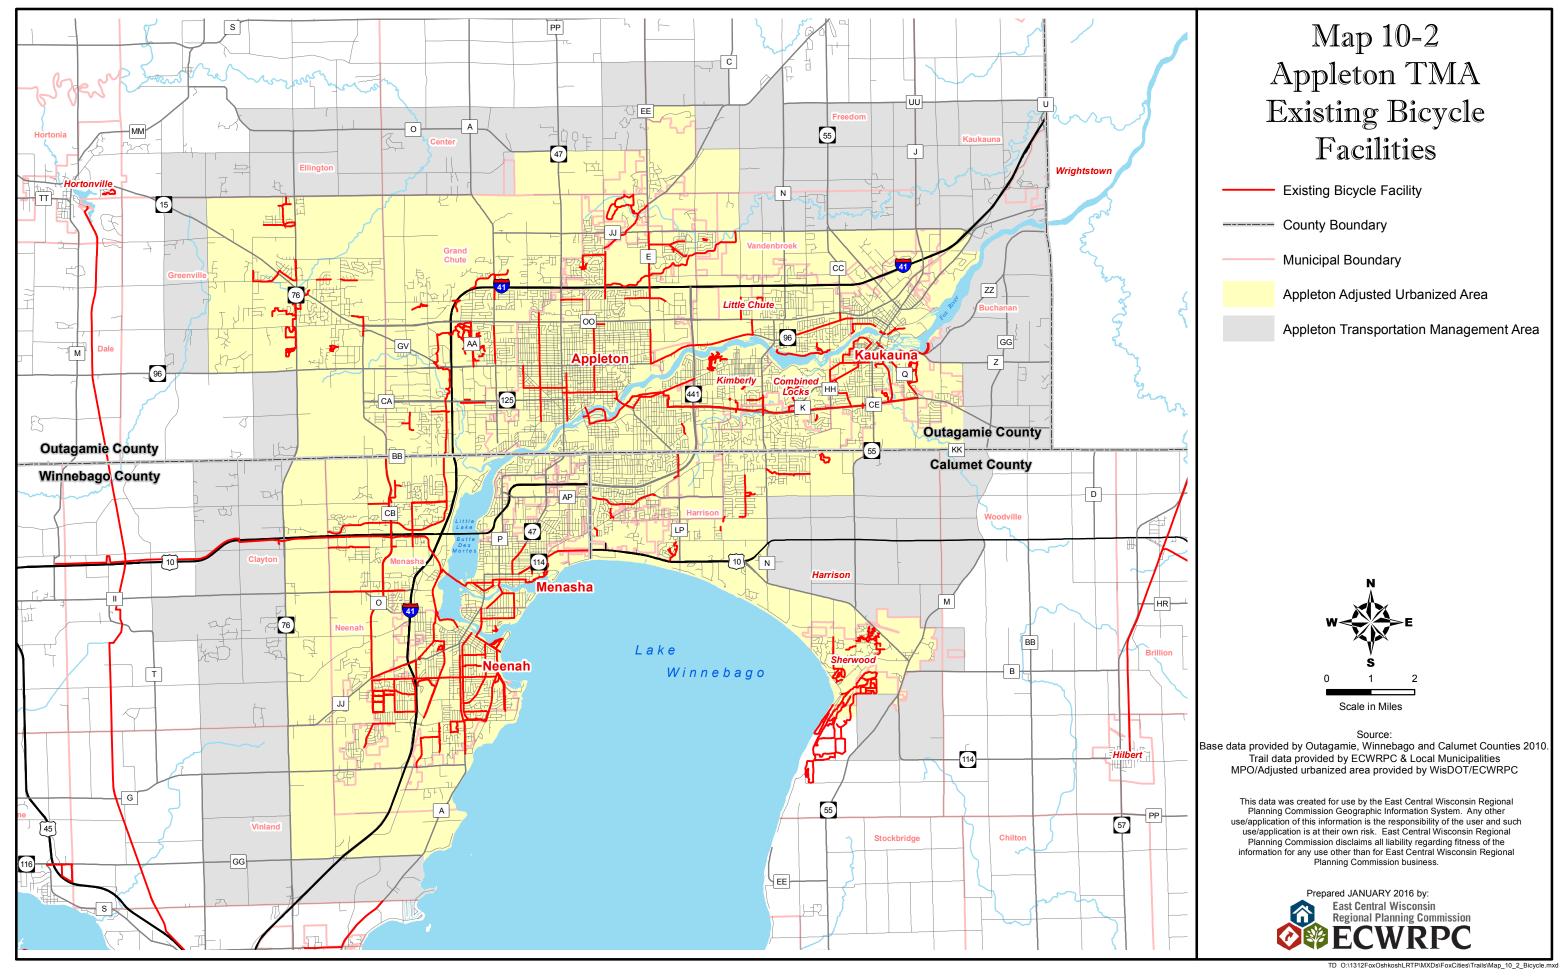

Complete streets allocate space within the right-of-way for all users. Note the designated bus median and the bicycle boulevard that separates automobile traffic from other street users. The end result is an efficient green approach to right-of-way design.

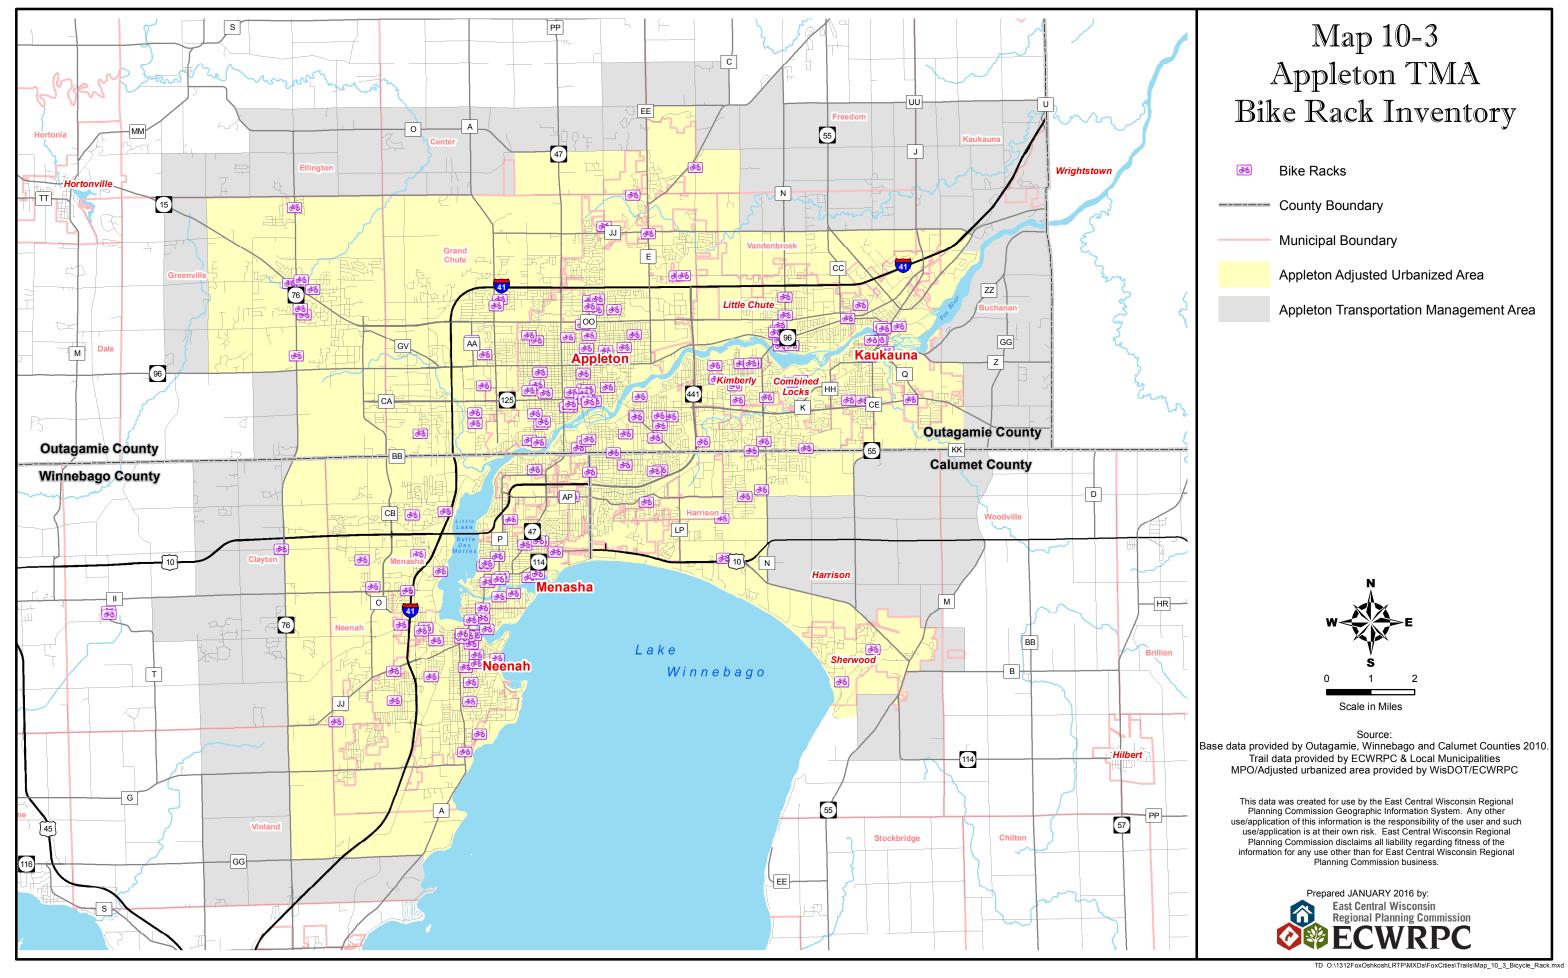

Image curtesy of www.nacto.org/usdg/dedicated-median-bus-lanes/

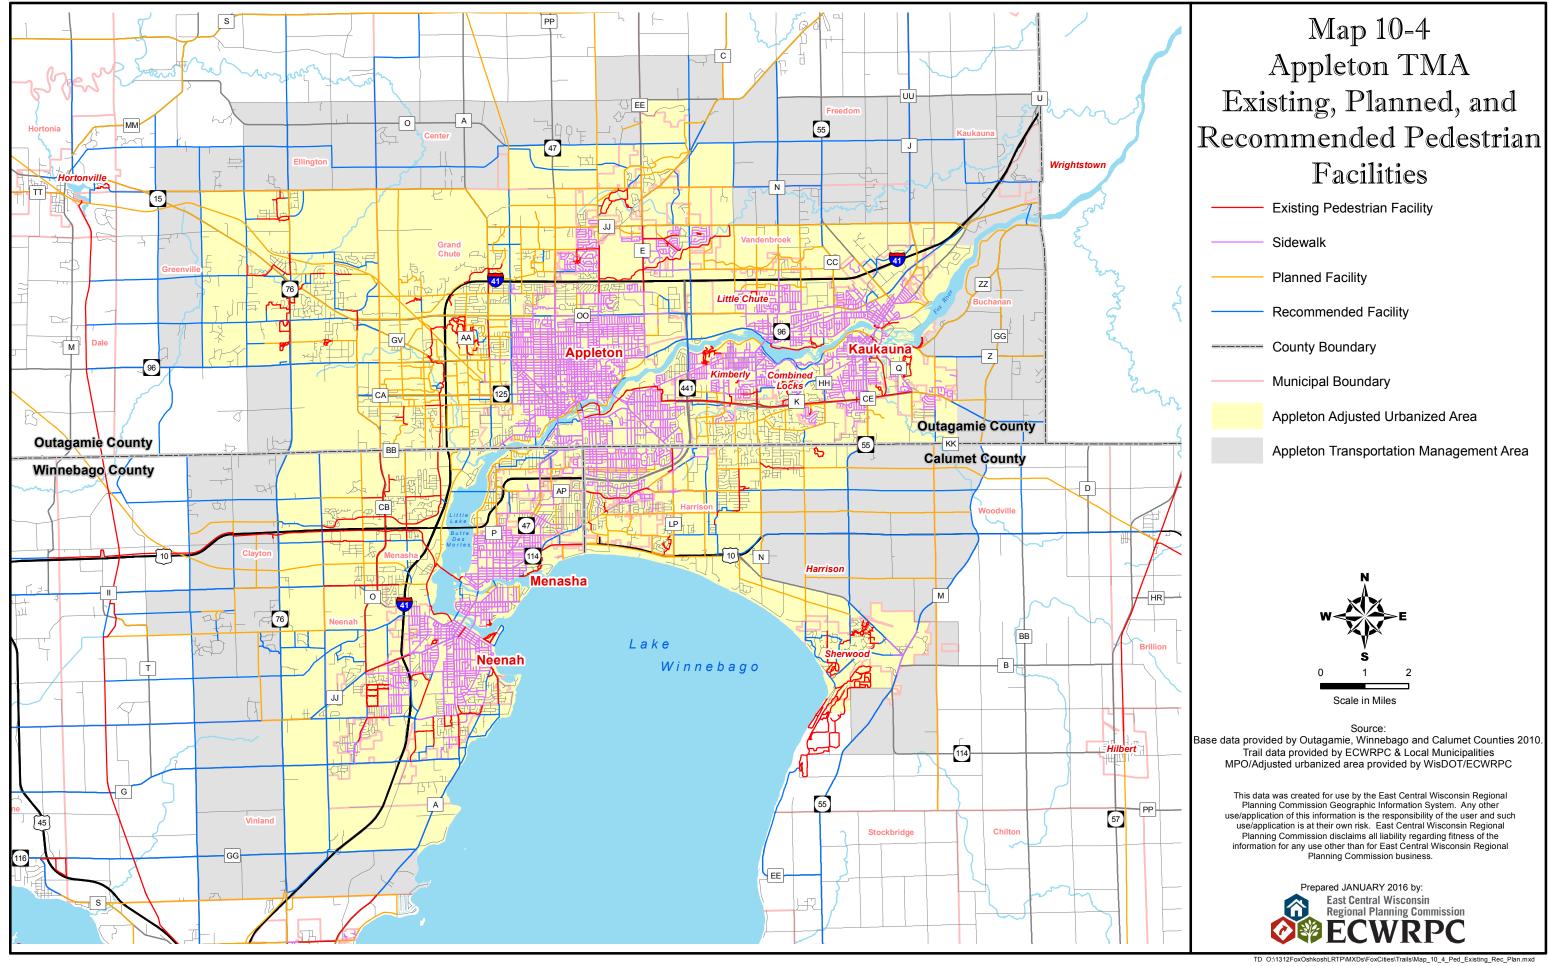

It is recognized that not every street within the Appleton (Fox Cities) TMA or individual municipalities will have the complete streets designation; there are simply too many roads. Instead, a complete streets policy should be adopted for each municipality that describes in detail the policies to be followed for the construction of new or reconstruction of existing right-of-ways. A street can still provide for the needs of the area and have many of the pieces inherent within a complete street with little to no additional cost to the development. It is recommended that pedestrian facilities be installed within all urban roads and major corridors both rural and urban. Additional multimodal facilities should be constructed where possible along all right-of-way corridors that connect major point of commercial, industrial, recreational and residential uses. Schools, parks and places of gathering should also be connected using the complete streets model.

CHAPTER 11: SAFE ROUTES TO SCHOOL

INTRODUCTION

Safe Routes to School (SRTS) is a national and international initiative to create safe, convenient and fun opportunities for children to bicycle and walk to and from school. The goal of the program is to enable and encourage children Kindergarten-8th grade, including those with disabilities, to walk and bike to school.

SAFE ROUTES TO SCHOOL EAST CENTRAL WISCONSIN

The primary purposes of the Safe Routes to School program are as follows:

- 1. to enable and encourage children, including those with disabilities, to walk and bicycle to school:
- 2. to make bicycling and walking to school a safer and more appealing transportation alternative, thereby encouraging a healthy and active lifestyle from an early age; and
- 3. to facilitate the planning, development, and implementation of projects and activities that will improve safety and reduce traffic, fuel consumption, and air pollution in the vicinity (approximately 2 miles) of primary and middle schools (Grades K-8).¹

THE 5 E'S OF SRTS

Comprehensive SRTS programs focus on the "5 E's"; engineering, encouragement, education, enforcement, and evaluation. Planning efforts assess the pedestrian and bicycle facilities at and around schools, how students are traveling to school, and concerns or issues parents and the community have with students walking and/or bicycling to school. Recommendations are formed and then implemented by communities, participating schools, and parents.

Education

Education on bicycle and pedestrian safety for students, parents, and the community is essential when implementing a SRTS program. Education efforts teach children how to be safe pedestrians and bicyclists and teach drivers how to make the environment around the schools safer for children. Bike rodeos or other community events can teach students and parents the proper bicycling safety tips. Parents and community members are further educated about the East Central Regional SRTS program initiatives through local news media, social media platforms such as Facebook, Twitter and YouTube and East Central's SRTS website Www.eastcentralsrts.org.

¹ http://www.fhwa.dot.gov/environment/safe routes to school/overview/. (1/5/15)

Encouragement

Encouragement strategies are used to show that walking and biking to school can be a safe, fun, healthy and exciting. This is done through a variety of one time and on-going events and activities such as Walk to School Day, Bike to School Day, Walking School Bus Program, frequent walker clubs and more to promote walking and biking to school throughout the community.

Enforcement

Enforcement strategies increase awareness of children walking and biking to school, improve driver behavior, and teach children to follow traffic rules by partnering with local law enforcement to ensure traffic laws are obeyed in the vicinity of schools. A community approach to enforcement involves not only law enforcement officers but also students, parents, teachers, and crossing guards.

Engineering

Engineering strategies create safer environments for walking and bicycling to school through improvements to the infrastructure surrounding schools. These improvements focus on reducing motor vehicle traffic speeds and conflicts with pedestrians and bicyclists, and establishing safer and fully accessible crossings, walkways, trails and bikeways. Engineering efforts can include increased signage, lighting, bike lanes, sidewalks, crosswalks, or curb ramps.

Evaluation

Evaluation is an important component of SRTS programs that can be incorporated into each of the other E's. SRTS programs can be evaluated through bike and walk audits around schools, parent surveys and student arrival and departure tallies. Collecting data before and after program activities or projects are implemented allow communities to track progress and provide information to guide program development.

Together, all of these components create a comprehensive approach to implementing a Safe Routes to School program and increase the number of students walking and biking to and from school.

WHY SAFE ROUTES TO SCHOOL

Safety

Safe Routes to School projects focus on infrastructure improvements, student traffic education, and driver enforcement that improve safety for children, many of whom already walk or bicycle in unsafe conditions.

 Pedestrians are more than twice as likely to be struck by a vehicle in locations without sidewalks.²

² R. Knoblauch, B. Tustin, S. Smith, and M. Pietrucha. "Investigation of Exposure-Based Pedestrian Accident Areas: Crosswalks, Sidewalks, Local Streets, and Major Arterials." Washington DC: US Dept. of Transportation; 1987.

- In 2009, approximately 23,000 children ages 5-15 were injured and more than 250 were killed while walking or bicycling in the United States.³
- From 2000-2006, 30% of traffic deaths for children ages 5-15 occurred while walking or bicycling.⁴
- The medical costs for treating children's bicycle and pedestrian fatalities cost \$839 million in 2005 and another \$2.2 billion in lifetime lost wage costs.⁵
- A safety analysis by the California Department of Transportation estimated that the safety benefit of SRTS was up to a 49 percent decrease in the childhood bicycle and pedestrian collision rates.⁶

Health and Obesity

Children today are simply not getting enough physical activity, contributing to growing rates of obesity and obesity-related health problems, such as diabetes. Safe Routes to School projects make it safer for more children to walk and bicycle to school, which will help address this obesity crisis among children by creating increases in physical activity.

- Over the past 40 years, rates of obesity have soared among children of all ages in the United States, and approximately 25 million children and adolescents—more than 33%—are now overweight or obese or at risk of becoming so.⁷
- Kids are less active today, and 23% of children get no free time physical activity at all.⁸
- The prevalence of obesity is so great that today's generation of children may be the first in over 200 years to live less healthy and have a shorter lifespan than their parents. 9
- Today, approximately one-quarter of health care costs in the United States are attributable to obesity,¹⁰ and health care costs just for childhood obesity are estimated at approximately \$14 billion per year.¹¹

- People living in auto-oriented suburbs drive more, walk less, and are more obese than people living in walkable communities. For each hour of driving per day, obesity increases 6 percent, but walking for transportation reduces the risk of obesity. 12
- Walking one mile to and from school each day is two-thirds of the recommended sixty minutes of physical activity a day. Plus, children who walk to school have higher levels of physical activity throughout the day. 13 14

Environment

Safe Routes to School projects increase the number of children walking and bicycling to school, which also cuts down on the number of cars. As cars emit pollutants for each mile traveled, reducing traffic can improve the quality of air that children breathe in and around their schools.

- Children exposed to traffic pollution are more likely to have asthma, permanent lung deficits, and a higher risk of heart and lung problems as adults. 15
- Over the last 25 years, among children ages 5 to 14, there has been a 74 percent increase in asthma cases. 16 In addition, 14 million days of school are missed every year due to asthma.17
- One-third of schools are in "air pollution danger zones." 18
- Schools that are designed so children can walk and bicycle have measurably better air quality. 19
- A 5% increase in a neighborhood's "walkability" reduces vehicle miles traveled by 6%.²⁰
- Returning to 1969 levels of walking and bicycling to school²¹ would save 3.2 billion vehicle miles, 1.5 million tons of carbon dioxide and 89,000 tons of other pollutants²² equal to keeping more than 250,000 cars off the road for a year.

Traffic Congestion

Neighborhoods are becoming increasingly clogged by traffic. By boosting the number of children walking and bicycling. Safe Routes to School projects reduce traffic congestion.

- Within the span of one generation, the percentage of children walking or bicycling to school has dropped precipitously, from approximately 50% in 1969²³ to just 13% in 2009^{24}
- While distance to school is the most commonly reported barrier to walking and bicycling²⁵, private vehicles still account for half of school trips between 1/4 and 1/2 mile²⁶—a distance easily covered on foot or bike.
- In 2009, American families drove 30 billion miles and made 6.5 billion vehicle trips to take their children to and from schools, representing 10-14 percent of traffic on the road during the morning commute.²⁷
- A California study showed that schools that received infrastructure improvements through the Safe Routes to School program yielded walking and bicycling increases in the range of 20 to 200 percent.²⁸

Bus Transportation Costs

Schools often make cutbacks in bus routes to save money—meaning that more children will be walking and bicycling in potentially unsafe conditions, or more parents will drive their children, which increases traffic congestion and air quality concerns.

- Approximately 55% of children are bused, and we spend \$21.5 billion nationally each year on school bus transportation, an average of \$854 per child transported per year.²⁹
- Eliminating one bus route, based on average per-pupil expenditure and average number of pupils per bus, would save a school district approximately \$45,000 per year.³⁰
- Nationwide, approximately 22 percent of school districts made busing reductions during the 2010-2011 school year due to fuel price increases. 31 32

HISTORY AND FUNDING OF SRTS

The concept of Safe Routes to School (SRTS) first started in Odense, Denmark in the late 1970s. It was designed as part of an initiative to reduce the number of children killed while walking and bicycling to school. Following its success, the program spread throughout Europe and in Australia, New Zealand, Canada, the United States and other countries around the world.

The first modern Safe Routes to School program in the U.S. began in 1997 in the Bronx, NY. In 1998, Congress funded two pilot SRTS programs through the US Department of Transportation. The National Highway Traffic Safety Administration (NHTSA) issued \$50,000 each for Safe Routes to School pilot programs in Marin County, California and Arlington, Massachusetts. Within a year after the launch of the pilot programs, many other grassroots Safe Routes to School efforts were started throughout the United States.

In 2003, the League of American Bicyclists organized the first meeting of leaders in pedestrian and bicycle advocacy to talk about SRTS issues and how a national program might work. At the same time, a number of states were developing their own SRTS programs, continuing to build momentum for the movement.

In 2005, U.S. Congress passed federal legislation to establish a National Safe Routes to School Program. The federal transportation bill, SAFETEA-LU (Safe, Accountable, Flexible, Efficient Transportation Equity Act: A Legacy for Users) was signed into law in August 2005 and dedicated a total of \$612 million towards SRTS from 2005 to 2009.³³

The Federal Highway Administration administers the federal Safe Routes to School program funds and provides guidance and regulations pertaining to SRTS programs. Federal SRTS funds are distributed to State Departments of Transportation (DOT) based on student enrollment; no state received less than \$1 million per year in 2005. The legislation also required each state to have a Safe Routes to School Coordinator to serve as a central point of contact for the state.

SAFE ROUTES TO SCHOOL TIMELINE 2009 1970s 1990s 1997 2005 2007 2012 SRTS program begins in SRTS Bronx, NY SRTS U.S. Congress All 50 states East Central July. http://www.saferoutesinfo.org/sites/default/files/task_force_report.web_.pdf . (1/9/15)

Safe Routes to School programs operate in all 50 states and D.C. Children benefiting from SRTS funds live in urban, rural and suburban communities representing varying income levels and a range of walking and bicycling conditions. With legislative extensions, the federal Safe Routes to School Program has apportioned nearly \$1.15 billion to states as of September 30, 2012. These funds have benefited or will benefit close to 15,000 schools.³⁵

The Wisconsin Department of Transportation distributed more than \$19 million in federal funds for SRTS projects, throughout the state, from 2005 to 2012. The Safe Routes to School Program in Wisconsin provides funding for planning, infrastructure and non-infrastructure projects within two miles of an elementary or middle school (kindergarten–8th grade).

In July 2012, Congress passed a transportation bill: Moving Ahead for Progress in the 21st Century Act (MAP-21). Starting in October 2012, Safe Routes to School (SRTS) activities were eligible to compete for funding alongside other programs, including the Transportation Enhancements program and Recreational Trails program, as part of a new program called Transportation Alternatives (TAP). The SRTS funding under the SAFETEA-LU legislation can continue to be awarded as long as funds remain.³⁶

As of the 2013 fiscal year, SRTS projects are eligible to compete for funding under TAP and therefore subject to all TAP requirements. This includes the match requirements; 80 percent federal funding with a 20 percent local match. The tables below display funding allocations at federal and state levels for the Safe Routes to School program, allocated through SAFETEA-LU from 2005-2012 and TAP starting in 2013.

EAST CENTRAL WISCONSIN REGIONAL SRTS PROGRAM

The East Central Wisconsin Regional Safe Routes to School (SRTS) Program, started in October of 2009, focuses on empowering local communities and school districts with the resources and knowledge needed to implement SRTS projects and activities. The Regional SRTS program is open to any public or private school (grades K-8) within the East Central Wisconsin Regional Planning Commission's ten-county region including Calumet, Fond du Lac, Green Lake, Marquette, Menominee, Outagamie, Shawano, Waupaca, Waushara and Winnebago Counties. As shown in Figure 11-2, in January 2015 there were 132 schools in 29 school districts participating in the Regional SRTS Program.

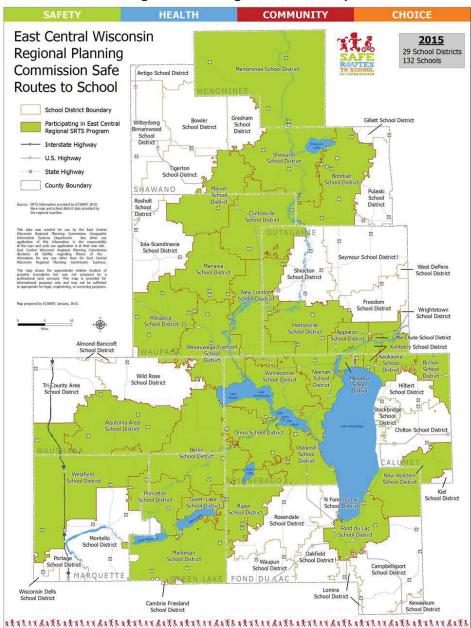

Figure 11-2: Regional SRTS Map

The Regional SRTS program is continually making strides to improve childhood health, reduce traffic congestion and pollution, and create more livable communities by making it safer and more appealing for students to walk and bike to school. The Regional SRTS program celebrated its five-year anniversary in 2014.

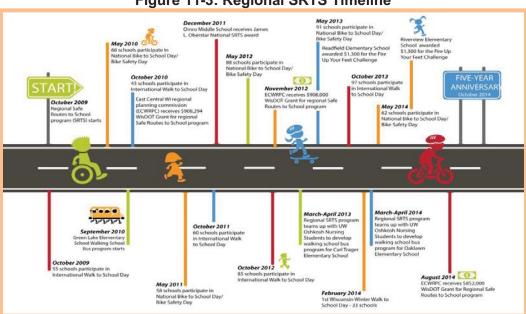

Figure 11-3: Regional SRTS Timeline

Source: ECWRPC SRTS Regional Database

Five-Year Highlights

The number of schools participating in the Regional SRTS Program increased significantly, there was also increased participation in SRTS events such as International Walk to School Day and Bike Safety Month/National Bike to School Day within the region. In December 2011, Omro Middle School received the James L. Oberstar National SRTS award. Readfield Elementary School (New London School District) won \$1,200 in the Fire Up Your Feet Activity Challenge in the fall of 2013. Riverside Elementary School (Fond du Lac School District) won \$1,300 in the Fire Up Your Feet Activity Challenge in the spring of 2014 and again in the fall of 2014.

Figure 11-4: Increased Participation in the Regional SRTS Program

East Central's Regional SRTS Partners

This list includes but is not limited to partners that have worked with the East Central Regional SRTS Program:

- East Central Wisconsin Regional SRTS Advisory Committee
- Safe Routes to School National Partnership
- National Center for Safe Routes to School
- Wisconsin Department of Transportation
- Wisconsin Department of Health Services
- Federal Highway Administration
- Wisconsin Bike Federation
- Alliance for Bicycling and Walking
- Local municipalities and county health, park and recreation, planning, law enforcement, public works and highway departments

- Local School Districts
- re:TH!NK Winnebago County Health Coalition
- UW Oshkosh
- Fox Cities Greenways, Inc.
- Well City Fond du Lac
- Well City Fox Cities
- Well City Oshkosh
- People for Bikes
- America Walks
- Weight of Fox Valley
- Activate Fox Cities
- Oshkosh Cycling Club

Regional SRTS Advisory Committee

The Regional SRTS program and its Advisory Committee are built on collaborative partnerships among many stakeholders including educators, parents, students, East Central's SRTS staff, elected officials, city planners and engineers, business and community members, bicycle and pedestrian advocates, and local health coalitions. The Advisory Committee provides guidance to East Central's SRTS staff and helps implement the SRTS Strategic Plan. Table 11-3 gives a complete list of committee members, as of February 2015.

Table 11-3: Regional SRTS Advisory Committee Members

COMMITTEE MEMBERS	ORGANIZATION
Marian Sheridan, Chair	Fond du Lac School District
Cheryl Laabs	Winnebago County Health Department
Joe Horvath	Omro Middle School
Lauree Renaud	Green Lake Greenways
Derek Weyer	WisDOT - Northeast Region
Matt Halada	WisDOT - Northeast Region
Brenna Root	Winnebago County Health Department
Emily Dieringer	re:TH!INK
Ann Marx	City of Brillion
Mary Feldt	Waupaca Area School District
Tanya Iveron	WisDOT - Madison
Mikki Duran	Appleton Area School District

In 2011, the Regional SRTS Advisory Committee developed the East Central Regional Safe Routes to School Strategic Plan. *The East Central Regional Safe Routes to School Strategic Plan* (2012-2016) was approved by the East Central Wisconsin Regional Planning Commission Board in January, 2012. Each year a Regional SRTS Action Plan is developed, reviewed and approved by both the Regional SRTS Advisory Committee and the East Central Wisconsin Regional Planning Commission Board.

Figure 11-5: Regional Safe Routes to School Strategic Plan (2012-2016)

Mission: Safe Routes to School engages and empowers schools and communities to improve the health and well-being of children and families by advocating safe walking and bicycling.

Vision: Through collaboration, Safe Routes to School is a catalyst that empowers communities and schools to become more walkable and bikeable, creating safe, healthy, active lifestyles.

Student Engagement	Policy, Planning, & Infrastructure Leadership	Robust Partnerships	Communication	Regional Sustainability & Evidence-based Practice
Engage and empower students on all levels to develop and implement walking, biking, and other active lifestyle initiatives.	Provide resources, leadership & expertise to foster diverse collaboration & a framework to build a healthy & active community.	We will create & strengthen both public and private partnerships, resulting in increased advocacy, sustainable funding, & corporate participation in SRTS.	Through frequent & consistent outreach, SRTS will offer accessible communications, increase awareness, educate stakeholders, & engage communities.	Regional SRTS will be the leader in establishing evidence-based criteria to support & sustain SRTS community cultures.
Develop and assist school districts with school-based Biking and Walking Clubs.	Establish written hazardous bussing policy/criteria.	Develop partnerships with businesses, non- profits, & business organizations for funding support.	Engage policy stakeholders with face to face meetings on key themes, targets, and objectives.	Develop a Performance Evaluation Analysis that shows benefits: health, economic, and environmental.
Organize the participation of parents, grandparents, and the community in Safe Routes to School Initiatives	Revise & create land use, neighborhood development, & street design bike friendly standards.	Encourage work-life practices (like flex hours) that allow for participation in SRTS activities.	Engage school districts in development of online consortiums and intranet links to share best practices.	Implementation of regional guidelines via annual safety assessments.
Youth engagement is enhanced through programming and membership in SRTS Committees.	Partner with non- profits and local businesses to increase infrastructure linkages to school.	Increase collaboration with healthcare partners on community events-bike helmet programs, etc.	Engage families & students at all levels with online gaming format.	Influence region-wide practices through policy/media advocacy.
Expand SRTS partnerships to summer and afterschool programs.	Develop Comprehensive approach to planning and funding.	Leverage relationships with local partners to increase programming.	Engage media through increased frequency, expansion to national media to promote regional brand.	Establish consistent messaging that demonstrates effectiveness of SRTS to policy makers.

Regional SRTS Program Funding

The East Central Wisconsin Regional SRTS Program is funded through grant awards, administered by the Wisconsin Department of Transportation (WisDOT). WisDOT aims to solicit SRTS project applications as part of the Transportation Alternatives Program (TAP) award cycle every other calendar year. The Regional SRTS program started receiving non-infrastructure grant awarded funding in 2009. Prior to 2009, East Central staff worked with local communities utilizing local funds to support SRTS projects. The table below shows the amount East Central Wisconsin Regional Planning Commission was awarded each grant cycle to use towards the Regional SRTS Program.

Table 11-4: East Central Wisconsin Regional SRTS Program Funding

TOTAL	\$2,852,194
2014 (TAP)	\$852,000
2013 (SRTS)	\$908,000
2010 (SRTS)	\$908,294
2009* (SRTS)	\$183,900*
WisDOT GRANT CYCLE	GRANT AWARD ALLOCATION

Source: ECWRPC SRTS Regional Database

Notes: * 2009 was the pilot year, that dollar amount only reflects one year.

Regional SRTS Programs and Events

East Central staff also work with local SRTS task forces to promote SRTS initiatives through programs and events such as International Walk to School Day, Winter Walk to School Month, Bike Safety Month, Frequent Walker Program, Fire Up Your Feet, Walking School Bus Program, and Youth Engagement Programs. See *Table 11-5* for schools participating in the Fond du Lac urbanized area.

International Walk to School Day (1st Wednesday in October)

International Walk to School Day is a global event that involves communities from more than 40 countries walking and bicycling to school on the same day. It began in 1997 as a one-day event. Over time, this event has become part of a movement for year-round safe routes to school programs. In 2013, there were 4,447 Walk to School Day events held nationally and 97 held across the East Central Wisconsin Region.

Winter Walk to School Day/Month (Month of February)

Winter Walk to School Day is an international event held in February to promote walking to school year-round. In Wisconsin it started as a one day event in February 2013. Due to potential weather related challenges and to accommodate as many schools as possible, the entire month of February has been designated by East Central Wisconsin Regional Planning Commission as

³⁸ http://www.dot.wisconsin.gov/localgov/docs/srts.pdf.

Winter Walk to School Month. In February 2015, there were over 30 schools participating in this event across the East Central Wisconsin Region.

Bike Safety Month

The East Central Regional SRTS Program observes Bike Safety Month annually in May in conjunction with National Bike Awareness Month, National Bike to School Day, and Bike to Work Week. The event focuses on increasing awareness and bicycle safety while encouraging students to bike to school. In past years, up to 91 public and private schools from across the East Central Region have participated in Bike Safety Month.

Frequent Walker Program/Mileage Club

Schools within the region develop frequent walker programs (i.e. Walking Wednesdays) to encourage families to walk to school more often. Students attending rural schools may not have opportunities to bike and walk to school. For that reason, several schools within the East Central Region have developed Frequent Walker Program on their campus where students can walk a designated route on school grounds. Many schools have developed mileage club programs in which frequent walker punch cards are provided so children can track their physical activity. As of 2015, there are approximately 30 schools with the East Central Wisconsin region participating in a frequent walker program.

Fire Up Your Feet Program

The Fire Up Your Feet Program offers free resources such as, an online Activity Challenge Tracker with monetary awards, a school fundraising organizer and more, all aimed at encouraging families, students, and schools to work together to create active lifestyles which inspire our children to be healthy and physically active. The Fire Up Your Feet Wisconsin Program was started by local SRTS coalitions in Milwaukee, La Crosse, Madison, and the East Central Region. Website: http://wi.fireupyourfeet.org.

Walking School Bus Program or Bicycle Train

A Walking School Bus (WSB) is a group of children who walk to school together under the supervision of trained adult leaders. The program promotes good health, a cleaner environment, and reduced traffic around schools. A variation on the walking school bus is the bicycle train, in which trained adults supervise children riding their bikes to school instead of walking. In the 2014 spring semester, there were 5 schools and approximately 77 students within the East Central region continually participating in a walking school bus program.

Youth Engagement

The purpose of the Youth Engagement Program is to engage middle school youth to develop SRTS activities for their peers. Refer to the East Central WI Youth Engagement Program Guidebook on the East Central WI Regional SRTS website: http://eastcentralsrts.org/regional-srts-programs/youth-engagement-program.

Local SRTS Programs

Student Surveys

Student surveys tally how students are currently traveling to and from school. Student surveys are conducted one week for 3 days (Tuesday, Wednesday, and Thursday). National Safe Routes to School Forms are used for student surveys. Student surveys are distributed in the fall and spring.

Parent Surveys

Parent surveys are used to find out parent's concerns with allowing their child(ren) to walk or bike to school and from school. These can be sent home in take home folders or in registration packets at the beginning of school, there is also a form available online. National Safe Routes to School Forms will be used for parent surveys. Parent surveys are distributed in the fall and spring.

Bike and Walk Audits

Task force members will go through a Bike/Walk Audit training where they look at various scenarios and discuss how they would solve them using the 5 E's. Bike/Walk Audits are observations and evaluations of existing walking/biking conditions at and around a school. East Central staff will assist the task force in conducting these audits and providing the task force with maps, a checklist and a comment sheet.

Local SRTS Task Force

A Local SRTS Task Force is made up of a variety of stakeholders including but not limited to local law enforcement, school representatives, government representatives, health professionals, department of transportation, parents, and students.

Local SRTS Action Plans

Local SRTS action plans include the following: student and parent surveys; bike and walk audits; and school specific recommendations. When addressing safety concerns and making recommendations, the Regional SRTS program is guided by the 5 E's framework; Education, Encouragement, Engineering, Enforcement, and Evaluation.

APPLETON (FOX CITIES) TMA SRTS PROGRAM

There are 12 school districts within the Appleton (Fox Cities) urbanized area; Appleton Area School District, Freedom Area School District, Hilbert School District, Hortonville Area School District, Kaukauna Area School District, Kimberly Area School District, Little Chute School District, Menasha Joint School District, Neenah Joint School District, Oshkosh School District, Winneconne Community School District and Wrightstown Community School District.

While Hilbert School District, Oshkosh School District, Winneconne Community School District and Wrightstown Community School District boundaries are located within the Appleton urbanized area, these school districts do not have schools located within the Appleton urbanized area. Freedom Area School District has one school within the Appleton urbanized area; however, Freedom Area School District is not participating in the Regional SRTS program at this time. The following 7 school districts within the Appleton (Fox Cities) urbanized area are participating in the Regional SRTS Program; Appleton Area School District, Hortonville Area School District, Kaukauna Area School District, Kimberly Area School District, Little Chute School District, Menasha Joint School District, and Neenah Joint School District.

Appleton Area School District

The City of Appleton applied for and received a SRTS Planning Grant from the WisDOT in 2007. The plan worked with three pilots schools within the Appleton Area School District: Richmond, Lincoln and Franklin Elementary Schools. In 2008, the City of Appleton received a SRTS Infrastructure and Non-Infrastructure Grant funding for sidewalk, crosswalk, and signage improvements along with hiring a part-time SRTS Coordinator. The local SRTS coalition helped to develop educational materials, provide incentives and develop local public service announcements. In 2009, the Town of Grand Chute adopted their Local SRTS Action Plan that is for Badger and Houdini Elementary Schools. That plan can be found on the East Central Regional SRTS program website at http://eastcentralsrts.org/local-programs/appleton-area-school-district. In 2010, the Town of Grand Chute applied for and received SRTS Infrastructure and Non-Infrastructure Grant funds to make infrastructure improvements near Badger Elementary School and provide educational opportunities for students at Badger Elementary School. Since the development of these two plans, several additional schools in the district have started participating in the Regional SRTS Program and school-specific Local SRTS Action Plans are being developed.

The following 13 schools in the Appleton Area School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

- Badger Elementary School
- Celebration Lutheran School
- Columbus Elementary School
- Edison Elementary School
- Fox River Academy
- Horizons Elementary School
- Houdini Elementary School

- Huntley Elementary School
- Jefferson Elementary School
- Johnston Elementary School
- Lincoln Elementary School
- Richmond Elementary School
- Stephen Foster Elementary Charter

The table below displays program and event participation for each of these schools during the 2013-2014 school year.

Table 11-5: School Participation in Regional Safe Routes to School Programs & Events

Notes: * Data Unavailable

Total Appleton Area School District student participation was 4,469 in 2013-3014.

Hortonville Area School District

The Hortonville Area School District has been actively participating in the East Central Regional SRTS program and meeting regularly since 2009. The Hortonville/Greenville SRTS Task Force is a collaborative group comprised of representatives from the Village of Hortonville, Town of Greenville, Hortonville Area School District, Immanuel Lutheran School, St. Mary's Catholic School, Outagamie County, and the Wisconsin Department of Transportation. Parent and Student Surveys were conducted at each school in the fall of 2009. Bike and Walk Audits were done in the spring of 2010.

The Hortonville/Greenville SRTS Task Force will continue to evaluate the SRTS Program through these measurement tools and make further improvements, as necessary. The school-specific Local SRTS Action Plans will continue to serve as guiding documents for current and future SRTS-related efforts. These plans can be found on the East Central Regional SRTS program website at http://eastcentralsrts.org/local-programs/hortonville-area-school-district.

The SRTS Task Force continues to educate and promote SRTS initiatives by re-evaluating each of the school campuses for safety issues, assessing parent attitudes, perceptions, and concerns with allowing their children to walk or bike to school, and by gathering law statistics on speeding, traffic violations, and volumes at and around schools.

The following four schools in the Hortonville Area School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

- Greenville Elementary School
- Greenville Middle School
- Immanuel Lutheran School
- Saint Mary's Grade School

The table below displays program and event participation for each of these schools during the 2013-2014 school year.

Source: Data from ECWRPC SRTS Regional Website 40 (2013-2014 school year)

Notes: * Data Unavailable

Total Hortonville Area School District student participation was 1,674 in 2013-3014.

Kaukauna Area School District

The Kaukauna Area School District began working with the East Central Regional SRTS program in 2014. At that time an initial meeting was held with stakeholders from the district and the City of Kaukauna to discuss implementation of a SRTS program in the community. In the fall of 2014 Bike/Walk Audits were conducted at each of the school sites to inventory existing conditions and record any safety concerns related to students walking or biking to school.

As implementation continues survey data will be collected from each of the schools and school-specific Local SRTS Action Plans will be developed for each school site. Schools within the district are also participating in education/encouragement programs which are part of the East Central Regional SRTS program to encourage more students to walk/bike to school and educate them on how to do so safely.

The following five schools in the Kaukauna Area School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

^{*} Winter Walk to School Month started in 2014

Notes: * Data Unavailable

Total Kaukauna Area School District student participation was 3,081 in 2013-3014.

Kimberly Area School District

The Kimberly Area School District began participating with East Central Wisconsin Regional Planning Commission to complete their Local SRTS Action Plan in 2008. That plan can be found on the East Central Regional SRTS program website at http://eastcentralsrts.org/local-programs/kimberly-area-school-district. During the planning process, the local SRTS coalition recommended that an underpass be developed on County Highway CE near the Heart of the Valley YMCA. The Village of Kimberly was awarded the Transportation Enhancement Grant by the Wisconsin Department of Transportation. The Noe Road Trail in the Village of Harrison was also identified in the Kimberly SRTS Plan as a way for students living in the adjacent subdivision to safely walk to and from school. This project was funded through American Recover and Reinvestment Act of 2009. Today it provides students and residents opportunities to walk to and from school and also to the Darboy Community Park.

The following eight schools in the Kimberly Area School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

- Holy Spirit Catholic School
- Janssen Elementary School
- Sunrise Elementary School
- Westside Elementary School

⁴¹ http://eastcentralsrts.org/wp-content/uploads/2013/12/FondduLacSchoolDistrict.pdf. (2/10/15)

Notes: X indicates participation

Total Kimberly Area School District student participation was 3,482 in 2013-3014.

Little Chute School District

The Little Chute School District began participating with East Central Wisconsin Regional Planning Commission to complete their Local SRTS Action Plan in 2008. That plan can be found on the East Central Regional SRTS program website at http://eastcentralsrts.org/local-programs/little-chute-area-school-district. Little Chute School District is the only school district in the region that does not provide busing, except for special needs students.

All students that attend Little Chute Elementary and Middle Schools live within two miles of the schools. Since 2008 the Village of Little Chute adopted a bicycle and pedestrian plan and is working to increase their bicycle and pedestrian accommodations throughout the village.

The following two schools in the Little Chute School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

- Little Chute Elementary School
- Little Chute Middle School

The table below displays program and event participation for each of these schools during the 2013-2014 school year.

Notes: * Data Unavailable

Total Little Chute School District student participation was 984 in 2013-3014.

Menasha Joint School District

The Menasha Joint School District started working with the East Central Regional SRTS Program in 2010 to develop their local SRTS program. A Task Force was formed and met regularly over the course of 4 months to discuss programming and Bike/Walk Audits were performed at all of the schools. After the audits the Task Force met to discuss the results and began developing recommendations for each school site. In the months following that meeting there was a large of amount of turnover in the administration within the district and the program lost momentum and was unable to continue developing their local SRTS program.

In August 2013 administration from the district reached out to the East Central Regional SRTS program and since then the district has been working hard to re-vamp their SRTS efforts. All of the schools have been reevaluated with Bike/Walk Audits, all of the schools are collecting student and parent survey data, and a new Task Force is being formed and plans to meet in 2014. The district plans to work with the East Central Regional SRTS Program to develop Local SRTS Action Plans for all of the K-8 schools in the district in the near future and is working hard to promote walking/biking to school safely.

The following six schools in the Menasha Joint School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

Butte des Morts Elementary School

Total Menasha School District student participation was 2,228 in 2013-3014.

Neenah Joint School District

The Neenah Joint School District is committed to empowering students to maintain a healthy and active lifestyle. Encouraging students to walk or bike to school and educating them on how to do so safely is a big part of this commitment. The Neenah SRTS Task Force formed in 2011 as the Neenah Joint School District became actively involved in the East Central Regional SRTS program. The Task Force is made up of individuals from the Neenah School District, City of Neenah, City of Neenah Police Department, Neenah Health Department, and the Town of Neenah. Since 2011 many schools in the district have been actively participating in events and programs that are a part of the East Central Regional SRTS program. Most of the schools have already completed all of the necessary steps and have a draft version of their Local SRTS Action Plan completed which can be found on the East Central Regional SRTS program website at http://eastcentralsrts.org/local-programs/neenah-joint-school-district.

The Neenah community continues to promote walking and biking initiatives through bicycle safety assemblies, Summer Fun Runs and "Girls on the Run" Program (a nationally recognized running and empowerment program for school aged girls. The City of Neenah Police Department and Parks and Recreation Department also provide bicycle registration, a crossing guard program, and annual bike safety rodeos for residents.

The following 13 schools in the Neenah Joint School District, located within the Appleton urbanized area, are participating in the Regional SRTS Program:

- Alliance Charter School
- Clayton Elementary School
- Coolidge Elementary School
- Hoover Elementary School
- Horace Mann Middle School
- Lakeview Elementary School
- Roosevelt Elementary School

- Saint Margaret Mary's Grade School
- Shattuck Middle School

Total Neenah School District student participation was 4,726 in 2013-3014.

Total MPO enrollment participating in Regional SRTS program was 20,644 in 2013-3014 school year.

12-1

CHAPTER 12: SECURITY

INTRODUCTION

The need for ensuring the operation and integrity of America's surface transportation system is evident following such events as September 11, 2001, Hurricane Katrina, Superstorm Sandy and other similar emergency incidents. A resilient and efficient transportation system is critical to ensuring safe, continuous movement of people and goods during a natural or human catastrophe. Major corridors within the three county region consist of U.S. Highways 10, 41, 45, and 151 and State Highways 15, 21, 26, 44, 47, 55, 76, 110, 114, 116 and 441. U.S. Highways 41, 45 and State Highway 55 provide north/south movement between Milwaukee and Green Bay. East/west movement across the three county region is inhibited by Lake Winnebago, but is intact within each county. State Highways 114 and 151 provide east/west routes in Calumet County; U.S. Highway 10 and State Highway 441 provide an east/west route through the three county region; U.S. Highway 45 provides north/south movement within and through Winnebago County. The full capability of the transportation system must be harnessed and optimized to effectively move people and goods during a natural or human catastrophe.

TRANSPORTATION SECURITY

MAP-21 emphasizes the need to improve transportation security to strengthen America's highways. The Appleton (Fox Cities) TMA recognizes the importance of security within the planning area and will consult with local municipalities to insure transportation system security.

All states are required to develop hazardous mitigation plans under the planning requirements found in the Code of Federal Regulations (CFR), specifically 44 CFR Parts 201.4 and 201.5. Local communities are required to do the same under CRF Part 201.6. Wisconsin Emergency Management (WEM) is that state agency in charge of updating the statewide plan which follows a three year cycle. The latest version of Wisconsin's hazard mitigation plan is current as of 2011.

Calumet, Outagamie and Winnebago Counties all have active hazard mitigation plans.^{2,3,4,5} Each Wisconsin county is designated as an emergency planning district and has a Local Emergency Planning Committee (LEPC) to administer the local program. LEPC membership includes local elected officials, members of emergency response agencies (fire, law enforcement, EMS, health, etc.), and representatives for transportation, public works, the media, community groups, environmental groups, and operators of affected facilities.⁶

http://www.fhwa.dot.gov/map21/summaryinfo.cfm. (4/30/14)

² http://emergencymanagement.wi.gov/mitigation/maps/Local_Hazard_Mitigation_Plan_Map.asp. (5/1/14)

http://www.outagamie.org/modules/showdocument.aspx?documentid=13553. (5/1/14)

⁴ http://www.co.calumet.wi.us/DocumentCenter/View/1183. (5/1/14)

⁵ http://www.co.winnebago.wi.us/sites/default/files/EmergencyManagement/Winnebago_County_HMP_draft_3.pdfm. (5/1/14)

⁶ http://emergencymanagement.wi.gov/EPCRA/docs/epcra_lepc_info.pdf. (4/30/14)

The following goals were taken from the State of Wisconsin's hazard mitigation plan which serve as the foundation for the updated State Mitigation Strategy and are supported by the Appleton (Fox Cities) TMA:

- 1. Minimize human, economic and environmental disruption and reduce the potential for injury and loss of life from natural hazards.
- 2. Enhance public education about disaster preparedness and resilience, and expand public awareness of natural hazards.
- 3. Encourage and promote continued comprehensive hazard mitigation planning and implementation of the plan.
- 4. Support coordination and collaboration among federal, state, and local authorities, and non-governmental organizations regarding hazard mitigation activities.
- 5. Improve the disaster resistance of buildings, structures, and infrastructure whether new construction, expansion or renovation.⁷

A security incident can affect any number of people at any time and any place. Being prepared to handle catastrophic events requires coordination and planning. The Appleton (Fox Cities) TMA recommends the development of an evacuation plan, an alternative route(s) plan, and an Intelligent Transportation System (ITS) Plan at a regional level to help ensure preparedness. The Calumet, Outagamie and Winnebago County hazard mitigation plans should be consulted and coordinated throughout the process.

At the statewide level, WisDOT's Statewide Traffic Operations Center (STOC) provides additional guidance to assist in any type of roadway emergency and/or evacuation. STOC recommends that local municipalities notify them for any type of roadway emergency and/or evacuation. WisDOT has a comprehensive Emergency Transportation Operations (ETO) plan and the STOC is able to activate the appropriate response to an emergency 24/7. The STOC may also assist local municipalities with the following for traffic control and traveler information⁸:

- Updating messages on overhead Dynamic Message Signs (DMS) and on state-owned Portable Changeable Message Signs (PCMS).
- Posting evacuation information on the 511 website, phone system and Twitter accounts.
 The STOC has the ability to post floodgate messages on 511 so that all individuals are
 notified of the emergency situation immediately upon calling in to the phone system or
 accessing 511 via the website. 511 is an efficient and effective method for providing
 traveler information.
- Sending e-mail notifications. E-mail distribution lists have been developed for the media, trucking companies and neighboring state's DOTs.
- Monitoring cameras and detectors. This information can be provided to first responders that have access to the cameras. This information can also be found on the online LINK system through the UW-Madison TOPS lab.

Throughout the event the STOC must be given status updates to ensure accurate information is being provided to motorists, the media, and others.

INTELLIGENT TRANSPORTATION SYSTEM (ITS)

The US Department of Transportation defines an Intelligent Transportation System (ITS) as a means to "improve transportation safety and mobility and enhance American productivity through the integration of advanced communications technologies into the transportation infrastructure and in vehicles. Intelligent transportation systems (ITS) encompass a broad range of wireless and wire line communications-based information and electronics technologies"9. Please see Appendix items F and G which shows a map of recent ITS improvements within Outagamie and Winnebago Counties, respectively. Examples of ITS deployments include:

- ramp exit number signage;
- closed circuit TV cameras;
- closed circuit TV camera trailers:
- ramp closure gates;
- type III barricades:
- dynamic message signs;
- portable changeable message signs:
- traffic detection sensors; and
- crash investigation sites.

Benefits of ITS¹⁰:

- Safety reduced crashes and crash severities (Examples: collision avoidance, dynamic message signs, speed and right of way warnings, speed enforcement, road weather information and management, traffic signal enforcement, work zone management and variable speed limits¹¹)
- Mobility reduced delay and improved travel reliability (Examples: dynamic message signs, advanced signal systems, adaptive signal controls, transit signal priority, pre-trip information, surveillance, work zone management and automatic vehicle location/computer-aided dispatch¹²)
- **Productivity –** reduced operating costs for both public and private entities (Examples: automatic vehicle location/computer-aided dispatch, commercial vehicle operations electronic screening, road weather information and management, winter maintenance strategies, commercial vehicle operations credential administration, service patrols, dynamic message signs and freight and asset tracking¹³)
- Efficiency improved use of existing infrastructure capacity and costly right-of-way
- **Energy and Environment –** reduced emissions and fuel consumption (Examples: advanced signal systems, dynamic message signs, service patrols, roadway

surveillance, pre-trip information, speed control, congestion pricing and electronic toll collection¹⁴)

 Customer Satisfaction – improved information, smarter use of resources, and smoother travel

ITS emerging issues to consider (from ITS e-Module 14)¹⁵:

- Has the market penetration of smart devices peaked, or are substantial new waves of devices and sensors coming to the marketplace?
- Will travelers be concerned and circumspect about their privacy or will they freely share
 with third parties information about their whereabouts, travel behaviors, and preferences
 in wirelessly connected, location-based, socially networked community environments?
- Is the rapid advent of big data and extreme computing at tera-, peta-, and exobyte scales—the result of collecting enormous amounts of data from connected infrastructure, vehicles, and travelers—going to be manageable by existing and projected capacities of computers, data centers, and servers?
- What will happen as the demographics of the traveling public change over time? Young
 people are socially networked and tech-savvy, whereas an aging population will demand
 greater mobility options than currently exist. How will the market meet these changing
 demands?
- Will cyberspace hackers find ways to breach security safeguards and cause traffic mayhem?
- Will the views of vehicles and vehicle ownership by generation "Y" be different from those of previous generations, resulting in shifts in demographics, automobile ownership, trip generation, and parking space requirements?
- Amongst a host of other issues that will need to be considered and dealt with.

TRANSIT SECURITY

Valley Transit buses and transit center are equipped with surveillance systems that digitally record activity.

The Federal Transit Administration (FTA) encourages all transit systems to develop and implement proactive security plans to protect passengers, employees, revenues and property. They have made a wealth of information available to assist in the development of written security plans.

Additionally, the FTA has developed a *Response and Recovery for Declared Emergencies and Disasters Plan* which can be used as a resource for local transit agencies. This resource documents addresses both transit agencies affected by declared emergencies and disasters as well as transit agencies contributing to response and recovery from declared emergencies and disasters.^{16,17}

http://www.pcb.its.dot.gov/eprimer/module14.aspx. (09/11/14)

¹⁴ Ibid. (9/18/14)

http://www.fta.dot.gov/documents/FTA_Response_Recovery_Declared_Emergencies_Disasters.pdf. (5/1/14)

http://www.fta.dot.gov/documents/ProtectiveMeasures.pdf. (5/1/14)

The FTA and the National Transit Institute (NTI) note the following suggestions for transit operators and transit agencies to be better equipped to handle an emergency situation (from their Emergency Preparedness Guide)¹⁸:

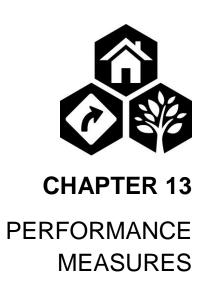

What to Do Before an Emergency Happens

- Understand your agency's emergency policies, protocols, and communication plan.
 Know how to operate emergency equipment as well as emergency and alternative
 communication devices in case main lines of communication are severed. Consider
 communication methods for those with visual, hearing, speech, or other impairments.
 For example, having paper and markers on hand can allow a vehicle operator to
 communicate with hearing-impaired customers.
- Stock and maintain an agency-supplied first-aid kit and any other emergency supplies for your customers.
- Have the following readily accessible for use in an emergency situation:
 - Checklist of procedures for notification.
 - Current emergency contact information. Make yourself a small, wallet- sized index card of vital contact numbers.
 - City, town, county and state highway maps.
- Keep a personal emergency supplies kit close to your work station, if permitted by your agency. Additionally, a fully charged cell phone and a battery-operated radio are key items to have on hand. Know which radio stations will provide emergency information for your area.

• Transit operators and drivers:

- Bus and van drivers should learn alternate routes in the event your main route is impassable or obstructed.
- Rail operators should be aware of your company's policies with regard to turning off traction power and emergency uncoupling of rail cars.

CHAPTER 13: PERFORMANCE MEASURES

INTRODUCTION

As noted previously within this document, performance measures are a requirement as per MAP-21 regulations. Performance measures have been established and documented in previous chapters of this planning document. The purpose of this chapter is to develop a full inventory of the performance measures and to document if:

- the performance measure has been met;
- the performance measure is trending in a positive direction;
- the performance measure is trending in a negative direction; or
- the performance measure is staying about the same.

For a more detailed analysis and information, please use the Comments Column to see which chapter each performance measure can be found within the long range plan. **Table 13-1** displays a summary of performance measures for the planning area.

CONGESTION MANAGEMENT PROCESS (CMP) PLAN

Urbanized Areas exceeding 200,000 in population (or Transportation Management Areas) are required to develop congestion management strategies as part of the long-range transportation planning process. Transportation Management Areas (TMAs) are federally required to produce a Congestion Management Process (CMP) plan which essentially identifies and monitors congestion within a TMA. MPO staff recommends implementing CMP principles and ideas and incorporated these elements into this LRTP (see below). MPO staff reviewed similar CMP documents from across the nation to develop the congestion management strategies for the Appleton (Fox Cities) TMA.

Definition

A CMP as defined in federal regulation is intended to serve as a systematic process that provides for safe and effective management of local transportation networks. Reduced congestion is achieved by first evaluating the entire transportation system. Once there is a complete understanding of how all the moving parts works together, then improvements to the system can take place to increase overall efficiencies. Examples of congestion improvements include: street network strategies, Travel Demand Model (TDM) strategies, railroad and bridge strategies, transportation alternative strategies, freight strategies, transit strategies, non-recurring incident strategies, district strategies, Intelligent Transportation System (ITS) strategies and policy level strategies. Transportation efficiency is tracked through a number of performance measures and performance targets set by the State of Wisconsin and the Federal Highway Administration (FHWA).

The CMP was first instated by the Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA), which was known as a Congestion Management System (CMS). The CMS required the development of a plan with a focus on system level planning. The CMS planning requirement remained with the implementation of Intermodal Surface Transportation Efficiency Act for the 21st Century (ISTEA-21) until the introduction of the Safe, Accountable, Flexible, and

Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) in 2005. SAFETEA-LU changed the CMS to a CMP requirement, which changed the focus from system level planning to dealing with congestion as a broader process. The Moving Ahead for Progress in the 21st Century Act (MAP-21) reauthorized the CMP requirement with a focus on performance-based planning. Performance-based planning includes the establishment of a performance-based approach to transportation decision making and the establishment of performance targets to meet national and state goals.¹

The primary objectives of the CMP include:

- development of congestion management objectives;
- establishment of measures of multimodal transportation system performance;
- collection of data and system performance monitoring to define the extent and duration of congestion and determine the causes of congestion;
- identification of congestion management strategies;
- implementation activities, including identification of an implementation schedule and possible funding sources for each strategy; and
- evaluation of the effectiveness of implemented strategies.²

What Is Congestion?

Congestion in reference to transportation relates to an excess of vehicles on a portion of roadway at a particular time resulting in speeds that are slower—sometimes much slower—than normal or "free flow" speeds. Congestion often means stopped or stop-and-go traffic. – FHWA - Traffic Congestion and Reliability: Trends and Advanced Strategies for Congestion Mitigation

What Is Performance-Based Planning?

Performance-based planning applies measureable management principles to transportation system policies and investment decisions, providing a link between management and long range decisions about policies and investments that an agency makes in its transportation system while establishing a level of transparency and objectivity that is critical for development of transportation plans. – *FHWA* - *The Performance Based Planning and Programming Newsletter Volume 1, Issue 1, January 2013.*

Strategies for Performance Measurements and Targets

Performance measures allow the MPO to adequately gauge the system performance in order to identify congestion related problems and communicate this information to the public and effectively engage residents of an MPO. Performance measures use statistical evidence to determine current congestion conditions and assist an MPO in advancing their identified vision, goals and objectives. It is important to note that performance measures can adapt or change over time to better reflect the needs of the MPO.

According to federal regulation, the CMP must include "appropriate performance measures to assess the extent of congestion and support the evaluation of the effectiveness of congestion

¹ http://www.fhwa.dot.gov/map21/mp.cfm. (1/30/2013)

² Congestion Management Process: A Guidebook, U.S. Department of Transportation Federal Highway Administration and Federal Transit Administration. (April 2011)

reduction and mobility enhancement strategies for the movement of people and goods. Since levels of acceptable system performance may vary among local communities, performance measures should be tailored to the specific needs of the area and established cooperatively by the State(s), affected MPO(s), and local officials in consultation with the operators of major modes of transportation in the coverage area." Performance measures should be created for assessing and monitoring both local level (individual projects) and regional (system wide) transportation networks.

State Performance Measures

The Wisconsin Department of Transportation (WisDOT) created a performance improvement program centered on the five core goals of: Mobility, Accountability, Preservation, Safety and Service (MAPSS). The MAPSS Performance Improvement Program guides the DOT in achieving their mission "to provide leadership in the development and operation of a safe and efficient transportation system." Establishing goals and measuring results is essential to running a successful and efficient organization as well as meeting public expectations. WisDOT publishes a quarterly report of progress published in February, May, August, and November. The performance measures used help the DOT assess the consistency of the MAPSS Program with their organization's goals, objectives, and vision. A scorecard was developed to provide a snapshot of the State of Wisconsin's transportation system. WisDOT's performance measures and targets were consulted in the development of the LRTP plan for the MPO.

Congestion Management Strategies

Congestion management strategies are designed to reduce vehicular traffic congestion through the promotion of alternative modes of transportation. Strategies can range from education and creation of policy to the design and development of physical infrastructure improvements. Federal regulation states that a CMP must include: "Identification and evaluation of the anticipated performance and expected benefits of appropriate congestion management strategies that will contribute to the more effective use and improved safety of existing and future transportation systems based on the established performance measures. The following categories of strategies, or combinations of strategies, are some examples of what should be appropriately considered for each [region]:

- (i) Demand management measures, including growth management and congestion pricing;
- (ii) Traffic operational improvements;
- (iii) Public transportation improvements;
- (iv) ITS [Intelligent Transportation Systems] technologies as related to the regional ITS architecture; and
- (v) Where necessary, additional system capacity."4

A primary objective is to reduce overall congestion to create an efficient, livable, safe, sustainable, and accessible transportation system that increases economic vitality and quality of life for all residents. Strategies can range from low costs for policy and education reforms to high costs for facility expansion and physical changes to the transportation system. The

³ US Department of Transportation Federal Highway Administration Congestion Management Process: A Guidebook (23 CFR 450.320 (c) 2). (July 2013)

⁴ US Department of Transportation Federal Highway Administration Congestion Management Process: A Guidebook (23 CFR 450.320 (c) 4). (July 2013)

following explains several congestion management strategies. Each strategy is defined and developed to show how it will reduce congestion and improve the overall transportation system.

Street Network Strategies

Encouragement and Education

- Rideshare Is the sharing of vehicle trips so that more than one person travels together, often to a common destination. The goal of rideshare is to have more than one person share a vehicle which will reduce travel cost, stress on the environment, reduce pollution (carbon emissions), parking spaces and for the purpose of this plan, congestion. Wisconsin runs a rideshare program found at the following link: http://www.dot.wisconsin.gov/travel/commuter/index.htm, where participants can register online and search for matches to share a ride. The rideshare program has an interactive mapping feature that accurately matches participants via their origins and destinations.
- Education of Bicycle and Pedestrian Opportunities Find opportunities to work with public and private entities to educate the general public on the proper usage of bicycle and pedestrian facilities. Promote bicycle facilities at the local and regional level to encourage residents to utilize bicycle and pedestrian facilities as a mode of transportation to and from work and for short trips (i.e. grocery store).
- Safe Routes to School Programs Collaborate with local SRTS programs to promote and encourage walking or biking to school. In 2009, American families drove 30 billion miles and made 6.5 billion vehicle trips to take their children to and from schools, representing 10-14 percent of traffic on the road during the morning commute. While distance to school is the most commonly reported barrier to walking and bicycling, private vehicles still account from half of school trips between ¼ and ½ miles a distance easily covered on foot or bike.
- Walking School Bus Program The walking school bus program is a group of 5-10 children who walk to school with adult supervision. It is part of the SRTS Program. The walking school bus concept was developed to enable children to walk to school safely even when traffic and crime is a concern.⁸

Parking Management

 Downtown Parking Program – To create a program that utilizes pricing to influence demand for parking or to discourage parking. For example the City of Appleton established a "Park and Ride" program for Oktoberfest. The City of Appleton sets up temporary park and ride locations outside of the Oktoberfest grounds where participants can park their vehicles and ride a bus for a reduced fare (\$0.25) and have direct transportation to the festivities.

⁵ http://www.dot.wisconsin.gov/travel/commuter/contacts.htm . (July 2013)

⁶ http://www.saferoutespartnership.org/resourcecenter/quick-facts. (July 2013)

lbid. (July 2013)

⁸ http://www.pednet.org/programs/walking-school-bus.html. (July 2013)

- Park and Ride Lots Promote Park and Ride Lots. Lots can be found at http://www.dot.wisconsin.gov/travel/parkride/. Parking is free and many have overnight parking in designated spaces, secure bike racks, shelters, and lighting. Many of these park and ride lots are also served by public transit.
- On-Street Parking Restrictions There are several on-street parking restrictions that
 can assist with traffic congestion including: alternate side of the street parking (oddeven), time restrictions on parking duration, ride share parking, peak period restriction
 (indicates a time period and location where parking is not allowed, typically during the
 commute hours, such as 7 a.m. 9 a.m. and 4 p.m. 6 p.m.) and short term parking/time
 restrictions. Routine enforcement can also improve traffic flow.
- Location-Specific Parking Ordinances Parking can be limited at specific locations
 that have other amenities that may reduce the need for on-site parking such as transit,
 and pedestrian oriented development.

Capacity Improvements

- Improvements include adding more lanes, eliminating at-grade intersections, and constructing new roadways. Expansion should only be considered if there are no other viable options.
- Maximize total width of roadways. Take advantage of excess width of roadways with additional lanes (lanes reserved for carpool lanes, mass transit, and bicycle lanes).

Access Management

- Minimize driveways and other entry points.
- Implement frontage roads; use frontage roads to direct local traffic to major intersections.
- Build shared driveways where feasible and practical.
- Left Turn Restrictions; Curb Cut and Driveway Restrictions Turning vehicles can impede traffic flow.
- Convert traditional intersections to roundabouts where feasible and practical.
- Reduce the number of conflict points between motorized and non-motorized transit and pedestrians.

Preservation

- **PASER** Help local municipalities collect road data and rate their roads using PASER; Provide asset management guidance when needed.
- PCI (Pavement Condition Index) Compile and inform state officials of their PCI conditions of state owned roadways.

Travel Demand Model Strategies

Travel Demand Models (TDM) are frequently updated to best represent "on-the-ground" conditions using computer models. Several data variables/sources are used to accurately calibrate a TDM. The list below represents typical data used in a model calibration:

- Alternative Work Hours Incorporate alternative work hour trips into the model to account for workers that arrive and leave work outside of the traditional commute period.
- Telecommuting Incorporate workers that telecommute to work. This involves employees working at home or at a regional telecommuting center.
- **Ridesharing** This is arranged or encouraged through employers and typically state DOTs (i.e. WisDOT).
- Model Calibration Incorporate "actual timed routes" to calibrate the model.
- Bicycle and Pedestrian Facilities Incorporate a bicycle and pedestrian component to the travel demand model.

Railroad and Bridge Strategies

Railroad crossings and bridges provide the necessary access points to connect the transportation network over such impediments such as railroad tracks, waterways, roadways, and other manmade and natural features. Accidents, construction or maintenance at either a railroad or bridge crossing can cause substantial temporary delays in traffic. The following are examples of strategies of how to mitigate congestion at these access points:

Railroad

- Rail crossing closings Work with railroad companies and local municipalities to identify rail crossings for closure.
- **Emergency management** Work with local municipalities and the railroad companies to ensure there are adequate options in place for rerouting traffic if an accident occurs at a railroad crossing.

Bridges

- **Sufficiency Ratings** Work with state and local municipalities to confirm bridges are being inspected on a regular basis. Those bridges that receive a "rehabilitation" or a "replace" rating are documented and appropriately addressed going forward.
- **Emergency management –** Work with local municipalities to guarantee there are adequate options for rerouting traffic if an accident occurs at a bridge.

Transportation Alternative Strategies

Transportation Alternative Strategies provide the public with viable options to vehicular transportation. These strategies not only provide transportation alternatives to those individuals who do not own a vehicle, but they also provide individuals with opportunities to incorporate regular exercise through bicycling and walking. With the rapid increase in obesity rates across the nation, transportation alternatives are one way to slow this epidemic. Listed below are examples of effective transportation alternative programs:

Safe Routes to School Program

- Support and encourage existing schools and districts currently participating in the SRTS program.
- Engage and recruit schools and districts that are not participating in the SRTS program.
- Engage other entities within the community that influence children activities like the health department and the local YMCA as another avenue to implement the SRTS program.
- Encourage the implementation of activities such as the "walking school bus" to reduce vehicular travel trips to and from school.

Bicycle/Pedestrian Safety Education Programs

• To work with the Bicycle Federation of Wisconsin on the implementation activities of the Share and Be Aware Program.

Bicycle Facility Improvements

- Secure Bike Racks (secure in terms of physically creating locations where bike racks are anchored in the ground; and in terms of having secure places where people feel safe with parking their bikes at a bike rack location).
- Add new sidewalks and designated bicycle lanes.
- Improved bicycle and pedestrian facilities at transit stops (bicycle racks and bike lockers).
- Support Pedestrian-Oriented Development (building setback restrictions and streetscape enhancements).
- Develop a continuous bicycle and pedestrian network that could include a combination of bike lanes, sharrows, multi-use trails and sidewalks.
- Improved Safety (maintaining lighting, signage, striping, traffic control devices, and pavement quality, and installing curb cuts, curb extensions, median refuges, and raised crosswalks).

 Exclusive Bicycle and Pedestrian Rights-of-Way (abandoned rail lines and other available properties that can be used for bike and walking trails).

Intersection Pedestrian Enhancements

- Marked Crosswalks/Pavements Any portion of a roadway at an intersection or elsewhere distinctly indicated as a pedestrian crossing by pavement marking lines on the surface.
- Accessible Pedestrian Signals An accessible pedestrian signal (APS) is a traffic signal that provides auditory and/or vibrotactile information to pedestrian who are blind or have weak vision.
- **Bike lanes** A portion of roadway that has been designated for partial or full use by bicyclists by pavement markings and signs.
- **Bump-out** Extending sidewalk or curb lines that reduce curb-to-curb effective roadway lane widths.
- **Complete Streets** Roadways designed and operated to enable a safe, attractive, and comfortable access for all users, including pedestrians (sidewalks, crosswalks), bicyclists (bike lanes), motorists, and public transport users of all ages and abilities.
- Diverters Barriers placed diagonally across an intersection, blocking certain movements.
- In-Road State Law Stop or Yield for Pedestrians Self-standing yield or stop sign
 placed in center of roadway to inform motorists that failure to yield or stop, while a
 pedestrian is in a crosswalk, results in breaking a state statute.
- **Paved Shoulders** Paved shoulders along higher traffic roads to create space for bicyclists to ride; increases safety for bicyclists and motorists by separating these modes of transportation.
- **Pedestrian Countdown Timers** Amount of time remaining in which pedestrians have to cross at intersections, before cross traffic begins.
- **Pedestrian Refuge Islands** Raised median with curb ramps to harbor pedestrians crossing between two opposing directions of traffic. Often curb ramps are equipped with yellow tactile warnings, which allow blind people to take notice of the refuge island.
- **Sharrow** Bicycle and double arrow are stenciled in an entire lane, designating the use for cyclists.

Rideshare's Bike Buddy Program

 Promote the use of WisDOT's Bike Buddy Program. Website is located at http://www.dot.wisconsin.gov/travel/commuter/bikebuddy.htm.

Freight Strategies

It is important to limit traffic congestion as much as possible to allow for the efficient movement of goods throughout the region. Freight movement is primarily conducted through truck or by rail. Goals for freight strategies include:

- Work with the freight community to identify freight related congestion issues to better meet their needs.
- Coordinate freight efforts with the Rail and Bridge Strategies previously mentioned in this chapter.
- Future/Long-term freight strategies:
 - Identify congested highway interchanges and work with transportation officials to design ramps to accommodate increased freight volumes and identify safety concerns for merging truck traffic onto and off of these interchanges.
 - Strategies to mitigate interchange safety/merging issues: increase networking opportunities with the freight community/members to understand their concerns, work with the freight community to pinpoint problem interchanges, and increase regular dialogue between the freight community, transportation officials and WisDOT to improve upon the existing transportation system.

Transit Strategies

Public transit not only reduces vehicular traffic, but provides an important service in the broader transportation system. Transit impacts the lives of every citizen in varying degrees; especially the elderly, youth, children at risk, low-income and auto-less residents. Transit ridership is an important instrument in reducing overall congestion. Transit Strategies include implementation of the following:

Service

- Increase bus route coverage and frequencies to meet the demands of riders.
- Implement transit stops at area Park-and-Ride lots to reduce auto traffic in the city centers.
- Reduce transit fares where possible.
- Make transit more convenient and attractive to increase ridership.

Education

- Encourage/increase use of public transit services.
- Integrate educational/promotional campaigns to inform residents of the benefits (economic, environmental, etc.) of utilizing transit services.

Non-Recurring Incident Strategies

Non-recurring incidents in regards to congestion management refer to one time or occasional events which have the potential to cause traffic delays. Non-recurring incidents include such delays that are experienced by seasonal weather patterns, civic/sporting/recreational events, or construction and accident traffic delays. These types of incidents are difficult to mitigate because of their sporadic occurrences. An effective way to counter non-recurring incidents is to create a well-balanced transportation system that can adapt to changing situations. Non-recurring incident strategies include:

Intersection Improvements

- Build over/underpasses to increase user safety and decrease congestion conflicts.
- Add turn lanes with adequate space.
- Install safe, highly visible crosswalks.

Geometric Design Improvements

- Widen street widths (where applicable) or incorporate a "road diet" to accommodate for bicyclists/pedestrians.
- Add turn lanes at intersections.
- Improve transportation system users' sight lines.
- Install auxiliary lanes to improve merging and diverging of traffic at busy locations.

District Strategies

Land use plays a critical role in generating traffic demands and it should work with and support the transportation system. Identifying effective land use strategies will help the transportation system become more efficient as well as alleviate congestion. The following are a list of district strategies:

- Increase urban density of buildings and population.
- Encourage polices that support growth management.
- Support "livable" communities/values.
- Promote in-fill development This strategy takes advantage of infrastructure that already exists, rather than building new infrastructure on the fringes of an urban area.
- Endorse sustainable design/practices.
- Encourage Transit-Oriented Development (TOD) This strategy clusters housing units and/or businesses near transit stations in walkable communities.

• Promote Mixed-Use Development – This strategy allows trips to be made without automobiles. People can walk to restaurants and services rather than use automobiles.

Intelligent Transportation System (ITS) Strategies

An Intelligent Transportation System (ITS) is designed to collect traffic data and communicate traffic conditions to drivers in real-time so they can make informed transportation decisions. The technology is designed to create a more effective and efficient transportation system. Strategies for ITS include:

- Traffic Signal Coordination and Timing This strategy improves traffic flow and reduces emissions by minimizing stops on arterial streets.
- Freeway Incident Detection and Management Systems This approach is an effective way to alleviate non-recurring congestion.
- Highway Information Systems These systems provide travelers with real-time information that can be used to make trip and route choice decisions.
- Advanced Traveler Information Systems This method provides an extensive amount of data to travelers, such as real-time speed estimates on the web or over wireless devices, and transit vehicle schedule progress.

CHAPTER 14: RECOMMENDATIONS

INTRODUCTION

Recommendations are developed based on committee member input, MPO staff input and public input (surveys, public information meetings), the Transportation Improvement Program (TIP) transportation project lists and local comprehensive planning policies. The TIP project list is selected based on collaboration with local municipalities within the MPO to develop a list of programmed transportation projects as well as illustrative projects.

The following is a summary of recommendations for land use, street and highway transportation projects, freight, multimodal transportation (bicycle and pedestrian facilities), transit system, Safe Routes to School Program, input from surveys/public information meetings and policy recommendations.

LAND USE

Land use recommendations include the implementation of adopted land use policies within the TMA planning area boundaries.

TRANSPORTATION (STREET AND HIGHWAY)

The recommendation for the implementation of adopted policies also applies to the transportation policies.

USH 41 is the primary facility serving the Appleton (Fox Cities) TMA. WisDOT and the MPO should plan to expand the capacity of the facility from 4-lane to 6-lane from Appleton to Green Bay in the long-term future. Additionally, the USH 41 corridor was studied and will be upgraded to interstate standards. The interstate conversion project began in 2005 when the federal government identified 142 miles of USH 41 from Milwaukee to Green Bay as a candidate and added to the US Interstate Highway System. Resigning approximately 3,500 signs is expected to start in September 2015.

WisDOT notes that SAFETEA-LU legislation initially identified the south terminus as the Mitchell Interchange (I-94/I-894) in Milwaukee. However, the Interstate Conversion study team elected to extend the corridor concurrent with I-94 south approximately 33 miles to the I-94/US 41 interchange [in Illinois] for a number of reasons, including:

- It links Wisconsin metropolitan areas and markets to the greater Chicago metropolitan area. Chicago is the economic epicenter of the entire Midwest and a key hub near the end of the corridor.
- With the extension into Illinois, the interstate route becomes a true interstate route with a total length of 175 miles.

http://www.dot.state.wi.us/projects/neregion/41/index.htm. (06/05/14)

² http://www.wisconsindot.gov/news/releases/310-nr.htm. (02/13/15)

The extension will allow the signing for the cardinal direction to be north/south rather
than the current east/west signing. A long-term goal of reducing driver confusion when
driving north on a roadway signed as "west" can be realized for the northern Illinois and
southern Wisconsin areas.

Designating the highway as an interstate is expected to bring economic growth, increase the safety of the road, create a corridor identity and bring broader benefits to the State of Wisconsin. According to WisDOT, there are several items that were completed to bring US 41 to interstate, standards including:

- a signed environmental document;
- approved formal conversion request package; and
- federal grandfathering legislation to allow oversize/overweight trucks to continue to use the highway.³

It is expected that the entire project will cost between \$8 and \$12 million dollars and would involve replacing/revising signs including both the large green signs and the smaller guide signs on the side roads directing traffic to the interstate, revising existing sign bridges, installing new sign bridges, and performing traffic control.⁴

USH 10/STH 441 are additional important facilities serving the Appleton (Fox Cities) TMA. Analysis shows that the highways will likely be operating at or over capacity. WisDOT has planned for the expansion of USH 10 and STH 441 in the tri-county area with work beginning in 2014. The WIS 441 Tri-County Project will reconstruct and expand US 10/WIS 441 from four to six lanes from Cold Spring Road to about 1/2 mile east of Oneida Street (approximately 6 miles).⁵

USH 41/STH 441 is an additional vital interchange that could be a candidate for a free flow systems interchange, similar to what is currently under construction at USH 10/USH 41. (This is a long term recommendation.)

Miscellaneous Road/Corridor Recommendations

TMA staff support regional improvements to the following corridors (note no exact timeframes are established):

- Monitor traffic volumes from USH 10 east of the TMA planning area boundaries; investigate if expansion from two to four lanes would be necessary over the long term future; also work to include multi-use trails with this potential expansion.
- Work with municipalities to implement complete streets design concepts (where possible and practical) when the College Avenue/CTH CA corridor is due for reconstruction (long term; refer to ECWRPC Appleton TMA and Oshkosh MPO Bicycle/Pedestrian Plan, 2014).
- Work with municipalities to implement complete streets design concepts (where possible and practical) when the County BB/Prospect Avenue corridor is due for reconstruction

³ Ibid. (06/05/14)

⁴ http://www.dot.wisconsin.gov/projects/neregion/41/faq.htm. (06/05/14)

⁵ http://us41wisconsin.gov/wis441/overview/. (06/10/14)

- (long term; refer to ECWRPC Appleton TMA and Oshkosh MPO Bicycle/Pedestrian Plan, 2014).
- Complete the gap in the off-road trail along CTH A from approximately Indian Point Road in the Town of Vinland/Town of Oshkosh to the City of Neenah.

Road Safety Considerations

Map 6-5 displays the crash data for the Appleton (Fox Cities) TMA; classified from low crash density to high crash density. A note on the density calculation: the GIS density calculations should be viewed "qualitatively" in the sense that darker (red areas) are higher crash areas and lighter (green areas) are lower crash areas relative to the overall crash data. Red areas mean that relative to the region as a whole, these areas have more crashes compared to the total average number of crashes; green areas mean that relative to the region as a whole, these areas have fewer crashes compared to the total average number of crashes from 2005 to 2013.

High crash areas include (major corridors):

- USH 41 interchanges through the entire Fox Cities
- STH 10/STH 441 interchanges through the entire Fox Cities
- STH 47 corridor
- STH 96 corridor
- HWY 125/CTY CA/College Avenue
- CTH OO/Northland Avenue

Staff will continue to collect and analyze crash information for intersections and roadways throughout the Appleton (Fox Cities) TMA and present this information to committee members and decision-makers. This information will be used to determine and identify high-risk areas so decision-makers can develop solutions to reduce incidents.

Interchanges and Intersection Designs (Diverging Diamond Interchanges and Roundabouts)

Safety and mobility of all transportation users (motorists, bicyclists, pedestrians, etc.) should be paramount when considering redesigning interchanges and intersections within the TMA. Where possible and practical, staff recommends the planning and engineering of innovative interchange designs such as diverging diamond interchanges and roundabouts at select intersections within the TMA planning area. Both diverging diamond interchanges and roundabouts have shown to be both safer and more efficient traffic in moving traffic volumes for motorists, bicyclists and pedestrians.^{6,7} Sufficient planning and education/outreach to inform the public about these designs should be considered if plans are made to construct diverging diamond interchanges and roundabouts.

A diverging diamond interchange is expected to be constructed as part of the WisDOT US Highway 10/State Highway 441 Expansion Project planned for the start of construction in 2014 and completion expected by 2019. The diverging diamond interchange will be constructed at US Highway 10 (Oneida Street) and State Highway 441 interchange. **Figure 14-1** below shows a conceptual engineering rendering of the diverging diamond interchange project.

Transportation Improvement Program Project Listings

Table 14-1 provides a list of specific modal recommendations via the Transportation Improvement Program (TIP) for program years 2015-2018 and is an abbreviated table of the one found within ECWRPC's TIP document. The projects listed are those that are programmed projects (listed by order of TIP number) as well as illustrative (potential for future funding) projects. The illustrative projects are listed after the programmed projects (listed by map number). Note that this listing of projects is current as of 8/20/14. For the most current TIP project listings and specifics on funding, please consult ECWRPC or visit the MPO website: www.fcompo.org to find the latest version of our TIP document.

The following text provides a description of the data found in **Table 14-1** below.

Primary Jurisdiction: This column lists the primary implementing jurisdiction on the top line of each project listing. The second line contains the county within which the project is located. The third line is the TIP number, for example (252-14-001). The first number is the federal designated number for the Oshkosh MPO, the second is the year it was added to the TIP. followed by the number of projects added in that year.

Project Description: The first line of the project description lists the highway segment (segment termini a/termini b), the intersection or interchange (highway/highway), or a nonhighway project characterization. The second line characterizes the type of improvement to be undertaken. The third line lists the WisDOT project number, if known. The fourth line contains the federal acronym, if federal funds are being used, the length of the project in miles, and a categorization as preservation (P) or expansion (E) project. The fifth line outlines the total costs in thousands of dollars (for federal, state and local) of the project.

Implementation/Map Number: The year(s) the programmed project is expected to start/end and the funding is released to complete the project; map number in parentheses corresponds to short range/illustrative project on **Map 14-1**.

Source: ECWRPC, 2014

HEALTHY/LIVABLE COMMUNITIES

Recommendations regarding healthy/livable communities include:

- Support for more compact development strategies and land use policies which reduce sprawl and place less strain on resources to support the local infrastructure.
- Support of "Smart Growth" strategies as defined by the American Planning Association (APA)⁸ including:
 - have a unique sense of community and place;
 - o preserve and enhance valuable natural and cultural resources;
 - equitably distribute the costs and benefits of land development, considering both participants and the short- and long-term time scale;
 - o create and/or enhance economic value;
 - expand the range of transportation, employment, and housing choices in a fiscally responsible manner;
 - balance long-range, regional considerations of sustainability with short-term incremental geographically isolated actions;
 - o promote public health and healthy communities;
 - apply up-to-date local and regional performance measures of successful urban and regional growth;
 - encourage compact, transit-accessible (where available), pedestrian-oriented, mixed-use development patterns and land reuse; and
 - increase collaboration and partnerships to advance place-based and regional goals and objectives, while respecting local land-use preferences and priorities.
- In support of public health benefits/active communities, the American Planning Association (APA) also is supporting the following⁹:

⁸ https://www.planning.org/policy/guides/adopted/smartgrowth.htm. (07/16/14)

https://www.planning.org/policy/guides/adopted/smartgrowth.htm. (07/16/14)

- Providing national guidance for sustainable, mixed-use communities designed around mass transit, walking and cycling have been shown to reduce lung and heart disease, obesity, diabetes, and other chronic health conditions.
- Preservation of existing and support new opportunities for local and regional urban and rural agriculture.
- Improved connections between destinations and providing a wide range of active transportation choices, such as transit, trails, and pedestrian and biking facilities.
- A balanced transportation system that makes it possible for residents to walk or ride a bicycle to a store, school or work.
- Compact neighborhoods with a mix of uses that make it easy for residents to walk or bicycle to a store, school or work. Leaders ensure that public health issues are a guiding consideration in land-use planning decisions.
- Adoption of Healthy School Sites, Facilities, and Policies. Where schools are located plays a large part in whether or not children can walk or bike to them. Schools that are located in the heart of a neighborhood are more easily reached by children without automobiles. School curricula and policies in support of active living can foster daily opportunities for physical activity.
- Neighborhood parks that are within walking and biking distance of a person's home or work to encourage greater physical activity, including shared-use paths (or trails) that link homes, work, commercial centers, public transit, and community facilities.
- State and local officials leveraging, securing, and dedicating funding for active living.
- Active Community Environments (ACEs) kits: The ACEs kit was developed by the Wisconsin Nutrition, Physical Activity and Obesity Program as a way to guide communities in developing a built environment that makes it easy to be physically active on a routine basis. The kit utilizes five steps to achieve this built environment:
 - Step 1: Getting Started. Convene a meeting of key stakeholders to have an initial discussion on possible individuals and community assets that could help further your mission.
 - Step 2: Assessment. Utilize the ACEs Assessment Checklist to assess the needs of the community.
 - Step 3: Strategies and Resources. Review and select strategies and resources provided in the ACEs kit that align with your community's needs.
 - Step 4: Using the assessment answers, survey responses, interview results and other data to prioritize your initiative components and to set goals and objectives.
 - Step 5: Set up a process to monitor progress and make necessary changes.
 Continue to revise the plan to create and maintain a healthy environment for all residents and visitors.

FREIGHT

Recommendations regarding freight transportation within the TMA are consistent with those outlined in WisDOT publications *Connections 2030 Long Range* Plan and the *Wisconsin Rail Plan 2030*.

Connections 2030 Long Range Plan recommendations/policies should be centered on this plan's seven interconnected themes. These broad themes are applied throughout WisDOT's planning document, but can be readily applied to the transportation/freight network as practical, common sense solutions for the TMA to adopt.¹⁰

Recommendations call on the state and the MPOs/TMAs to:

- preserve and maintain Wisconsin's transportation system;
- promote transportation safety;
- foster Wisconsin's economic growth;
- provide mobility and transportation choice;
- promote transportation efficiencies;
- preserve Wisconsin's quality of life; and
- promote transportation security.

WisDOT has also classified various interstates and highways through the state based upon their corridor/geographic significance. These various routes/corridors were identified to help bridge WisDOT's policies and apply them to more regional scales. Within east-central Wisconsin, these important freight corridor routes include:

- Fox Valley (USH 41/future Interstate 41 from Milwaukee to Green Bay)
- Lake to Lake (USH 10 intersecting with STH 441 east to Manitowoc and Two Rivers)
- Wolf Waupaca River (USH 10 intersecting USH 41 west to Stevens Point)

These three regional corridors are vital to the economic health and development of the TMA and beyond.

Wisconsin Rail Plan 2030 recommendations involve the following strategies outlined by WisDOT in their plan and applied to the TMA region¹¹ (a complete list can be found in the Freight Chapter of this LRTP):

- Assume the role of facilitator and advocate for freight between public and private interests [at the TMA level].
- Collect and analyze data to support freight planning.
- Work with railroads to ensure that appropriate rail service is provided to all shippers statewide.
- Preserve corridors for future rail use.

MULTIMODAL TRANSPORTATION

Bicycle and Pedestrian Connections

Recommendations for improved connectivity to bicycle and pedestrian modes of transportation include the following (please refer to Chapter 10 for full recommendations):

¹⁰ http://www.dot.wisconsin.gov/projects/state/docs/2030-chapter1.pdf. (06/26/14)

http://www.dot.state.wi.us/projects/state/docs/railplan-chapter5.pdf. (06/26/14)

- Bicycle facility improvements (installing additional bike racks and bike-friendly infrastructure).
- Intersection enhancements for pedestrians (marked cross walks/pavements, accessible pedestrian signals, sharrows, pedestrian refuge islands, paved shoulders, etc.).
- Utilize the Fox Cities-Oshkosh regional bicycle/pedestrian plan (2014) as a guide for short and long term integration of the bike and pedestrian networks within both MPO regions.
- Infrastructure Related Work/Projects Recommendations: Limit abrupt transitions in the network.
 - Connect neighborhoods to retail/commercial centers and linking multiple types of infrastructure is essential to establishing a network for a multitude of users
 - Consider all types of road users
 - Provide different types of facilities to suite the strengths and special needs of potential users regardless of age, gender and physical activity
- **Non-Infrastructure Recommendations:** Implementation of the 5E's (Education, Encouragement, Enforcement, Engineering and Evaluation).
 - Education: Encompasses efforts to teach, train and facilitate discussion regarding safe driving, cycling and walking skills and techniques and is an important role of raising awareness of multiple road users.
 - Encouragement: Activities such as those that motivate people to choose walking or biking to make trips rather than driving a car. Often times, these activities are coordinated for broad impacts across municipal boundaries.
 - Enforcement: Identifies the needed cooperation of law enforcement officials, legislative bodies and judicial systems to insure equitable application of the law, respecting the right and responsibilities of motorists, cyclist and pedestrians alike.
 - Engineering: Refers to any physical improvement intended to enhance the safety of cyclists and pedestrians.
 - Evaluation: Refers to data collection and methods of analysis used to identify proper use and provide justification for future developments and programs.

Miscellaneous Bicycle/Pedestrian Recommendations

- TMA staff support future projects to create a loop connection of the existing Trestle Trail
 in portions of the City of Neenah, City of Menasha and Town of Menasha. The proposed
 loop would create a circuit through Doty Island to connect with existing trailheads at
 Arrowhead Park in Neenah and the Trestle Trail in the City of Menasha¹².
- Various trestles in Appleton (no longer used for railroads) could also be considered for possible bicycle/pedestrian multi-use trail conversions.

 $^{^{12}}$ $\underline{\text{http://www.postcrescent.com/story/news/local/2015/02/09/neenah-menasha-seek-twin-trestles-trail-loop/23124779/}.~(02/10/15)$

SAFE ROUTES TO SCHOOL (SRTS) PROGRAMS

Recommendations for the regional school districts include:

- increase participation in area SRTS Programs (short term);
- bus schedule training at schools in connection with Safe Routes to Schools Programs, the police department, bicycle rodeos, and other safety efforts (short term);
- promote, maintain and increase student/parent participation for the Walking School Bus Program (as part of the larger SRTS Program) (short term);
- bicycle facility improvements (installing additional bike racks and bike-friendly infrastructure); and
- intersection enhancements for pedestrians (marked cross walks/pavements, accessible pedestrian signals, sharrows, pedestrian refuge islands, paved shoulders, etc.

TRANSIT

System Recommendations

These system recommendations include:

- Reduce route lengths where boarding and alighting counts are low to nonexistent decrease residential service and increase arterial service.
- Eliminate areas of duplicated service between Call-A-Ride/Dial-A-Ride/Connector.
- Extend peak hour service in the afternoons/increase frequency.
- Reduce travel and transfer times.
- Cover more area instead of backtracking on routes.
- Review and adjust routes more frequently than annually.
- Flexible routes that can be adjusted based on bad weather/traffic/etc.
- Initiate discussions with Green Bay Metro on examining intercity bus transportation.
- Service to Fox Cities Stadium for games.
- Renew discussions with Combined Locks for service.
- Make a connection to the VA Milwaukee shuttle in the morning.
- Examine ways to incorporate service requests into service areas without major changes:
 - Affinity Pediatrics in Neenah
 - Intersection of Racine Street and Midway Road
 - Evergreen Drive and Ballard Road medical offices/Park and Ride
 - Railroad Street and Kimberly Avenue in Kimberly
 - Later service to Wal-Mart in Neenah
 - Park and Ride lot in Greenville
 - Indoor Skate Park in Kimberly
 - Time Warner Cable on Plank Road

PASSES AND FARES

Valley Transit should consider the following pass and fare recommendations for future implementation:

- A student bus pass program (K 12/universities/technical colleges).
- Expand the number of outlets where tickets can be purchased.
- Examine online ticket printing.
- A frequent user discounts/rewards program/daily specials.

INFORMATION AND TECHNOLOGY

With regards to information and technology, Valley Transit should consider:

- The use of color coded signage along the routes to match up with route maps.
- Use reflective tape on signage so it is more visible at night.
- Continue to utilize the transit model maintained by the East Central Wisconsin Regional Planning Commission.
- Include minor civil division (MCD) boundaries on all routes maps and riders guides.
- Coordinated expansion of the Bus Buddy Program with Making the Ride Happen to include all age groups.
- Expansion of Intelligent Transportation Systems (ITS) such as:
 - Global positioning systems (GPS) on buses.
 - Cell phone technology with real-time updates (GPS is needed on the buses).
 - Message boards at the transit center with important real time information.
 - Wireless internet on buses.
 - Audio/visual entertainment on buses.

PLANNING AND POLICY

Planning and policy recommendations include:

- Further examination and implementation of a regional transit authority (RTA) pending statewide enabling legislation.
- Expanded involvement in land use planning and development efforts to curb sprawl and facilitate transit oriented development patterns, but continue to maintain extensive service in downtown Appleton and other central business districts where the densities are higher.
- Continue to participate in security/evacuation plans.

MARKETING AND EDUCATION

The following marketing and education-related recommendations are proposed:

- Target potential teen users that choose not to get a driver's license due to increasing costs of vehicle operation and maintenance.
- Invest/market more heavily in the notion that Valley Transit is an affordable alternative to commuting.
- Invest/market more heavily to a vast market of residents not aware of Valley Transit.
- Continue to pursue feasible marketing partnerships with other agencies and organizations.

- Expand discussions with major employers to subsidize transit cost for employees.
- Participation in area Health and Wellness Fairs.

FUNDING

Funding recommendations include the following:

- Continued pursuit of other nontraditional funding opportunities both public and private, for both operation and capital improvements.
- Further examine the staffing of a mobility manager.

IMAGE

- Continue to enhance the public image/perception of the Appleton Transit Center.
- Enhance the public image/perception of public transportation throughout the region by expanding education and outreach efforts particularly to groups not aware of Valley Transit. Future marketing efforts should also focus on the notion that the bus system is alternative to commuting by vehicle.
- Increase staffing presence at the Appleton Transit Center (staff, community leaders, police, etc.).
- Reexamine the Carry-on Policy to have more flexibility for the consumer.

MISCELLANEOUS RECOMMENDATIONS

Recommendations regarding implementing additional strategies involve:

- Encouragement and education of programs like WisDOT's Rideshare and the use of bicycle/pedestrian facilities.
- Capacity Improvements of area roadways (where necessary and practical).
- Access Management (through traffic calming/traffic devices and engineering designs).
- Preservation of existing system/network of the local roads system.
- Preservation (utilizing PASER for local roads and PCI for regional state highways).
- Railroads and bridges (emergency management/preparedness plans) for rerouting traffic in case of emergencies.
- Road design improvements that make safety a priority (may also include/incorporate road diets, additional turn lanes at intersections, improve system user's sight lines).
- Consider work policies such as alternative work schedules, compressed work weeks and flexible working hours as strategies to alleviate peak morning/afternoon rush hour traffic.
- Wittman Regional Airport Business Park: The City of Oshkosh, Winnebago County and Wittman Regional Airport broke ground (September 2014) on the development of a 80 acre parcel of land south of Ripple Avenue on the east side of the airport for future aviation business development. MPO staff supports these efforts for future aviation development and will work with all interested parties to increase collaboration and economic development for the region over the long term future. A recent report titled

¹³ http://www.wittmanairport.com/business-development (9/9/14)

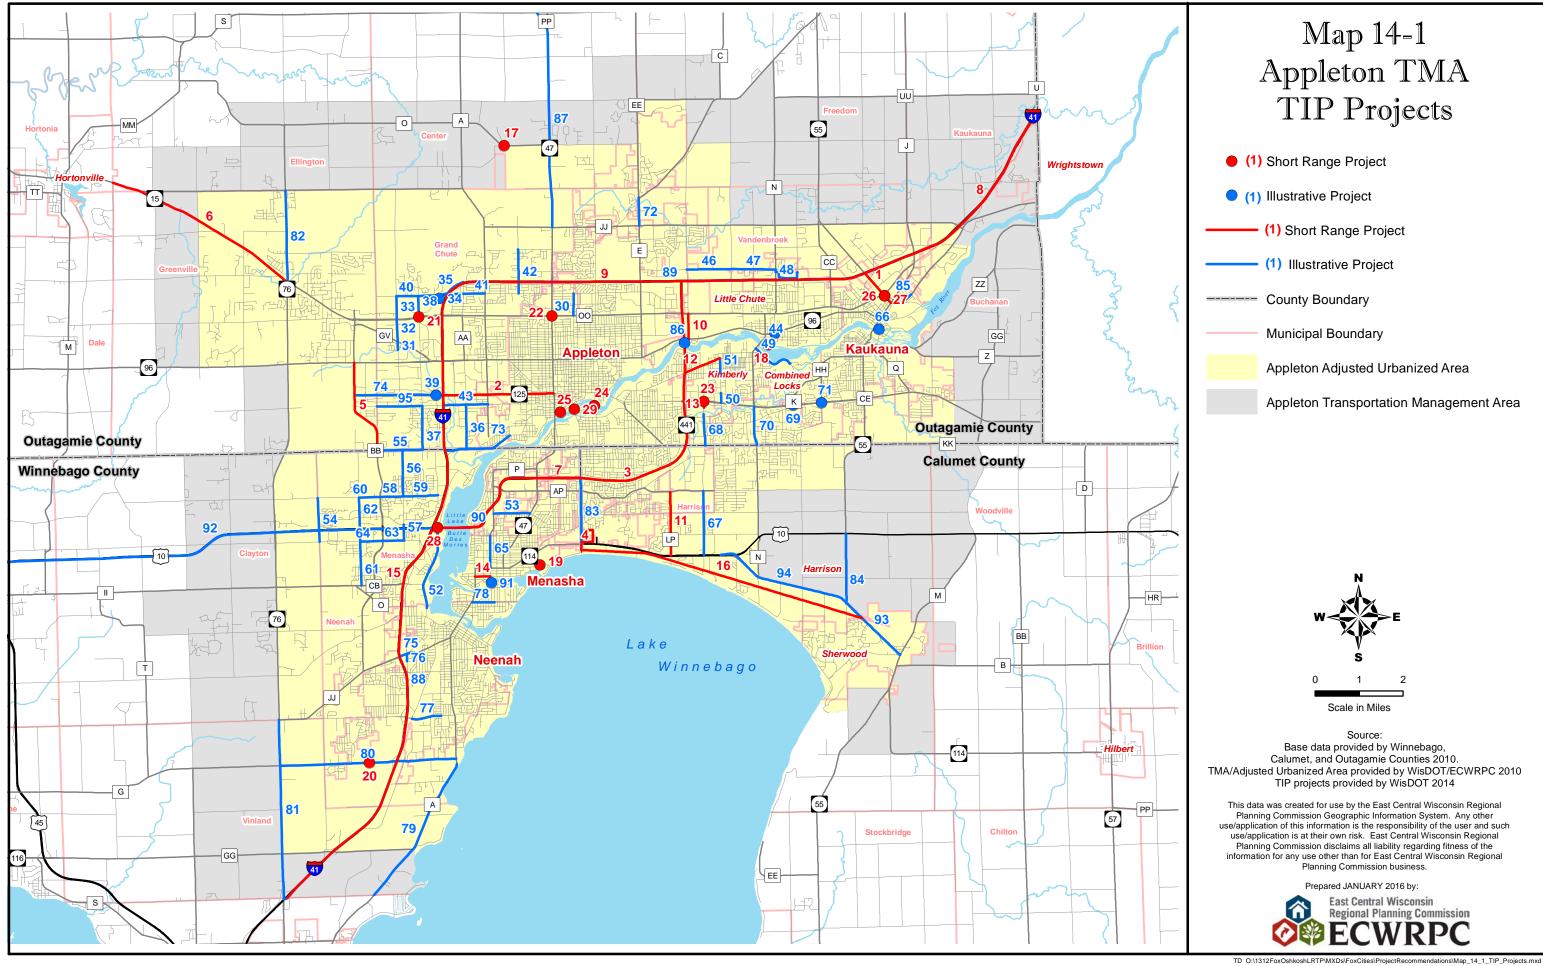

Aerospace Cluster Study Oshkosh Region Defense Industry Diversification Initiative mentions the possible outreach to both the Fond du Lac and Outagamie County Airports to engage in further regional aviation business park collaboration¹⁴. This study will be separated into two phases: phase 1 involves the development of "potential, targeted and validated niche [aviation related] clusters, matching the strengths and weaknesses of the airports and of the central Wisconsin region;¹⁵ phase 2 will center on the creation of an industry-lead Steering Committee "formed of regional, national, and international manufacturers, financial groups, academia and regional stakeholders"¹⁶ The future Steering Committee will work to start the business plan for the aviation business park and work with the initial momentum created by the cluster study.

MPO staff will continue to work with local municipalities to develop and maintain more
efficient ways to monitor inventories (i.e. road maintenance inventories such as PASER
and sign inventories); this could also include assisting local municipalities with collecting
field data if requested by local municipalities.

CHAPTER 15: ENVIRONMENTAL JUSTICE

INTRODUCTION

Executive Order 12898, signed into law by the President on February 11, 1994, directs each federal agency to make environmental justice part of its mission. This is done by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority and low-income populations to the greatest extent practicable and permitted by law. Executive Order 12898 supports prior legislation such as the Title VI of the Civil Rights Act of 1964 and anti-discriminatory laws such as the Americans with Disabilities Act to name a few.

As the Appleton (Fox Cities) TMA is a direct recipient of federal funding via WisDOT and FHWA/FTA, its actions and decisions are directed by WisDOT's principles of environmental justice, which include the following³:

- To avoid, minimize or mitigate disproportionately high and adverse human health and environmental effects, including social and economic effects on minority populations and low-income populations.
- To ensure the full and fair participation by all potentially affected communities in the transportation decision-making process.
- To prevent the denial of, reduction of or significant delay in the receipt of benefits by minority and low-income populations.

Efforts were made to include all individuals within the planning process. Public information meetings were held during all phases of the planning process. Advertisements were published in the local newspaper prior to these meetings. Notices were distributed via mail and e-mail to various committees, organizations, and agencies throughout the planning process for distribution to as many individuals as possible. Locations of public information meetings were crucial in the public involvement process. All meeting locations were selected to include easy access for all individuals, especially transit and alternative mode users, as well as facilities which catered to the mobility needs of the disabled. Various planning documents, including the draft of this plan were open for public comment. (UPDATE) Public participation throughout the process is characterized as consistent. An online survey was created to gather input on the long-range planning process and was made available to the TMA committees and posted on the Fox Cities-Oshkosh MPOs website and ECWRPC's website. It was also sent to the regional municipal clerks to share for distribution.

Staff worked with an organization called Mindmixer, which is a social media/online communications consultant. Mindmixer helped staff to develop additional outreach techniques (such as posting general topics/questions about future regional development) to reach a broader range of individuals. For those interested, more information about Mindmixer can be

¹ http://www.dot.wisconsin.gov/business/engrserv/environment/envareas/ej/index.htm. (07/02/14)

² Ibid. (07/02/14)

³ Ibid. (07/02/14)

found by accessing the following link: http://www.mindmixer.com/. ECWRPC's official Mindmixer page can be found by accessing the following link: http://ecwrpc.mindmixer.com/. Two goals of the as identified in the Vision, Goals and Objectives Chapter of this plan, specifically call out the need to create a transportation system that meets the needs of all residents and are included below:

- Maximum system effectiveness for all residents. Consider the capabilities and transportation preferences of all users and determine the relative effectiveness of various system alternatives.
- Environmental Justice. Ensure that access to transportation systems and the transportation planning process is available to all individuals, regardless of race or socioeconomic status.

TRANSPORTATION IMPROVEMENT PROGRAM (TIP)

Distribution of Minority Populations

Map 15-1 provides an overview of the distribution of minority populations by census tracts (as defined by the Census-American Community Survey 5-year estimates 2008-2012, Table P1). Minority population was calculated by finding the difference in total population to white only population. This map shows that minority populations are found mostly in the northwest portions of the City of Appleton as well as the portions of the Town of Grand Chute, roughly bounded to the north by Highway 15 and to the south by Highway 125/CTH CA. These census tracts range from 551-1,338 in population.

Distribution of Hispanic/Latino Population

Map 15-2 displays the distribution of Hispanic/Latino populations by census tracts within the MPO. The data was provided by the Census-American Community Survey 5-year estimates 2008-2012, Table DP-1. The highest concentration of Hispanic/Latino populations by census tracts within the TMA range from approximately 451-723 people and are located in the western portions of the City of Appleton and the Town of Grand Chute (roughly bounded by Highway 96 to the north, Highway 125/CTH CA to the south and USH 41 to the west). Another area is the portion of the City of Appleton bounded by Highway 47 to the east, the Fox River to the north and USH 10 to the south and west.

Distribution of Population in Poverty

Map 15-3 displays the population in poverty by census tracts as defined by the Census-American Community Survey 5-year estimates 2008-2012, Table S1701. Census uses poverty thresholds established by the Office of Management and Budget. These set dollar value thresholds vary based upon family size and composition to determine poverty status. The highest classed data ranges from 1,101-2,359 people. Populations of poverty are in the western portions of the City of Appleton/Town of Grand Chute and portions of the City of Kaukauna, Village of Combine Locks, the City of Menasha and the City of Neenah.

⁴ http://www.census.gov/hhes/www/poverty/poverty-cal-in-acs.pdf. (08/26/14)

Distribution of Households Making Less Than \$25,000 a Year

Map 15-4 displays the number of households within the MPO making less than \$25,000 by census tracts as defined by the Census-American Community Survey 5-year estimates 2008-2012, Table B19001. The highest classed data ranges from 776-1,365 people. Populations making less than \$25,000 are concentrated in the City of Appleton (roughly bounded by the Fox River to the north and west, Highway 47 to the east and USH 10 to the south.

Language Spoken at Home

Map 15-5 displays the population by census tracts which "speaks English less than very well". The data is provided by the Census-American Community Survey 5-year estimates 2008-2012, Table DP02. The highest classed data ranges from 311-506 people and is concentrated within the western portions of the City of Appleton and the eastern portions of the Town of Grand Chute from approximately north of the Fox River to the USH 41 corridor.

Distribution of Households Making More Than \$100,000 a Year

Map 15-6 displays the population by census tracts making more than \$100,000 a year. The data is provided by the Census-American Community Survey 5-year estimates 2008-2012, Table S1701. The highest classed data ranges from 551-1,200 people and generally clustered in the suburban and rural portions of the TMA.

Key Destinations

Map 15-7 displays important destinations such as school locations, healthcare centers, grocery stores and multi-unit housing and their relationship to the local transportation system routes. By visual inspection, the local transportation system provides ample service to or near these key destinations. Transportation officials should be open to adjusting the routes if necessary as areas change or if other key destinations are added.

Distribution of Households with No Car

Map 15-8 displays the population by census tracts which have no access to a vehicle. The data is provided by the Census-American Community Survey 5-year estimates 2008-2012, Table B08141. The highest classed data ranges from 100-300 and can be found in clustered in rural areas of the TMA planning area (north and west of City of Appleton).

Distribution of Households with One or More Cars

Map 15-9 displays the population by census tracts which have access to one or more vehicles. The data is provided by the Census-American Community Survey 5-year estimates 2008-2012, Table B08141. The highest classed data ranges from 3,377-5,441 and are scattered throughout the TMA area; no clear geographic clustering is evident from urban to rural portions of the TMA.

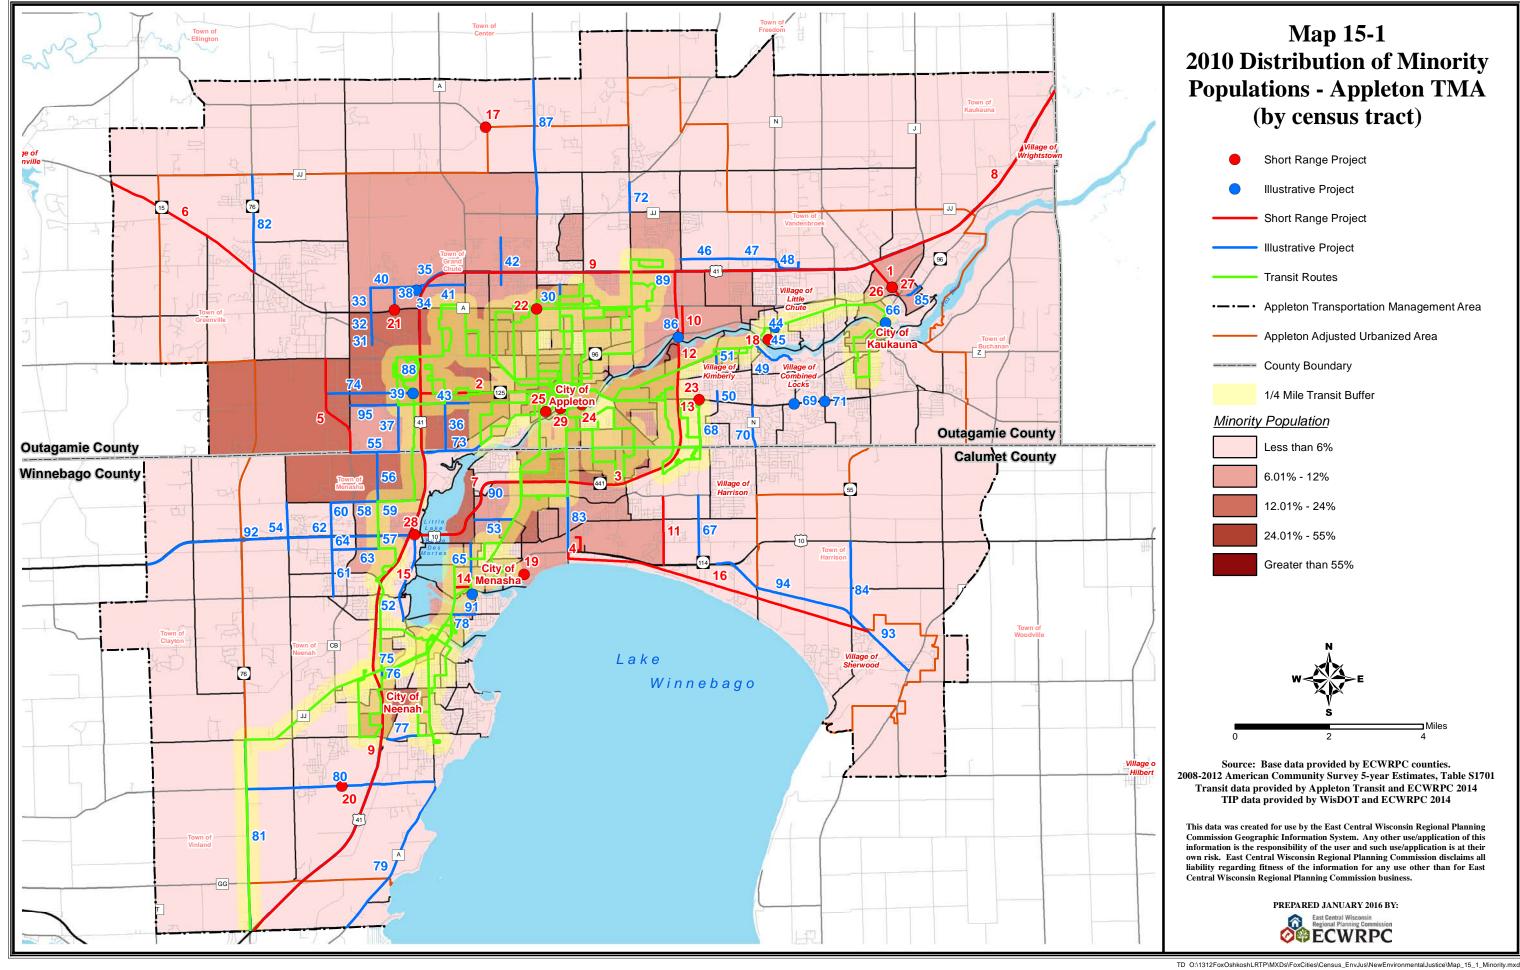

ECONOMIC IMPACTS

The LRTP has the potential to extend into economic and social arenas. Levels of service on roadways, multimodal opportunities, and accessibility for businesses are all issues to be considered. If levels of service on the transportation network decline during the planning period, the potential for more time spent on roadways could be significant. Additional business and personal travel time translates into increased transportation costs. However, economic incentives exist to keep business travel expenses to a minimum, and policies within the plan target the need to maintain acceptable levels of service on roadways.

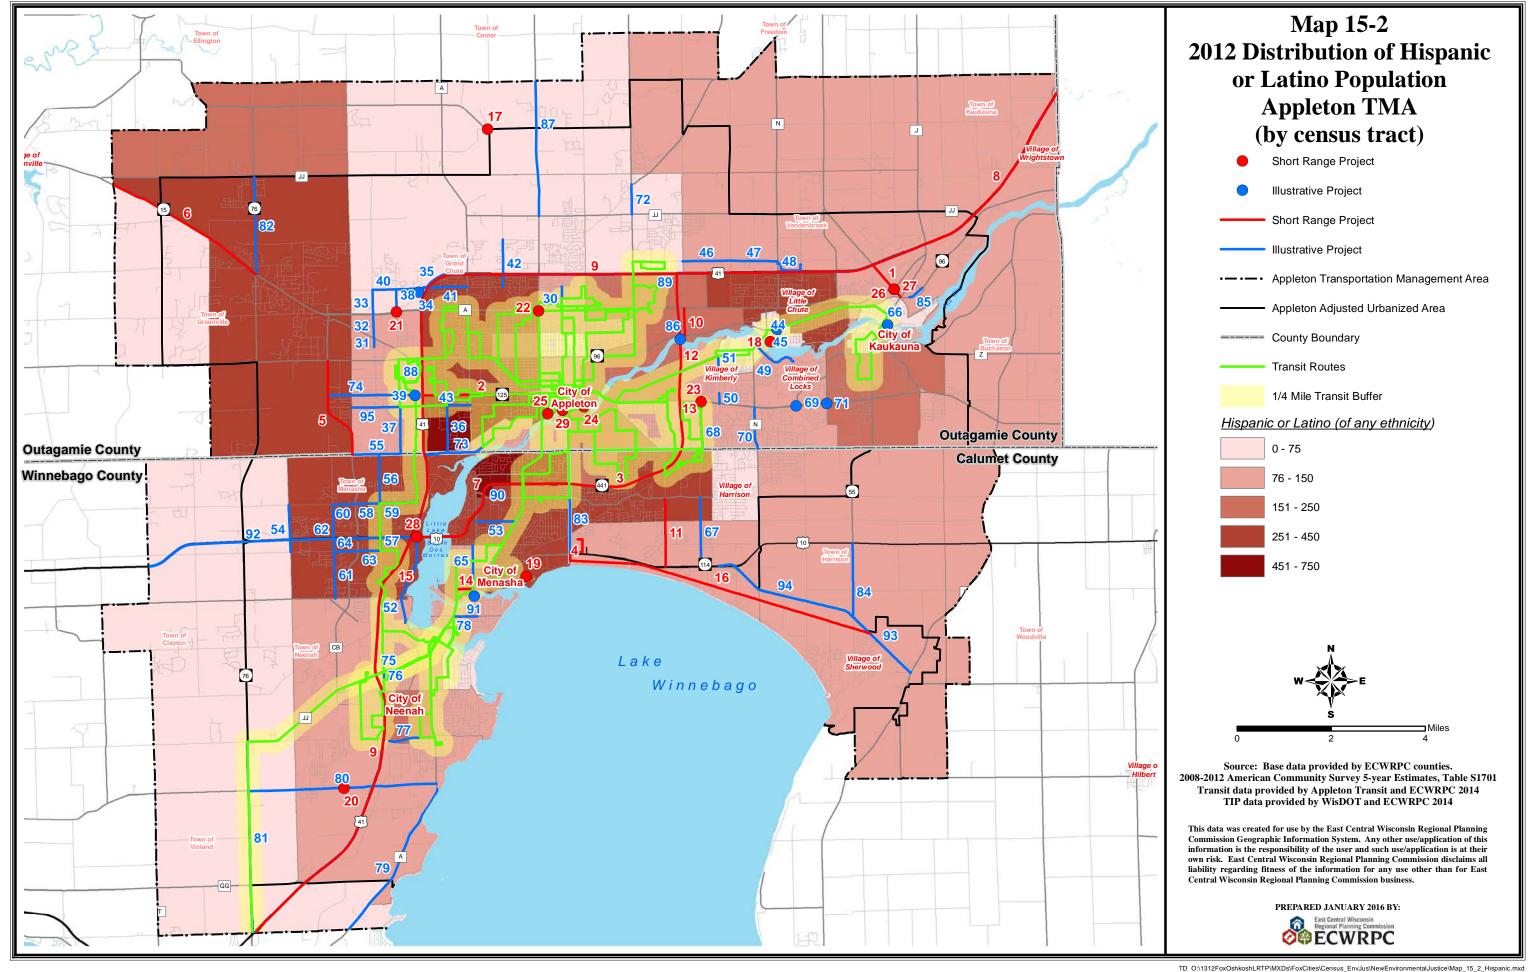

Focusing on maintaining and improving existing facilities and multimodal opportunities will provide benefits to businesses and residents. The plan identifies policies, which if enacted, would ensure that appropriate types and levels of multimodal transportation services are provided to the area. Additionally, maintaining and/or improving transportation facilities will enable the transportation system to continue to provide adequate accessibility to agricultural supplies and markets. An integrated transportation system combining different modes, including rail and trucking facilities, enhances the movement of goods and services. Efficiently routing truck traffic and providing joint terminals and delivery services would increase the accessibility of distant suppliers. Enhanced accessibility and multi-modalism will provide incentives for businesses to expand and improve the business climate to attract new businesses.

SOCIAL IMPACTS

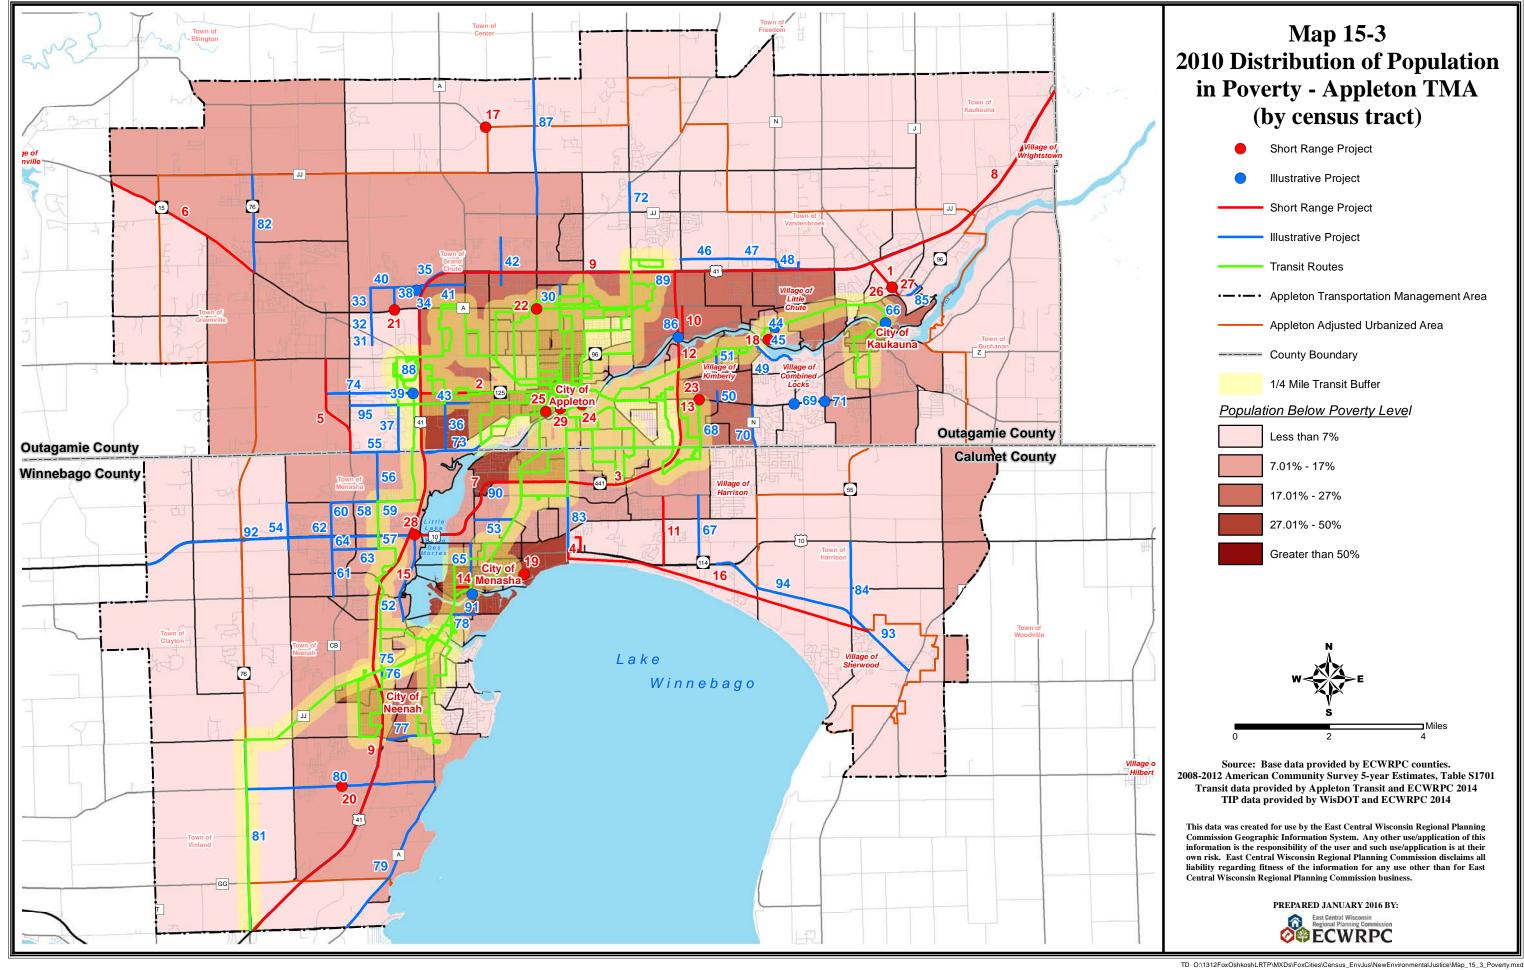

Several objectives within the LRTP note the importance of an efficient and environmentally sound transportation network, along with efficient and environmentally sound land uses. Implementation of these objectives would improve quality of life and make the Appleton (Fox Cities) TMA a more attractive community. The TMA has substantial shoreland along Lake Winnebago, much of which is already developed. This plan include policies such as the preservation and redevelopment of waterfront areas for greater recreational use, preserving scenic easements for viewsheds, and creating multimodal recreational opportunities, such as bicycling or walking along a redeveloped waterfront or park area. Enacting these policies would make the Appleton (Fox Cities) TMA a more attractive place to work, live, and play.

CHAPTER 16: ENVIRONMENTAL MITIGATION

INTRODUCTION

Federal law requires considering environmental mitigation activities in developing transportation plans, in addition to consultation requirements with federal and state natural resource, and management, environmental protection and other agencies.

Metropolitan planning regulations 23 CFR 450.322 (f) (7) state that the plan shall include, at a minimum.

"A discussion of types of potential environmental mitigation activities and potential areas to carry out these activities, including activities that may have the greatest potential to restore and maintain the environmental functions affected by the metropolitan transportation plan. The discussion may focus on policies, programs, or strategies, rather than at the project level. The discussion shall be developed in consultation with federal, state, and Tribal land management, wildlife, and regulatory agencies. The TMA may establish reasonable timeframes for performing this consultation."

This chapter documents compliance with these requirements.

The ECWRPC has conducted extensive additional consultation and system level analysis of the relationship between the *Appleton (Fox Cities) Long Range Transportation/Land Use Plan* projects and various natural features and resources. The consultation list is located in **Appendix H**.

Environmental features and natural resources analyzed include:

- Climate Change
- Geographic and Topography (Scenic Resources)
 - Steep Slopes
 - Niagara Escarpment
- Geologic Features and Farmland Resources
 - Metallic and Non-Metallic Mineral Resources
 - Bedrock
 - Farmland
- Water Resources
 - Watersheds and Drainage
 - Lakes and Ponds
 - Rivers and Streams
 - Designated Trout Streams
 - Exceptional Water Resources
 - Wetlands
 - Floodplains
 - o Groundwater
 - Wellhead Protection Areas
 - Solid and Hazardous Waste Sites
 - Leaking Underground Storage Sites (LUST)

- Wildlife Resources
 - Wildlife Habitat
 - o Rare, Threatened and Endangered Species and Natural Communities
 - Woodlands
- Parks, Open Space and Recreational Resources
 - Wisconsin Department of Natural Resources and Public Lands
 - o Open Space
 - Recreational Trails
 - Heritage Routes and Rustic Roads
 - o Environmental Corridors
 - Natural Areas, County Parks and Nature Centers
 - Local Park and Recreation Areas
 - Proposed Facilities
- Air Quality
- Cultural Resources
 - State and National Registry of Historic Places
 - Architecture and History Inventory
 - Archaeological Sites Inventory
 - Wisconsin Historic Markers
 - Cemeteries
 - Museums and Other Historic and Cultural Resources

The Appleton (Fox Cities) TMA Long Range Transportation/Land Use Plan includes projects that are both committed and planned. For each environmental attribute or set of attributes listed above, a GIS map was prepared showing the Appleton (Fox Cities) TMA Long Range Transportation/Land Use projects and the proximity to each resource featured. To clarify data, an overall map of the Appleton (Fox Cities) TMA showing projects and environmental features is followed by larger scale maps for each of the environmental maps that have been generated.

It should be emphasized that Appleton (Fox Cities) TMA's role in examining issues related to environmental mitigation is to scan system level issues – this is not a project level environmental impact document, which requires field work and specific analysis under the National Environmental Policy ACT (NEPA). Rather the planning regulations require system level or regional analysis to look at cumulative effects of all projects (not those of individual projects) from a high level – which may streamline later project level or site specific analysis to the extent they may flag or act as "an early warning system" to both transportation and resource agencies of issues which may need to be considered in later project level analysis, but more importantly, to assure that the planning and programming process as a whole considers what the long term environmental mitigation issues are for the TMA in light of future plans.

Since this high level view is the core of the TMA planning requirements (as opposed to the project level NEPA process), the legislation and regulations specifically exempt consideration of planning factors and environmental mitigation at the plan or TIP phase from judicial review. Judicial review, however, is the crux of the NEPA project level analysis, a level of analysis that the TMA has no direct role in but to review and comment like any other interested party. This is an important distinction, since this is precisely what the TMA has considered in developing the land use vision in terms of mitigating long term environmental impacts of sprawl and related transportation travel demand, as well as the future analysis contained in this chapter to look at mitigation of cumulative effects of the entire plan.

As such, this high level view may inform the NEPA process, but is quite distinctly different from it by design and intent, since project engineering design decisions are typically not known at the planning stage. However, earlier awareness of potential issues from a high level or overview may better alert implementation agencies of the need to consider issues at the project stage when the project is designed. This may include the presence or absence of historic sites, or possible locations of potential contamination areas that may require mitigation at the project stage when engineering begins, plans are being prepared and a NEPA style project level analysis is required.

POLICY CONTENT

The management and protection of natural resources is governed at many levels; federal, state, regional, county and local.

Federal

At the federal level, several major provisions have been developed to protect our natural resources. Along with other threats to our air, water, forests, deserts, and mountains; transportation projects are required to meet a long list of environmental requirements. In addition, proposed construction projects may involve the need for permits in several areas. A few of these polices are highlighted below:

- The National Environmental Policy Act (NEPA) of 1969, 42 U.S.C. 4332, as amended. This act directs all federal agencies to assess the environmental impacts of proposed major federal actions.
- The Clean Water Act (CWA-1972) establishes the basic structure for regulating discharges of pollutants into the waters of the United States and regulating quality standards for surface waters.¹ The CWA made it unlawful to discharge any pollutant from a point source into navigable waters, unless a permit was obtained.
 - CWA Section 402 establishes the NPDES permit program to regulate point source discharges of pollutants into waters of the United States.² It requires a National Pollutant Discharge Elimination System Storm Water discharge permit for construction projects which involve land clearing of five acres or greater. Permit application requirements include the name of receiving water, identification of soil erosion controls during construction and identification of measures to control pollutants in storm water discharges that occur after construction. These requirements reduce impacts on water quality during and after construction.
 - CWA Section 404 establishes a program to regulate the discharge of dredged and filled material into waters of the United States, including wetlands.³ This program ensures that chemical, physical, and biological integrity of these waters is protected from placements of dredged or fill materials that could permanently destroy or alter the character of these valuable resources. The Section 404

http://water.epa.gov/type/oceb/habitat/cwa402.cfm.

³ http://water.epa.gov/type/oceb/habitat/cwa404.cfm.

Program (including Section 10 waters⁴) that pertains to coastal waters in Wisconsin is administered by the U.S. Army Corps of Engineers while the portion of the program that deals with non-coastal waters is administered by the WDNR.

- Safe Drinking Water Act (SDW-1974) was passed to protect public health by regulating the nation's public drinking water supply. The law was amended in 1986 and 1996 and requires many actions to protect drinking water and its sources: rivers, lakes, reservoirs, springs, and ground water wells.⁵
- The *Clean Air Act (CAA-1970)* is the comprehensive federal law that regulates air emissions from stationary and mobile sources. It ensures that transportation plans, programs and projects conform to Wisconsin's air quality implementation plans. The Clean Air Act, along with the Congestion Mitigation and Air Quality Improvement sections of ISTEA, apply to air quality non-attainment and maintenance areas. This act is allowing EPA to take steps to limit greenhouse gas pollution from large sources.
- The Endangered Species Act (1973) "provides for the conservation of species that are endangered or threatened throughout all or a significant portion of their range and the conservation of the ecosystems on which they depend". It "requires federal agencies, in consultation with the U.S. Fish and Wildlife Service and/or the NOAA Fisheries Service, to ensure that actions they authorize, fund, or carry out are not likely to jeopardize the continued existence of any listed species or result in the destruction or adverse modification of designated critical habitat of such species".
- Rivers and Harbors Act of 1899, Section 10 applies to the construction of bridges, causeways, dams and dikes.⁹
- Executive Order 11990, signed by President Jimmy Carter on May 24, 1977, protects wetlands.¹⁰
- National Historical Preservation Act of 1966, Section 106, as Amended requires federal agencies to insure that their actions (grants, funding, permits, activities such as highway building, etc.) do not adversely affect archaeological sites in or eligible for the National Register of Historic Places.¹¹

National Organizations

• American Association of State Highway and Transportation Officials (AASHTO)
The FHWA has adopted the American Association of State Highway and Transportation
Officials (AASHTO) Highway Drainage Guidelines, Vol. III, "Erosion and Sediment
Control in Highway Construction," 1992. Since 1992, various updates to the guidelines

⁴ Section 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 403), approved 3 March 1899, prohibits the unauthorized obstruction of a navigable water of the U.S.

http://water.epa.gov/lawsregs/rulesregs/sdwa/index.cfm.

http://www2.epa.gov/laws-regulations/summary-clean-air-act.

http://www.epa.gov/air/caa/challenges.html.

http://www2.epa.gov/laws-regulations/summary-endangered-species-act.

http://water.epa.gov/lawsregs/guidance/wetlands/sect10.cfm.

http://water.epa.gov/lawsregs/guidance/wetlands/eo11990.cfm.

http://www.cr.nps.gov/local-law/nhpa1966.htm.

have been made. For example, the 1999 edition of the Guidelines is a metric version of the 1992 edition and contains new Guidelines, Volume XI, XII, XIII and XIV, which are in metric format. The 2007 Edition contains both metric and U.S. Customary units, replaces the Volume designations with Chapter designations, and contains a new Guideline, Chapter 15.

These guidelines should be followed on all construction projects funded under title 23, United States Code. These guidelines are not intended to preempt any requirements made by or under state law if such requirements are more stringent. To develop standards and practices of erosion and sediment control on federal-aid construction projects, each state should apply the AASHTO guidelines or apply its own guidelines, if its own guidelines are more stringent. To be consistent with the requirements of section 6217 (g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA), some certain states should follow specific management measures of erosion and sediment non-point source pollution control. Highway construction projects funded under title 23, United States Code, located in states with federally approved coastal zone management programs should utilize "Guidance Specifying Management Measures for Sources of Nonpoint Source Pollution in Coastal Waters," U.S. EPA, January 1993. The design erosion control (EC) plan includes all erosion and sediment control considerations made during the planning, location, and project development phases. In general, the design EC plan should accomplish three objectives:

- 1. Limit off-site effects to acceptable levels;
- 2. Facilitate project construction and minimize overall costs; and
- 3. Comply with federal, state and local laws and regulations.

In general, the following basic principles apply to all transportation projects:

- 1. Plan the highway project to fit the particular topography, soils, drainage patterns and natural vegetation as much as practicable;
- 2. Minimize the extent and duration of erodible surface area:
- 3. Utilize erosion and sediment control practices to prevent erosion and protect sensitive areas. These practices should be judiciously planned and implemented so as to prevent sediment from entering environmental and customer sensitive areas:
- 4. Apply perimeter control practices, as needed, to protect the disturbed area from off-site runoff and prevent sediment from leaving the construction site;
- 5. Keep runoff velocities low;
- 6. Stabilize disturbed areas as soon as possible after final grade has been attained; and
- 7. Establish and implement a thorough maintenance and follow-up program

State

The State of Wisconsin has had a strong history of conservation ethics when it comes to the protection and management of natural resources. The Wisconsin State Statutes reflect this ethic be the various laws and programs established within them. A listing of some of these policies is listed below:

- Wisconsin Environmental Policy Act (WEPA) of 1972 (Wisconsin State Statutes
 Chapter 1.11)¹². This act contains Wisconsin's environmental policies and is patterned
 after the national environmental policies incorporated in NEPA. It requires state agencies
 to study, describe and consider environmental impacts in their actions.
- Non-Metallic Mining Reclamation; Oil and Gas; Ferrous Metallic Mining (Wisconsin State Statutes Chapter 295), among other things, establishes non-metallic mining reclamation rules.¹³
- Endangered and Threatened Species (Administrative Rule Chapter NR 27) protects endangered and threatened and animal and plants and there habitat. 14
- Water Quality Standards for Wetlands (Administrative Rule Chapter NR 103) establishes water quality standards for wetlands.¹⁵
- Shoreland Management Program (Administrative Rule Chapter NR 115) establishes minimum shoreland zoning standards for shoreland subdivision and zoning ordinances.¹⁶
- Wisconsin Floodplain Management Program (Administrative Rule Chapter NR 116)
 provides a uniform basis for the preparation and implementation of sound floodplain
 regulations for all Wisconsin municipalities.¹⁷
- Wisconsin's City and Village Shoreland-Wetland Protection Program (Administrative Rule Chapter NR 117) establishes minimum standards for city and village shoreland–wetland zoning ordinances.¹⁸
- Non-Metallic Mining (Administrative Rule Chapter NR 135)¹⁹ requires reclamation of non-metallic mining sites,
- Storm Water Discharge Permits (Administrative Rule Chapter NR 216) establishes criteria defining those storm water discharges needing WPDES storm water permits so as to minimize the discharge of pollutants carried by storm water runoff from certain industrial facilities, construction sites and municipal separate storm sewer systems.²⁰
- Runoff Management (Administrative Rule Chapter NR 151) establishes runoff
 pollution performance standards for non-agricultural facilities and transportation facilities
 and performance standards and prohibitions for agricultural facilities and practices
 designed to achieve water quality standards.²¹

- Construction Site Erosion Control and Storm Water Management Procedures For Department Actions (Administrative Rule Chapter TRANS 401) was created to establish and implement erosion control and storm water management standards for airport, railroad, highway, and bridge projects which are administered by WisDOT. It establishes minimum performance standards which all projects administered by WisDOT should meet. An erosion control plan and an erosion control implementation plan are also required under Trans 401. Erosion control and storm water management measures should be maintained and inspected prior, during and after construction or maintenance of a transportation facility.²²
- Water Quality Certification (Administrative Rule Chapter NR 299) explains the procedures for certifying projects that impact wetlands.²³
- Time Limits and Fees for Waterway and Wetland Permit Decisions (Administrative Rule Chapter NR 300) describe time limits and fees for waterway and wetland permits.²⁴
- Wetland Compensatory Mitigation (Administrative Rule Chapter NR 350) describes the requirements for the wetland compensatory mitigation program.²⁵
- Exemptions from Water Quality Certification in Nonfederal Wetlands
 (Administrative Rule Chapter NR 351) identify federal materials to be used for
 determining whether certain activities in non-federal wetlands are exempt from water
 quality certification requirements.²⁶
- Chapter 30 Navigable Waters, Harbors and Navigation (Wisconsin State Statues)
 defines and regulates the activities of riparian property owners in or adjacent to public
 navigable waters. Chapter 30 regulates placement of structures, dredging, and similar
 activities; permits for these activities are handled by the Department of Natural
 Resources.²⁷
- Chapter 91 Farmland Preservation (Wisconsin State Statutes) requires the counties to adopt a farmland preservation plan. It addresses Farmland Preservation zoning and agricultural enterprise areas.²⁸
- Section 44.40 Wisconsin Statutes states that archaeological sites can be protected during the course of state agency activities (grants, funding, permits, ground disturbing projects) if the sites have been recorded with the Office of the State Archaeologist.²⁹
- Section 157.70 Wisconsin Statutes states that all human burial sites, including cemeteries and Indian mounds, are protected under state law.³⁰

Local

Calumet County³¹

- Chapter 10 Buildings and Building Regulations, March 16, 1998, revised.
 This chapter contains the Construction Site Erosion Control Ordinance, and the Post-Construction Stormwater Management Ordinance.
- Chapter 18 Environment, effective May 18, 2011. This chapter includes the Non-Metallic Mining Ordinance; the Illicit Discharge and Connection Ordinance and others.
- Chapter 36 Land Preservation, adopted March 15, 2011. This ordinance establishes the *Purchase of Agricultural Conservation Easement (Pace)* Program. The program was established to protect and enhance the investment made in the agricultural economy; preserve working lands; preserve prime farm and forest land, open space, and rural character; protection of water resources, habitat, and other natural resources; and preservation of scenic resources, etcetera.
- Chapter 50 Shoreland-Wetland. This ordinance was saved from repeal. The code states that "All ordinances regarding shorelands and wetlands are excepted from the Code but saved from repeal, and such ordinances shall continue in full force and effect as if fully set forth in this section". There is no other information in the ordinance.
- Chapter 51 Floodplain, adopted June 20, 2006, revised December 16, 2008 and April 17, 2012. This ordinance is the county's floodplain zoning ordinance. Its purpose is to protect life, health and property, and to minimize expenditures of public moneys.
- Chapter 82 Zoning, adopted November 2, 2009; revised July 10, 2010, December 21, 2010, November 1, 2011, and November 4, 2013. The purpose of this chapter is to promote and protect public health, safety, aesthetics, and other aspects of the general welfare. It also aids in implementing the county comprehensive plan and the county farmland preservation plan; promotes planned and orderly development; protect spawning grounds, fish and aquatic life; groundwater and surface water; wetlands; flora and fauna habitats; vegetative shoreland cover; etcetera.

• Outagamie County³²

Chapter 20 Erosion and Sediment Control, adopted March 9, 2004. This
chapter requires the use of best management practices to reduce the amount of
sediment and other pollutants resulting from land disturbing construction
activities on development sites.

³¹ http://www.co.calumet.wi.us/DocumentCenter/View/1225.

https://library.municode.com/index.aspx?clientId=14359.

- Chapter 24 Floods, adopted July 18, 2010. This chapter is known as the floodplain zoning ordinance for the county. The purpose is to protect life, health and property, and to minimize expenditures of public moneys.
- Chapter 38 Natural Resources, adopted June 26, 2001. The purpose of this
 chapter is to establish a local program to ensure the effective reclamation of nonmetallic mining sites on which non-metallic mining takes place.
- Chapter 44 Shoreland-Wetland Zoning, adopted July 1, 1990. This chapter furthers the maintenance of safe and healthful conditions; controls flooding and protects against costly flood damages; prevents and controls water pollution; protects spawning grounds, fish and aquatic life; controls building sites, placement of structures and land uses; and preserves shore cover and natural beauty.
- Chapter 48 Stormwater Management, adopted March 9, 2004. The purpose of this chapter is to set forth long-term, post-construction stormwater requirements and criteria which will diminish the threats to public health, safety, welfare, and the aquatic environment due to runoff of stormwater from land development and land redevelopment activity.
- Chapter 54 Zoning, adopted June 24, 1997. The purpose of this chapter to promote the public health, safety, convenience and general welfare; protect property values and the property tax base; permit the careful planning and efficient maintenance of highway systems; ensure adequate highway, utility, health, educational and recreational facilities; recognize the needs of agriculture, forestry, industry and business in future growth; encourage uses of land and other natural resources which are in accordance with their character and adaptability; provide adequate light and air, including access to sunlight for solar collectors and to wind for wind energy systems; encourage the protection of groundwater resources; preserve wetlands; conserve soil, water and forest resources; protect the beauty and amenities of landscape and manmade developments; provide healthy surroundings for family life; and promote the efficient and economical use of public funds. This chapter contains nine zoning districts including two agricultural districts: Exclusive Agricultural (EAD) and General Agricultural (GAD).

Winnebago County³³

- Chapter 20 Non-Metallic Mining Reclamation Ordinance, adopted June 19, 2001, revised December 21, 2007. This chapter establishes a local program to ensure the effective reclamation of non-metallic mining sites on which non-metallic mining takes place.
- Chapter 23 Town/County Zoning. This chapter is intended to implement the goals, objectives, and policies of the county's comprehensive plan; establish standards, regulations, and procedures for the review of proposed development; and establish minimum standards for the use or development of land within the

³³ http://www.co.winnebago.wi.us/GeneralCode.

county. Article 8 Land Use establishes 14 zoning and five overlay districts. Two districts pertain to agriculture: Agribusiness (A-1) and General agriculture (A-2). While overlay districts include Floodplain, Shoreland-wetland and Shoreland zoning. Chapter 23.15, contains the Winnebago County Construction Site Erosion Control and Stormwater Management Ordinance. Section A covers Construction Site Erosion Control, while Section B encompasses Storm Water Management.

- Chapter 26 Floodplain Zoning Code. This chapter is intended to regulate floodplain development.
- City of Appleton (Calumet, Outagamie and Winnebago counties)³⁴
 - Chapter 20 Utilities, Article VI. Stormwater Management Standards and **Planning** regulates uncontrolled post construction run-off management requirements that will diminish the threats to public health, welfare and aquatic environment.
 - Chapter 23 Zoning, Article XVII. Historic Preservation, Article X. Floodplain Zoning and Article XI. Shoreland/Wetlands Regulations. The purpose of the Historic Preservation section is to protect, enhance and preserve improvements, sites and districts which represent or reflect elements of Appleton's cultural, social, economic, political, artistic and architectural history. The Floodplain Ordinance is intended to regulate floodplain development, while the Shoreland Zoning Ordinance was adopted in 2014 (see Chapter 23, Article XIX of the Municipal Code).35
 - Chapter 24 Erosion and Sediment Control. The purpose of this ordinance is to further the maintenance of safe and healthful conditions; prevent and control water pollution; prevent and control soil erosion; protect spawning grounds, fish and aquatic life; control building sites, placement of structures and land uses; preserve ground cover and scenic beauty; and promote sound economic growth, by minimizing the amount of sediment and other pollutants carried by runoff or discharged from land disturbing activity to waters of the state within the City of Appleton.
- City of Kaukauna (Calumet and Outagamie counties)³⁶
 - Chapter 15 Historic Preservation. The intent of the ordinance is to protect. enhance, perpetuate, and use improvements or sites of special character or special architectural, archeological, or historic interest or value as a public necessity and is required in the interest of health, prosperity, safety, and welfare of the people.
 - Chapter 16 Shoreland-Wetland Zoning. The purpose of this ordinance is to maintain the storm and floodwater storage capacity of wetlands; prevent and control water pollution by preserving wetlands; protect fish, their spawning

³⁶ http://www.cityofkaukauna.com/media/84009/municipal%20code.pdf.

http://www.appleton.org/i/p/municode.pdf.
 Email correspondence with City of Appleton Community and Economic Development Department, 4/24/15.

grounds, other aquatic life, and wildlife by preserving wetlands and other aquatic habitat; prohibit certain uses detrimental to the shoreland-wetland area; preserve shore cover and natural beauty; etcetera.

- Chapter 17 Zoning Code. The zoning code contains the City's Floodplain Ordinance (Section 17.07) and the Conservancy District (CN).
- Chapter 20 Floodplain Zoning. This chapter shall apply to all lands in the City that would be inundated by the regional flood. The purpose of this chapter is to provide a uniform basis for the preparation, implementation, and administration of sound floodplain regulations for all City floodplains.
- Chapter 22 Stormwater Management. This ordinance regulates Construction Site Erosion, Post-Construction Stormwater Management, Illicit Discharge and Connection Ordinance.
- City of Menasha (Calumet and Winnebago counties)³⁷
 - Title 6 Public Works, Chapter 6 Construction Site Erosion Control, update July 20, 2011. The purpose of the Site Erosion Control Ordinance is to prevent and control water pollution; prevent and control soil erosion; protect spawning grounds, fish and aquatic life; control building sites, placement of structures and land uses; preserve ground cover and scenic beauty; and promote sound economic growth.
 - Title 6 Public Works, Chapter 7 Post-Construction Storm Water Management. The intent of the Post-Construction Storm Water Management Ordinance is to regulate post construction storm water discharges to waters of the state.
 - Title 6 Public Works, Chapter 8 Storm Water Illicit Discharge and Connection. This ordinance establishes methods for controlling the introduction of pollutants into the municipal separate storm sewer system (MS4) in order to comply with requirements of the Wisconsin Pollutant Discharge Elimination System (WPDES) permit process.
 - Title 13 Zoning, Chapter 2 Shoreland-Wetland Zoning. The purpose of this
 chapter is to prevent and control water pollution; protect spawning grounds, fish
 and aquatic life; control building sites, placement of structures and land uses;
 and preserve shore cover and natural beauty.
 - Title 13 Zoning, Chapter 3 Floodplain Zoning. The purpose of this Chapter is to provide a uniform basis for the preparation, implementation and administration of sound floodplain regulations for all floodplains within the City of Menasha.

³⁷ http://www.cityofmenasha-wi.gov/content/government/city_code/(2)table_of_contents.php.

City of Neenah (Winnebago County)³⁸

- Chapter 22 Environmental Control. This chapter contains the following ordinances: Floodplain Zoning (Article II – adopted May 17, 2006), Wetland and Shoreland Zoning (Article III), Construction Site Erosion Control and Post-Construction Stormwater Management (Article IV – adopted September 3, 2008) and Illicit Discharge and Connection to Stormwater Sewers (Article V).
- Chapter 23 Historic Preservation. The intent of the ordinance is to protect, enhance, perpetuate, and use improvements or sites of special character or special architectural, archeological, or historic interest or value as a public necessity and is required in the interest of health, prosperity, safety, and welfare of the people.

Village of Combined Locks (Outagamie County)

 Follows storm water discharge permit requirements imposed by the Wisconsin Department of Natural Resources as required by NR216.

• Village of Harrison (Calumet County)³⁹

- Chapter 105 Construction Site Erosion Control Zoning. The purpose of this chapter to further the maintenance of safe and healthful conditions; prevent and control water pollution; prevent and control soil erosion; protect spawning grounds, fish and aquatic life; control building sites, placement of structures and land uses; preserve ground cover and scenic beauty; and promote sound economic growth by minimizing the amount of sediment and other pollutants carried by runoff or discharged from land disturbing construction activity to waters of the state in the town.
- Chapter 113 Stormwater Management and Illicit Discharge. This chapter contains the following: Stormwater and Surface Water Regulations (Article II), Ditch and Watercourse Maintenance (Article III), Illicit Discharge and Connection (Article IV), and Post-Construction Stormwater Management (Article V).
- Chapter 117 Zoning. The purpose of this chapter is to promote the health, safety, morals, prosperity, aesthetics, and general welfare of the Town of Harrison, Calumet County, Wisconsin. This ordinance contains 13 zoning districts including AG General Agricultural District and NC Natural and Conservancy District.

Village of Kimberly (Outagamie County) 40

 Chapter 295 Historic Preservation, adopted October 3, 1988. The intent of the ordinance is to protect, enhance, perpetuate, and use improvements or sites of

special character or special architectural, archeological, or historic interest or value as a public necessity and is required in the interest of health, prosperity, safety, and welfare of the people.

- Chapter 425 Stormwater Management and Erosion Control. This chapter contains the following ordinances: Construction Site Erosion Control (Article II), Post Construction Stormwater Management (Article III), and Illicit Discharge or Connection to Storm Sewers.
- Chapter 495 Floodplain Zoning. This chapter is intended to regulate floodplain development.
- Chapter 508 Shoreland-Wetland Zoning. The purpose of this chapter is to prevent and control water pollution; protect spawning grounds, fish and aquatic life; control building sites, placement of structures and land uses; and preserve shore cover and natural beauty.
- Village of Little Chute (Outagamie County)⁴¹
 - Chapter 20 Floodplain Zoning. This chapter is intended to regulate floodplain development to protect life, health and property.
 - Chapter 22 Historic Preservation Code. This chapter is intended to safeguard the village's historic, prehistoric and cultural heritage, as embodied and reflected in such historic structures, sites and districts.
 - Chapter 34 Public Utilities. This chapter contains the following ordinances; Illicit Discharge and Connection (Article VII), Construction Site Erosion Control (Article VIII) and Post Construction Stormwater Management (Article IX).
 - Chapter 36 Shoreland-Wetland Zoning (Reserved)
 - Chapter 44 Zoning. The zoning code contains the Conservancy District (CN)
 which is intended to protect natural resources. Generally, this district may include
 swamps, marshlands, river shores, and other land of natural aesthetic value.
- Village of Sherwood (Calumet County)⁴²
 - Ordinance No. 08-97 Illicit Discharge and Connection Ordinance. This
 ordinance establishes methods for controlling the introduction of pollutants into
 waters of the state or the MS4 in order to comply with requirements of the
 Wisconsin Pollutant Discharge Elimination System (WPDES) permit process.
 - Ordinance No. 08-98 Construction Site Erosion Control Zoning Ordinance.
 the purpose of this ordinance to further the maintenance of safe and healthful conditions; prevent and control water pollution; prevent and control soil erosion; protect spawning grounds, fish and aquatic life; control building sites, placement

of structures and land uses; preserve ground cover and scenic beauty; and promote sound economic growth, by minimizing the amount of sediment and other pollutants carried by runoff or discharged from land disturbing construction activity to waters of the state in the Village of Sherwood.

- Ordinance No. 08-99 Post-Construction Storm Water Management Zoning Ordinance. The intent of this ordinance is to reduce the amount of postconstruction storm water and associated pollutants reaching waters of the state.
- Village of Wrightstown (Outagamie and Brown counties)⁴³
 - Chapter 97 Erosion Control, adopted February 1, 1994. The purpose of this chapter to preserve the natural resources; to protect the quality of the waters of the state and the village; and to protect and promote the health, safety and welfare of the people to the extent practicable by minimizing the amount of sediment and other pollutants carried by runoff or discharged from construction sites to lakes, streams and wetlands.
 - Chapter 111 Historical Preservation, adopted December 28, 2005. This
 chapter protects, enhances and perpetuates improvements, sites and districts
 which represent or reflect elements of the village's cultural, social, economic,
 political and architectural history.
 - Chapter 198 Wells, Article II Wellhead Protection Zone, adopted November 30, 1999. This ordinance protects and establishes a wellhead protection zone surrounding the wellhead for Well Number 4.
 - Chapter 204 Floodplain Zoning, adopted September 16, 2008. This chapter regulates floodplain development.
 - Chapter 206 Zoning, adopted March 2, 1082. The zoning ordinance establishes 8 zoning districts. Zoning districts pertaining to the environmental chapter include: Exclusive Agricultural District (E-A), and Conservancy District (C-1).
 - Chapter 208 Shorelands and Wetland Zoning, adopted March 17, 2009. This chapter protects storm and floodwater storage capacity of wetlands; prevents and controls water pollution by preserving wetlands; protects fish, their spawning grounds, other aquatic life and wildlife by preserving wetlands and other aquatic habitat; prohibits certain uses detrimental to the shoreland-wetland area; and preserves shore cover and natural beauty by restricting the removal of natural shoreland cover and controlling shoreland-wetland excavation, filling, and other earth moving activities.
 - All towns within Calumet, Outagamie and Winnebago Counties are regulated under town based zoning ordinances except the towns of Grand Chute, Buchanan, Greenville, Menasha and Harrison. (Under county zoning Ellington, Center, Freedom and Vandenbroek per Outagamie County website)

⁴³ http://www.ecode360.com/WR1772.

Town of Buchanan (Outagamie County)⁴⁴

- Chapter 230 Building Construction, Erosion and Sediment Control (Article VII). The purpose of this ordinance to further the maintenance of safe and healthful conditions; prevent and control water pollution; prevent and control soil erosion; protect spawning grounds, fish and aquatic life; control building sites, placement of structures and land uses; preserve ground cover and scenic beauty; and promote sound economic growth, by minimizing the amount of sediment and other pollutants carried by runoff or discharged from land disturbing construction activity to waters of the state in the Town of Buchanan.
- Chapter 282 Excavations. The purpose of this chapter is to allow reasonable and responsible excavation activities while avoiding these negative consequences.
- Chapter 504 Water, Sewers and Stormwater Management. This ordinance contains the following: Illicit Discharge and Connection (Article II), Stormwater Management (Article III), and Post-Construction Stormwater Management (Article IV).
- Chapter 525 Zoning. The purpose of this chapter to promote the public health, safety, convenience and general welfare; to protect property values and the property tax base; to permit the careful planning and efficient maintenance of highway systems; to ensure adequate highway, utility, health, educational and recreational facilities; to recognize the needs of agriculture, forestry, industry and business in future growth; to encourage uses of land and other natural resources which are in accordance with their character and adaptability; to provide adequate light and air, including access to sunlight for solar collectors and to wind for wind energy systems; to encourage the protection of groundwater resources; to preserve wetlands; to conserve soil, water and forest resources; to protect the beauty and amenities of landscape and man-made developments; to provide healthy surroundings for family life; and to promote the efficient and economical use of public lands. It establishes nine zoning districts including the AED Exclusive Agricultural District and AGD General Agricultural District.
- Town of Center (Outagamie County)⁴⁵
 - Under Outagamie County zoning.
- Town of Clayton (Winnebago County)⁴⁶
 - o Artificial Ponds, Ditches, & Dikes Maintenance Ordinance.
 - Chapter 9 Zoning Ordinance, Article 8 Land Use. The zoning ordinance establishes 15 zoning districts and four overlay districts. Zoning districts pertaining to the environmental chapter include: Agribusiness (A-1) district and

⁴⁴ http://www.ecode360.com/BU2871. Note: Outagamie County is responsible for regulating shorelands and floodplains in the Town of Buchanan.

⁴⁵ http://www.centerwi.com/ordinances.

General agriculture (A-2) district. Winnebago and Outagamie County overlay zoning districts pertaining to the environmental chapter include: Floodplain overlay districts (Winnebago County), Shoreland-wetland overlay district (Winnebago County), and Shoreland zoning overlay district (Winnebago County).

Town of Ellington (Outagamie County)⁴⁷

- Under Outagamie County zoning.
- ELL 03-01 Ordinance Establishing Operational Standards for Non-Metallic Mining in the Town of Ellington, adopted August 13, 2003. The purpose of this ordinance is to protect and manage non-metallic resources in the Town of Ellington and to ensure that non-metallic mining activities are conducted in a manner to minimize environmental degradation and conflicts with other land uses.

Town of Freedom (Outagamie County)⁴⁸

- Under Outagamie County zoning.
- Wellhead Protection Ordinance, adopted August 27, 2007. The purpose of the ordinance is to protect the town's municipal water supply and the areas that the town draws water from.
- Chapter 24 Town of Freedom Stormwater Protection Ordinance. The general purpose of this ordinance is to set forth long-term, post-construction requirements and criteria which will the diminish the threats to public health, safety, welfare and the aquatic environment due to runoff of stormwater from land development and land redevelopment activities.
- Chapter 25 Town of Freedom Erosion and Sediment Control Ordinance. It is the purpose of this chapter to further the maintenance of safe and healthful conditions, prevent and control water pollution, prevent and control soil erosion, protect spawning grounds, protect fish and aquatic life, control building sites, control placement of structures and land uses, preserve ground cover and scenic beauty, and promote sound economic growth. It is also the purpose of this chapter to meet the performance standards in Subchapters III and IV of Ch. NR 151, Wis. Adm. Code, and to meet the requirements for construction erosion in the Phase II National Pollutant Discharge Elimination System (NPDES).

Town of Grand Chute (Outagamie County)⁴⁹

Chapter 275 Erosion and Sediment Control, adopted September 7, 2004. It is the purpose of this chapter to further the maintenance of safe and healthful conditions, prevent and control water pollution, prevent and control soil erosion, protect spawning grounds, protect fish and aquatic life, control building sites, control placement of structures and land uses, preserve ground cover and scenic

http://townofellington.org/ordinances-and-resolutions.

 http://ecode360.com/GR2781?needHash=true.

beauty, and promote sound economic growth. It is also the purpose of this chapter to meet the performance standards in Subchapters III and IV of Ch. NR 151, Wis. Adm. Code, and to meet the requirements for construction erosion in the Phase II National Pollutant Discharge Elimination System (NPDES).

- Chapter 310 Hazardous Substances, adopted January 7, 1997.
- Chapter 463 Stormwater Utility and Management, adopted January 7, 1997.
 The general purpose of Article II Stormwater Management is to set forth long-term, post-construction stormwater requirements and criteria which will diminish the threats to public health, safety, welfare, and the aquatic environment due to runoff of stormwater from land development and land redevelopment activity.
- Chapter 497 Trees and Shrubs, adopted January 7, 1997. Among other things this chapter regulates damage to public trees, excavations and construction near trees.
- Chapter 535 Zoning Ordinance, adopted January 7, 1997. The zoning ordinance establishes 16 zoning districts. Zoning districts pertaining to the environmental chapter include: Exclusive Agricultural District (AED), and General Agricultural District (AGD).

• Town of Greenville (Outagamie County)⁵⁰

- Ordinance 7 Zoning. The zoning ordinance establishes 13 zoning districts and two overlay districts. Zoning districts pertaining to the environmental chapter include: Exclusive Agricultural District (AED) and General Agricultural District (AGD). While the overlay districts include a Gateway and Heritage overlays. The zoning ordinance also contains a section on resource extraction.
- Ordinance 43 Regulating Landscaping in the Town Right-of-Ways. The purpose of this ordinance is to regulate landscape activities in the right of ways.
- Ordinance 52 Drainage Ordinance, April 12, 2010. The purpose of this ordinance is to promote the public health, safety, convenience and general welfare by establishing rules and regulations relating to drainage that will preserve and protect town highways; preserve and protect property values; enhance aesthetics; promote the economical use of town resources; and promote a healthy living environment.

Town of Harrison (Calumet County)

(See Village of Harrison)

⁵⁰ http://www.townofgreenville.com/town/town-ordinances.htm.

• Town of Kaukauna (Outagamie County)51

The town is under town zoning, not county, per the Outagamie County website.
 No information regarding the zoning ordinance exists on the town's website.

Town of Menasha (Winnebago County)⁵²

- Chapter 27 Non-Metallic Mining Reclamation, amended May 7, 2007. The purpose of this chapter is to establish a local program to ensure the effective reclamation of non-metallic mining sites on which non-metallic mining takes place.
- Chapter 31 Zoning Ordinance, adopted March 25, 2013. The zoning ordinance establishes 13 zoning districts and four overlay districts. Zoning districts pertaining to the environmental chapter include: General agriculture (A-2) district. Winnebago and Outagamie County overlay zoning districts pertaining to the environmental chapter include: Floodplain overlay districts (Winnebago County), Shoreland-wetland overlay district (Winnebago County), and Shoreland zoning overlay district (Winnebago County).
- Chapter 32 Construction Site Erosion Control Ordinance, created December 3, 2007. The purpose of this ordinance to further the maintenance of safe and healthful conditions; prevent and control water pollution; prevent and control soil erosion; protect spawning grounds, fish and aquatic life; control building sites, placement of structures and land uses; preserve ground cover and scenic beauty; and promote sound economic growth, by minimizing the amount of sediment and other pollutants carried by runoff or discharged from land disturbing construction activity to waters of the state in the Town of Menasha.
- Chapter 33 Post-Construction Storm Water Management Ordinance, created December 3, 2007. The general purpose of this ordinance is to establish long-term, post-construction runoff management requirements that will diminish the threats to public health, safety, welfare and the aquatic environment.
- Chapter 34 Illicit Discharge and Connection Ordinance, created December 17, 2007. The purpose of this ordinance is to provide for the health, safety, environment and general welfare of the citizens of the Town of Menasha through the regulation of non-storm water discharges into waters of the state or the municipal separate storm sewer system (MS4) to the maximum extent practicable as required by federal and state law.

Town of Neenah (Winnebago County)⁵³

Chapter 20 Ms4 Requirement for Illicit Discharge and Connection. The
purpose of this ordinance is to provide for the health, safety, environment and
general welfare of the citizens of Town of Neenah through the regulation of nonstorm water discharges into waters of the state or the municipal separate storm

⁵¹ http://kaukaunatown.com/ordinances.

⁵² http://www.town-menasha.com/resources/ordinances/.

http://www.townofneenah.com/ordinances.

sewer system (MS4) to the maximum extent practicable as required by federal and state law.

Town of Vandenbroek (Outagamie County)

 The Town of Vandenbroek is under Outagamie County zoning, per the county's website.

Town of Vinland (Winnebago County)⁵⁴

- Title 13 Chapter 1 Zoning Code. The purpose of this Chapter is to promote the health, safety, prosperity, aesthetics and general welfare of the Town of Vinland. It establishes 15 zoning districts including P-1 Institutional & Recreational Park District, A-1 Agri-Business District, A-2 General Farming District and M-3 Extraction or Landfill Overlay District.
- Title 15 Chapter 2 Illicit Discharge Ordinance. The purpose of this Chapter is
 to provide for the health, safety, and general welfare of the citizens of the Town
 of Vinland and protect waters of the state through the regulation of illicit
 discharges to the municipal separate storm sewer system as required by federal
 and state law.

Town of Woodville (Calumet County)

The Town of Woodville is under Calumet County zoning.

Consistency

Information contained on the maps provided in this report was derived from a variety of local, state and federal data sources. An attempt was made to reconcile this information with existing state and local resource agency inventories and maps to ensure consistency. Available plans for protection, development, and use of natural resources were considered in the development of this section. In addition to the data bases referred to within the text, the following data bases and reports were reviewed.

State of Wisconsin Plans

• Land Legacy Plan⁵⁵ identifies places critical to meet conservation and outdoor recreation needs over a 50-year time frame. In all, a total of 229 named Legacy Places were identified. Calumet County has a total of two Legacy Places; Manitowoc-Branch River and the Niagara Escarpment. Legacy Outagamie has a total of two Legacy Places; Duck Creek/Burma Swamp and the Lower Wolf River Bottomlands. Winnebago County has a total of four Legacy Places; Glacial Habitat Restoration Area; Lakes of the Winnebago Pool; Lower Wolf River Bottomlands and Rush Lake. The Appleton (Fox Cities) TMA is part of the Southeast Glacial Plains Ecological Landscape. Conservation needs and opportunities within this landscape include the restoration of wetlands as areas are retired from farming. Thought should also be given to connecting public

⁵⁴ http://www.townofvinland.org/ordinances-and-resolutions.

⁵⁵ http://dnr.wi.gov/topic/lands/landlegacy/.

conservation lands that are isolated to nearby conservation lands. Environmental corridors of sufficient width facilitate the movement of species from one area to another.

- Wisconsin's Wildlife Action Plan Wisconsin's Strategy for Wildlife Species of Greatest Conservation Need, approved August 2005⁵⁶ presents priority conservation actions to protect the species and their habitats. According to the plan, opportunities within the Southeast Glacial Plains Ecological Landscape and within the Appleton (Fox Cities) TMA include the protection of the Niagara Escarpment, glacial eskers and drumlin fields, that are unique and, in some cases world-renowned; linking scattered woodlots and for controlling invasive exotic species; and restoration and management of wetlands and shallow water lakes (e.g., Lake Winnebago Pools).
- State Comprehensive Outdoor Recreation Plan (SCORP), 2011 to 2016⁵⁷ is done every 5 years to identify essential issues that affect the future of Wisconsin outdoor recreation.

Local Plans

Calumet County

- Calumet County Land and Resource Management Plan, 2012 2016, adopted April 12, 2012.⁵⁸ The plan serves as a strategic plan to the county, giving direction to their land and water conservation efforts. It summarizes land and water resource conditions, identifies resource concerns, and outlines strategies for addressing those concerns.
- Calumet County Farm Preservation Plan, adopted in 2010.⁵⁹ The plan focuses on protection of high quality agricultural land that has a minimum degree of conflict with development.
- Calumet County Outdoor Recreation Plan, January 2011.⁶⁰ The plan focuses on a wide range of recreational opportunities provided by outdoor recreation facilities and natural resources.
- Calumet County Smart Growth Plan, adopted May of 2007.⁶¹ The Agriculture, Natural and Cultural Resource chapter states that the levels of resource protection, the density of new development, and the services that support new growth pose questions that ultimately impact the resource base. Land development patterns are directly linked to the natural, agricultural, and cultural resource bases of each community. Therefore, these features need to be considered before making any decisions concerning future development within a community. Development must be carefully adjusted to coincide with the ability of the agricultural, natural, and cultural resource base to support the various forms of urban and rural development. This balance must be maintained to prevent the

deterioration of that underlying and sustaining base, because these resources make each community unique. These features promote civic pride and often create a sense of place.

Outagamie County

- 2010-2015 Outagamie County Land & Water Resource Management Plan (LWRMP)⁶². The LWRPM is updated every five years and addresses soil and water quality concerns using local, state and federal programs.
- Farmland Preservation Plan, 2011, adopted in 2011 and amended in March of 2012. 63 The Outagamie County Farmland Preservation Plan is included in the Outagamie County Comprehensive Plan, Appendix F. The goals of the plan are: (1) to preserve the productive agricultural lands of Outagamie County and encourage the development of agricultural enterprises; and (2) to encourage future urban development to locate near necessary public facilities. The intent of the plan is to meet the requirements of chapter 91 of the Wisconsin State Statutes for Farmland Preservation and help maintain sustainable agriculture economies in the county as well provide an informational base to assist decision makers in the preservation of farmland and agriculture related development within the county.
- 2008 Outagamie County Comprehensive Plan, adopted March 25, 2008.⁶⁴ The objectives of the Agriculture, Natural and Cultural Resource chapter are to preserve the productive agricultural lands of Outagamie County and to encourage future urban development to locate near necessary public facilities.
- Outdoor Recreation and Open Space Plan: 2014-2018, adopted March 11, 2014. The Outdoor Recreation and Open Space Plan is included in the Outagamie County Comprehensive Plan, Appendix E. The purpose of this plan is to provide a program to meet the recreational needs of the residents of Outagamie County in an orderly and efficient manner, as well as to preserve this area's unique natural resources and features. It is intended to provide an informational base to assist decision makers in the management and development of recreational and natural resources.

Winnebago County

2011 - 2020 Land and Water Resource Management Plan⁶⁵. The plan is intended to guide the process for resource management planning and decision making, evaluate land and water resource conditions, identify problems and priorities, and develop a multi-year work plan to address land and water resource problems.

http://www.outagamie.org/modules/showdocument.aspx?documentid=1590.

http://www.co.winnebago.wi.us/sites/default/files/uploaded-files/LWRMP_2011-2020.pdf.

- 2006 Winnebago County Comprehensive Plan, adopted March 21, 2006.⁶⁶ The objectives of the Agricultural, Natural and Cultural Resources of the plan that relate to transportation planning include: Preserve large, contiguous tracts of farmland in rural areas; Protect surface and ground water resources through lake, steam, and river corridor preservation and development policies; Prevent non-point pollution through construction site erosion control, stormwater management, and development that sustains resources; Protect aquatic and wildlife habitat by managing development away from environmental corridors, riparian areas and woodlands; Protect air resources through development that encourages pedestrian traffic and minimizes vehicle miles traveled; and Protect and develop passive and active recreational resources (e.g. parks, biking/hiking trails, hunting & fishing opportunities).
- Comprehensive Outdoor Park and Recreation Plan, 2013 2017.⁶⁷ This report describes existing conditions, projects future growth, and offers recommendations to guide the future growth and development of recreational facilities in Winnebago County. Its intent is to be used as a benchmark and vision for promoting healthy lifestyles and safe recreational opportunities.
- Farmland Preservation Plan, 2012, adopted March 13, 2012. The plan Volume III of the *Winnebago County Comprehensive Plan*. It is intended to guide local efforts related to farmland protection and the promotion of the agricultural sector in Winnebago County during the 15-year period from 2012 through 2026.
- City of Appleton (Calumet, Outagamie and Winnebago counties)
 - City of Appleton Comprehensive Plan, 2010 2030, adopted March 3, 2010. The objectives of the Agricultural, Natural and Cultural Resources chapter that relate to transportation planning include: Maintain the viability of the regional agricultural sector that provides locally grown food for residents and raw materials for Appleton's food processing and other businesses; preserve important natural features and enhance environmental quality throughout the community in order to secure economic, recreational, and health benefits for area residents; and continue and expand efforts to preserve, restore, and interpret important features of Appleton's rich history.
 - City of Appleton Park and Recreation Master Plan adopted in 2010. Due to timing, the latest version of the park and recreation master plan was developed alongside the City of Appleton's comprehensive plan and incorporated into the comprehensive plan as Chapter 18.
- City of Kaukauna (Calumet and Outagamie counties)
 - Kaukauna Comprehensive Plan, adopted January 2013.

68 http://fyi.uwex.edu/winncofarming/draft-plan/.

- Open Space and Recreation Plan, 2010 2015. The report describes existing conditions, projects future growth and makes recommendations to guide the recreational needs of the residents of the city.
- City of Menasha (Calumet and Winnebago counties)
 - City of Menasha Year 2030 Recommended Comprehensive Plan, May 2008.
 - City Of Menasha Open Space and Recreation Facilities Plan 2012-2016, adopted August 6, 2012. The report describes existing conditions, projects future growth and makes recommendations to guide the recreational needs of the residents of the city.
 - Historical & Architectural Resources Survey, City of Menasha, Winnebago County, August 31, 2009. The purpose of the survey is to update a previous survey⁶⁹ of the architectural and historical resources located in the City of Menasha.
- City of Neenah (Winnebago County)
 - Vision 2020 Comprehensive Plan.
 - City of Neenah Comprehensive Outdoor Recreation Plan 2014-2018 (draft).
 The plan is updated every five years and is used to guide future open space, protect recreational character, create new opportunities, and enhance the quality of life for all who live, work, visit and invest in the city.
 - Historical/Architectural Resources Survey: 2004 Addendum, City of Neenah, Winnebago County, July 30, 2004.
- Village of Combined Locks (Outagamie County)
 - Village of Combined Comprehensive Plan 2030. The goals of the Agricultural, Natural and Cultural Resources chapter of the plan that relate to transportation planning include; "Maintain and improve the water quality of surface waters including the Fox River"; and "Protect key natural features and resources such as natural woodlands, ravines, and the riverfront".
- Village of Harrison (Calumet County)⁷⁰
 - Town of Harrison Comprehensive Outdoor Recreation Plan (CORP), dated December 2007.⁷¹ The plan is intended to guide the town in continuing to meet open space and recreation needs of its citizens for the next five years.
 - Town and Village Comprehensive Outdoor Recreation Plan 2015-2019, (CORP) will be updated in 2014-2015 for the next 5-year cycle.

1 http://www.townofharrison.org/uploads/docs/1_Comprehensive_Park_Plan_Web.pdf.

⁶⁹ Completed between 1984 and 1986 by J. Adams & Associates.

The Village of Harrison was incorporated on March 8, 2013. While the website is jointly shared by the Village and Town of Harrison, many documents are dated earlier and therefore reference the town, not village.

Town of Harrison Comprehensive Plan 2004, adopted January 26, 2004, updated January 26, 2010.⁷² The goal of the Agricultural, Natural and Cultural Resources chapter is to "Protect the productive agricultural lands in the town for long term farm use and maintain agriculture as a major economic activity and way of life; and conserve, protect and enhance the natural resources and environmentally sensitive areas that exist in the town.

Village of Kimberly (Outagamie County)

- Village of Kimberly Comprehensive Plan 2030, adopted January 2010. The goals of the Agricultural, Natural and Cultural Resources chapter of the plan that relate to transportation planning include: "Maintain and improve the water quality of surface waters including the Fox River"; and "Protect key natural features and resources such as natural woodlands, ravines, and the riverfront".
- Village of Kimberly Open Space and Recreation Plan, adopted December 2, 2013.⁷³ The report describes existing conditions, projects future growth and makes recommendations to guide the recreational needs of the residents of the village.

Village of Little Chute (Outagamie County)

- Village of Little Chute Comprehensive Plan, adopted December 21, 2005.⁷⁴ The goal of the Agricultural, Natural and Cultural Resources chapter of the plan is to "Conserve, protect, and improve the natural and cultural resources of the Village of Little Chute and the surrounding area".
- Comprehensive Park and Recreation Plan, adopted January 2, 2008.⁷⁵ The
 report describes existing conditions, projects future growth and makes
 recommendations to guide the recreational needs of the residents of the village.

Village of Sherwood (Calumet County)

Village of Sherwood Year 2030 Comprehensive Plan, adopted January 7, 2008.⁷⁶ The goals of the Agricultural, Natural and Cultural Resources chapter of the plan that relate to transportation planning include: "Protect natural resource features in the Sherwood area (Village of Sherwood Land Use Plan, 2000)"; "Preserve natural features like woodlands, wetlands, floodplains, shorelands, and open spaces in order to maintain and enhance community green space"; and "Preserve significant historical and cultural sites, structures, and neighborhoods that contribute to community identity and character".

• Village of Wrightstown (Outagamie and Brown Counties)

Village of Wrightstown Comprehensive Plan, adopted October 21, 2003, amended May 17, 2005, and updated August 16, 2016.⁷⁷ The objectives of the Agricultural, Natural and Cultural Resources chapter of the plan that relate to transportation planning include: "Preserve wetlands, floodplains, and other environmental areas to link various parts of the village and to serve as wildlife corridors, pedestrian trails, and stormwater management areas"; "Maintain and enhance accessibility of public lands along the Fox River"; and "Promote the preservation and rehabilitation of older buildings within the village, especially through adaptive reuse of such buildings when possible".

• Town of Buchanan (Outagamie County)

- Town of Buchanan Strategic Plan. The town is currently in the process of developing a strategic plan that will be used to guide the town over the next five years.
- Town of Buchanan Comprehensive Plan adopted 2007. The goal of the Agricultural, Natural and Cultural Resources Chapter, pertaining to transportation planning, is: "Protect the Quality of Surface and Groundwater".
- Comprehensive Outdoor Recreation Plan, 2013-2017, adopted December 18, 2012.⁷⁸ The Comprehensive Outdoor Recreation Plan (CORP) will help the town in planning, maintaining and improving park and recreational facilities in the community.
- Town of Center (Outagamie County)
 - Town of Center Comprehensive Plan adopted July 13, 2009.
- Town of Clayton (Winnebago County)
 - Town of Clayton Comprehensive Plan adopted December 16, 2009. The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning is to "Protect environmental areas for future generations, recreation, wildlife habitat, and stormwater management."
- Town of Ellington (Outagamie County)
 - Town of Ellington Comprehensive Plan, 2004 2024, adopted June 10, 2004.⁸⁰ The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning is to Protect and enhance the natural resources and environmentally sensitive areas that exist in the town".

 Town of Ellington 5 Year Park and Recreation Plan, adopted February 21, 2002.

Town of Freedom (Outagamie County)

- Town of Freedom Comprehensive Plan, Planning for 2020 and Beyond, adopted June 2003, amended August 12, 2009.⁸¹ The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning is to "Preserve agricultural operations, natural resources, water resources, and wildlife habitat areas in the Town of Freedom to maintain the town's rural character;" and to "Protect Duck Creek and Apple Creek from harmful uses".
- Town of Freedom Comprehensive Outdoor Recreation Plan, 1998.
 Adopted in June of 1998, this plan was prepared by the Park Committee and ECWRPC to offer recommendations in improving park and recreational facilities in the town.

Town of Grand Chute (Outagamie County)

- Comprehensive Plan 2010-2030, adopted in December 2009.⁸² The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning is to "Conserve, protect, and beautify natural resources in the town", more specifically this is "To ensure that development that does occur is sensitive to the environment" and "Preserve the productive agricultural lands of the Town of Grand Chute".
- Town of Grand Chute, Park Trail, Recreation and Open Space Plan, January 2007.⁸³ The plan contains an inventory of existing park, trail, recreation and open space facilities and an analysis of future needs. Town of Grand Chute Comprehensive Outdoor Recreation Strategy (CORS), 2014-2108 adopted March 11, 2014.

Town of Greenville

- Town of Greenville 2030 Comprehensive Plan, adopted March 30, 2009. The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning is to "Protect, enhance, and restore natural/environmental systems within the town so that their functions are maintained and valued by the community."
- Comprehensive Outdoor Recreation Plan 2009 2013, adopted April 13, 2009.⁸⁴ The purpose of this document is to provide guidance for future parks and open space development and acquisition that are intended to improve the quality of life for town residents.

Town Comprehensive Outdoor Recreation Plan (CORP) will be updated in 2014-2015 for the next 5-year cycle.

Town of Harrison

- 2030 Comprehensive Plan adopted March 2004. This will be updated with the village in the 2014-2015 planning segment.
- Comprehensive Outdoor Recreation Plan 2015-2019 (CORP). (See Village of Harrison)

• Town of Kaukauna

o Town of Kaukauna Comprehensive Plan adopted February 8, 2010.

Town of Menasha (Winnebago County)

- 2003 Town of Menasha Comprehensive Plan adopted August 25, 2003⁸⁵. The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning, is "To preserve natural features and amenities and conserve natural and cultural resources for the benefit of present and future generations."
- Town of Menasha Five-Year Parks & Open Space Plan: 2011 2015. 86 This plan addresses park and open space needs for the community through 2015, but it focuses more directly on providing a vision of the town's parks and open space system through the year 2030. It evaluates current parks, open spaces, and trails and the need for additional parks, open space, and trails.

• Town of Neenah (Winnebago County)

- Town of Neenah Comprehensive Plan, 2009-2029, adopted May 26, 2009. The goals of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning are to "Continue to maintain the town's diverse character, ranging from rural to urban, through the preservation of agriculture and environmental areas and minimization of land use conflict." and "Conserve, protect, and enhance the natural resources and environmentally sensitive areas in the town."
- Town of Neenah Open Space and Recreation Facilities Plan, 2009-2014, adopted October 2009.⁸⁸ The report describes existing conditions, projects future growth and makes recommendations to guide the recreational needs of the residents of the village.

• Town of Vandenbroek (Outagamie County)

Town of Vandenbroek Comprehensive Plan 2008-2028, adopted October 15, 2008. The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning is to "Conserve, protect and improve the environmental and cultural resources of the town".

Town of Vinland (Winnebago County)

- Town of Vinland Comprehensive Plan, 2007-2026, adopted February 12, 2007.⁸⁹ The goal of the Agricultural, Natural and Cultural Resources chapter, pertaining to transportation planning, is to "Protect the productive agricultural lands in the town for long term farm use, and maintain agriculture as a major economic activity and way of life" and "Conserve, protect and enhance the natural resources and environmentally sensitive areas that exist in the town".
- Town of Woodville (Calumet County)
 - o Town of Woodville Comprehensive Plan adopted September 5, 2007.

ENVIRONMENTAL FEATURES

For each of the environmental feature there is a short narrative summarizing the data, limitations, an overview of the mitigation issues and system level mitigation measures. Buffers of one quarter mile are shown for improve/expand and new projects, while buffers of 250 feet are shown for bridge projects. It is assumed that potential impacts which must be mitigated for bridges are point specific. Longer corridor construction projects are usually linear and would therefore have broader potential impacts to be mitigated and may impact one or more environmental feature. Environmental features have been divided into: Climate Change; Geographic and Topography; Geologic Features; Water Resources; Wildlife Resources; Parks, Open Space, and Recreational Resources: Air Quality; and Cultural Resources.

This report presents material at a high system level view, therefore maps and information in this chapter should be used with extreme caution and may not, except at the most generalized level be valid for looking at specific project impacts and offsets without detail project engineering design and field reviews as part of the project level analysis and permit process.

According the GIS features analysis should stand as is and represents a good faith effort to permit a system level view, as required by the planning regulations but should not be used to identify specific impacts or offsets best left to the project level review and permit process. Still maps are illustrative and may be useful by road agency, resource and permit agencies in looking at overall systemic impacts which can further refine over time and in the local level review and permit process.

⁸⁹ ftp://ftp.wi.gov/DOA/public/comprehensiveplans/V13_Vinland_T_CompPlan.pdf.

Climate Change/Long-Term Weather Patterns

In Wisconsin, weather patterns could potentially magnify existing climate related risks to people, ecosystems and infrastructure. As a result, damage to transportation infrastructure may occur through temperature extremes and more severe storm events. Temperature variability can cause pavement to soften, expand and contract; resulting in buckling, rutting and potholes; all issues that the MPO should consider for infrastructure related transportation planning purposes.

Extreme rainfall events and flooding will require sound planning and preparation. ⁹⁰ Heavy rains may result in flooding, which could disrupt traffic, delay construction activities, and weaken or wash out the soil and culverts that support roads, tunnels, and bridges. ^{91,92} Life expectancy on roads and highways exposed to flooding and extreme snow could be shortened. Since water and snow may cause damage, this could result in more frequent maintenance, repairs, and rebuilding.

Weather extremes can also impact vehicles, railroads and air transportation. Vehicles can overheat and tires can to deteriorate more quickly. High temperatures can cause rail tracks to expand and buckle, resulting in more track repairs or speed restrictions to avoid derailment. Heavy rains can flood railroads, washout track sections and leave debris on railways. Storm events locally or elsewhere can also cause airport closures. Temperature variability can cause pavement to expand and contract; resulting in buckling, rutting and potholes. Storm events can cause flooding and damage airport facilities, including airstrips.

Geographic and Topography (Scenic Resources)

Calumet, Outagamie and Winnebago County's topography is a mix of two physiographic landscapes⁹³: the Southeast Glacial Plains⁹⁴ and the Central Lake Michigan Costal⁹⁵ landscapes. The topography is generally rolling where the surface is underlain by ground moraine, variable over areas of outwash, and nearly level where lacustrine deposits are present. Northern Calumet and Outagamie County's important soils include clays, loams, sands, and gravels and Winnebago County's include soils that are lime-rich tills overlain in most areas by a silt-loam loess cap.

Steep Slopes

Soil data from the NRCS-USDA Web Soil Survey (WSS), accessed 2013, was used to indicate areas that have slopes in excess of 12 percent. Since it is not practical to show each small scattered bit of soil, the map reflects what the dominant or recognized soil phases are.

Maps 16-1, Insets A - H indicate areas that have slopes in excess of 12 percent. Steep slopes within the Appleton (Fox Cities) TMA are found along the Fox River and other waterways, associated with the Niagara Escarpment, and in the northern portion of the TMA. These areas provide a natural habitat for wildlife, as well as offer recreational opportunities for hiking and

 $^{^{90} \, \}underline{\text{http://www.epa.gov/climatechange/impacts-adaptation/transportation.html\#ref1}}.$

⁹³ http://dnr.wi.gov/topic/landscapes/documents/StateMaps/Map S1 ELs.pdf.

http://dnr.wi.gov/topic/landscapes/index.asp?mode=detail&Landscape=9.

⁹⁵ http://dnr.wi.gov/topic/landscapes/index.asp?mode=detail&Landscape=8.

wildlife observation. Approximately 1.7 percent (2,987 acres) of the Appleton (Fox Cities) TMA is classified as having slopes in excess of 12 percent; of which about 2.7 percent (461 acres) of total MPO acres are with the quarter mile and 250 foot project buffer zones.

Mitigation Issues and System Level Mitigation Measures:

Slopes in excess of 12 percent are subject to erosion. Disturbing these areas should be minimized and special care should be taken to reestablish these slopes and minimize erosion. Areas disturbed by construction activities should be stabilized and vegetated as soon as final grading has been completed. Temporary erosion control measures should be implemented and maintained during construction until permanent soil erosion and sedimentation controls are in place. Potential projects within proximity to steep slopes (>12%) within the TMA include:

- Project 1: STH 55 / Lawe St USH 41, Reconstruction
- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 4: Province Terrace Trail
- Project 6: STH 15, Greenville New London, Reconstruction, Expansion, R/R Crossings
- Project 8: USH 41/Appleton Green Bay CTH J- Orange Lane, Resurfacing
- Project 9: I-41 Conversion / State Line Green Bay, SCL Dodge Co I-43 Signing
- Project 10: French Road / STH 96 CTH OO, Reconstruction
- Project 16: Northshore Ext. of Friendship Trail, Friendship State Trail
- Project 18: Little Chute Canal Bridge, Ped/Bike over Little Chute Lock
- Project 24: Lawe St / Power Canal Bridge
- Project 25: Prospect Ave / Jackman St Overhead
- Project 26: Delanglade St / CN RR Xing, RR Signals, Reconstruction
- Project 27: Delanglade St / CN RR Xing, RR Surface Reconstruction
- Project 29: Oneida St / Valley Rd Skyline Bridge, Reconstruction
- Project 37: Casaloma/Prospect Spencer, Reconstruct to Urban, 4-Lane
- Project 44: Lincoln Ave/Wilson Vandenbroek, Extension of Lincoln Ave
- Project 45: Main Street/Vandenbroek intersection, Realignment
- Project 49: Prospect Street / CTH N Park, Reconstruction
- Project 50: Kimberly Trail / CE Trail Railroad, Bike / Ped Trail
- Project 55: CTH CB Trail connection to FR Mall, CTH CB & CTH BB to Arrowhead
- Project 66: Veteran's Lift Bridge, Reconstruction

- Project 86: STH 441, USH 41 USH 41, Fox River Bridge, City of Appleton
- Project 88: USH 41 Hwy Rehab
- Project 93: STH 55 / STH 114 CTH M, V of Sherwood
- Project 94: STH 114 / USH 10 S. Junction STH 55, Menasha Hilbert
- Project 95: W Spencer St / Mayflower Casaloma, Reconstruction

Niagara Escarpment

The Niagara Escarpment or the Ledge, as it is commonly referred to. is one of the most significant geologic and topologic features in eastern Wisconsin (Map 16-1), Inset H. 96 lt stretches in a wide arc from eastern Wisconsin through Michigan's Upper Peninsula, across Ontario, Canada, and on past the Niagara Falls in New York. Within the Appleton (Fox Cities) TMA, exposed areas of the Niagara Escarpment are located along the Upper Fox River and Lower Fox River GMU's (see Watersheds and Drainage below). Within the state the feature dips beneath the surface in the southern part of the state and is not visible. Due to its unique characteristics, a large number of resource issues are associated with the escarpment. The escarpment is an important source for groundwater recharge, however due to the fractured nature of the bedrock and the thin layer of soil covering this resource, groundwater is very susceptible to contamination. It is also home to over 240 different rare, threatened, or endangered plant and animal species.⁹⁷

Mitigation Issues and System Level Mitigation Measures:

The Niagara Escarpment is a unique and sensitive resource. Due to the thin soil layer and fractured bedrock, potential groundwater impacts should be considered during planning, design, construction and maintenance of transportation projects. Transportation projects can impact groundwater when materials such as paint, solvent, fuel, etc. enter areas that provide direct links to the groundwater system such as the area known as the Niagara Escarpment. The escarpment is also home to over 240 different rare, threatened, or endangered plants and animal species

Projects impacting the Niagara Escarpment should integrate stormwater management into the design of the site. Stormwater management systems should be designed to protect area groundwater supplies, such as draining away from these areas. Parking or storing equipment in areas of potential groundwater contamination should be prohibited. All hazardous materials should be properly handled, stored and disposed of properly. If possible construction should utilize less hazardous materials when possible. Keep equipment in good working order and leak free. Avoid hosing down equipment on site.

Potential projects in the vicinity of the Niagara Escarpment (within the TMA) include:

- Project 93: STH 55 / STH 114 CTH M, V of Sherwood
- Project 94: STH 114 / USH 10 S. Junction STH 55, Menasha Hilbert

Geologic Features and Farmland Resources

Metallic and Non-Metallic Mineral Resources

No active metallic mining activities occur within the Appleton (Fox Cities) TMA as metallic minerals are not present. The bedrock geology of the TMA does, however lend itself to the production of building and crushed stone. Extensive glacial activity is also responsible for

⁹⁶ The graphic source data depicted on Map 7-1 (and corresponding insets) includes: Escarpment Outcrop – J. Kluessendorf/D. Mikulic, 2000. Location digitized by Bay Lake Regional Planning Commission.

97 The Niagara Escarpment, Inventory Findings 1999-2001 and Considerations for Management, Final Report MAY 1,

^{2002.}

providing sand and gravel, which is mainly found in outwash formations, suitability for sand and gravel (five acres or more) and areas of high bedrock.

Soil Suitability for Sand and Gravel

Soil suitability for road materials (sand and gravel) is shown on **Map 16-1, Insets A-D and F**. This information can be used as guidance as to where to look for probable sources and are based on the probability that soils in a given area contain sizeable quantities of sand or gravel. These materials can be used as a source for roadfill and embankments. Soils suitable for gravel and sand (5 acres or more) are present within a band that runs diagonally from the Town of Neenah northeast to the Town of Freedom. Other locations include the area parallel to the Fox River and USH 41 from Kaukauna to Wrightstown, and near Lake Winnebago. About 1.2 percent (2,139 acres) of soils are suitable for gravel (0.3%, 460 acres) and sand (1.0%, 1,679 acres); of which 0.1 percent (160 acres) and 0.18 percent (317 acres) are within the quarter mile and 250 foot project buffer zones for gravel and sand, respectively.

Existing Non-Metallic Quarry Sites

Non-metallic mineral resources include all mined minerals other than those mined as source of metal. Economically important non-metallic minerals include stone, sand and gravel. Non-metallic Quarry Sites within the Appleton (Fox Cities) TMA was last updated by ECWRPC in 2014, based on permit data. **Map 16-1**, **Insets A – D, F - H** and **Table 16-1** indicate existing non-metallic quarry locations for clay, gravel, limestone, sand and sand and gravel. Limestone quarries are the most prevalent (11 out of 18) and can be found in the City of Kaukauna, Village of Harrison and Sherwood and the towns of Neenah, Clayton, Ellington and Center.

Table 16-1: Non-Metallic Quarry Sites

Material	Limestone	Sand/Gravel	Sand	Clay	Gravel	Total
Number	11	3	1	3	0	18

Source: ECWRPC, 2014

Bedrock

Bedrock geology for the Appleton (Fox Cities) TMA is made up of the Sinnipee Group that is comprised of dolomite with some limestone and shale; Maquoketa Formation comprised of shale and dolomite; the St. Peter Formation comprised of sandstone with some limestone, shale and conglomerate; and the Prairie du Chien Group comprised of dolomite with some sandstone and shale. These rocks were formed during the Ordovician Period during which Wisconsin was submerged at least three times. Animals and plants living in the seas deposited layers and reefs of calcium carbonate which are now dolomite.

At one time, glaciers covered what is now the Appleton (Fox Cities) TMA, modifying the land surface by carving and gouging out soft bedrock, smoothing off hilltops, filling valleys and leaving a deposit of debris over the land. Areas of high bedrock (5 acres or more) within the Appleton (Fox Cities) TMA are shown on **Map 16-1**, **Insets A – D**, **F - H**. These areas are essentially located near and west of USH 41 in the Neenah/Menasha area; north of USH 41 in the Town of Center; west of Lake Winnebago and east of USH 41 in the Neenah area; and east of Lake Winnebago near the Village of Sherwood. Approximately 1.5 percent (2,570 acres) has

⁹⁸ Bedrock Geology of Wisconsin, UW-Extension Geological and Natural History Survey, April 1981, revised 2005.

areas of high bedrock that are five acres or more in size within the TMA; of which approximately 4 percent (715 acres) are within the quarter mile and 250 foot project buffer zones.

Mitigation Issues and System Level Mitigation Measures:

While high bedrock can result in higher construction costs, it also may be used as building materials for road construction. Projects within one quarter mile of high bedrock (5 or more Acres) areas include:

- Project 15: CTH II STH 441 (Oshkosh-Appleton), Resurface
- Project 17: CTH O, WCL Crossing Signals & Gates
- Project 55: CTH CB Trail connection to FR Mall, CTH CB & CTH BB to Arrowhead
- Project 56: Cold Spring/East Shady CTH BB, Reconstruction
- Project 57: Cold Spring/Jacobsen American, Resurface
- Project 58: East Shady/CTH CB Cold Spring, Reconstruction

- Project 80: CTH G/CTH A WIS 76, Reconstruction, Urban
- Project 85: STH 96 / Washington Claribel, Reconstruct

Farmland Resources

According to the Census of Agriculture⁹⁹, there were 719 farms in Calumet County, 1,170 farms in Outagamie County and 1,117 farms in Winnebago County. Since 2007, the number of farms has decreased in Calumet and Outagamie County and increased in Winnebago County. The average size of a farm decreased in Calumet County (from 207 to 198 acres) and Winnebago County (from 164 to 139 acres), but increased in Outagamie County (from 182 to 214 acres) during this time period.

Prime farmland are generally defined as "land that has the best combination of physical and chemical characteristics for producing food, feed, forage, fiber, and oilseed crops and that is available for these uses. It has the combination of soil properties, growing season, and moisture supply needed to produce sustained high yields of crops in an economic manner if it is treated and managed according to acceptable farming methods". This includes the following classifications (1) All areas are prime farmland; (2) Prime Farmland, if drained; (3) Prime farmland if protected from flooding or not frequently flooded during the growing season, and (4) Prime farmland if drained and either protected from flooding or not frequently flooded during the

⁹⁹ Census of Agriculture, 2012 for Calumet, Outagamie and Winnebago counties. US Department of Agriculture, www.agcensus.usda.gov.

¹⁰⁰ United States Department of Agriculture, Natural Resource Conservation. NSSH Part 622 I NRCS. Service http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/survey/?cid=nrcs142p2 054226.

growing season.¹⁰¹ Soil data from the NRCS-USDA Web Soil Survey (WSS), accessed in 2013, was used to determine prime farmland.

Soils suitable for farmland are shown on Map 16-1, Insets A-H. Almost all the projects within the Appleton (Fox Cities) TMA either cross, are in proximity to, or go through prime farmland, thus a visual inspection of each site for agricultural activity should be considered in relation to projects. However, within the incorporated communities of Appleton, Neenah, Menasha, Kimberly, Little Chute, Combined Locks and Kaukauna; prime farmland soils for its use as farmland are not a priority. Likewise, land designated in other areas for proposed developed uses such as residential, commercial, industrial, public/institutional, mixed use on Map 4-2, Future Land Use 2050 is not a priority for protection. Therefore for mitigation purposes, this report will only highlight areas within the towns, where farmland preservation is more important and where future land use allows agricultural uses. Approximately 83.3 percent (142,699 acres) are considered prime farmland with the TMA; of which about 22 percent (38,267 acres) of total MPO acres are within the quarter mile and 250 foot project buffer zones.

Mitigation Issues and System Level Mitigation Measures:

Wisconsin is rooted in agriculture and has a long history of supporting farming in the state. Legislation that has protected farming include the Wisconsin's "Right-to-Farm Law", Wisconsin Statutes 823.08 (protects farming from nuisance complaints), to its more recent "Working Lands Initiative" that among other things encourages counties to develop updated farmland preservation plans and have them certified by the state for farmland preservation. As a result, a number of counties in the state, including Calumet, Outagamie and Winnebago counties have updated their farmland preservation plans in the last four years.

Transportation projects should consider farmland preservation and impacts during planning, design, construction and maintenance of transportation projects within these areas. Access to farmland areas is necessary for farmers to plant, harvest and maintain their crops and properly care for their animals. Dust, noise, soil compaction and other aspects of construction may interfere with farming activities. Transportation projects may fragment parcels of land, damage agricultural drainage, remove windbreaks and alter existing access points, making it harder to permanently access fields or maintain viability. Mitigation measures include maintaining access, limiting land acquisitions, avoiding the removal of windbreaks where possible, install necessary culverts to not impede the movement of water and not impact existing drainage lines. Several projects within the Appleton (Fox Cities) TMA are in proximity to an existing farming operation. These projects include:

- Project 1: STH 55 / Lawe St USH 41, Reconstruction
- Project 6: STH 15, Greenville New London, Reconstruction, Expansion, R/R Crossings
- Project 8: USH 41/Appleton Green Bay CTH J- Orange Lane, Resurfacing
- Project 9: I-41 Conversion / State Line Green Bay, SCL Dodge Co I-43 Signing
- Project 11: CTH LP / USH 10 CTH A, Reconstruction
- Project 46: Evergreen / French Holland, Reconstruction
- Project 47: Evergreen / Holland CTH N, Reconstruction

¹⁰¹ Prime farmland also includes areas that are irrigated. However, within Fond du Lac County this classification does not exist and was therefore omitted from the text.

Comments received from WI Dept. of Agriculture, Trade and Consumer Protection, 4/3/15.

Water Resources

Water resources are sources of water that are useful or potentially useful to humans. Water is needed for life to exist and is used for household, agricultural, recreational, industrial and environmental activities. There are numerous pressures facing our water resources, such as invasive species, beach closures due to pollution, sewer overflows, wetland loss, stormwater runoff, drought, floods, increasing water demands by residential, agricultural, recreation and industrial activities, climate change, and potential ground and surface water contamination due to pesticides, chemicals, and natural occurring minerals. In addition, it is important to consider the impacts of development on storm water flow; individual projects can and often do impact people and environmental resources in a watershed. Water resource data such as; watershed boundaries, lake, pond, river, and stream data was obtained from the WDNR. Wetland data was provided by the WDNR in 2012, while floodplain data was FEMA in 2012.

Watershed, lakes, ponds, river, stream data was obtained from the WDNR. Wetland data was provided by the WDNR in 2012, floodplain data was FEMA certified in 2012. Wetland mitigation areas were obtained from WisDOT.

Groundwater

An aquifer is a rock or soil layer capable of storing, transmitting and producing potable water for human consumption. In the Calumet, Outagamie and Winnebago Counties there are several aquifers; the *sandstone aquifer* is the source of the most potable water and is used by many of the major cities within the three counties. The *Platteville-galena aquifer* is composed primarily of dolomite and provides adequate water to private wells. The *Silurian or Niagara dolomite aquifer* is a source of potable water and is in high demand because of the quantity and quality and is moderately susceptible to contamination. *Sand and gravel aquifer* consists of permeable sediments of unconsolidated glacial deposits and is the most susceptible to contamination. Many residents within the TMA rely on surface water as a source of drinking water. Residents of the City of Appleton and communities that purchase water from the city obtain treated water for drinking from Lake Winnebago. Communities within the TMA, purchasing potable water from Appleton include the Village of Sherwood, Waverly Sanitary District 107, and the Town of Grand Chute. Residents from the City of Menasha and Neenah also rely on surface water as a source of drinking water (Lake Winnebago and the Fox River). The Town of Menasha purchases drinking water from the City of Menasha. Residents within the rest of the TMA rely on

¹⁰⁴ Wikipedia, http://en.wikepedia.org/wiki/Water resources, 2014.

Comments received from Wisconsin Department of Natural Resources, 3/31/15

Calumet Inventory and Trends Report, 2007 & Winnebago County Comprehensive Plan, 2006.

¹⁰⁷ Waverly Sanitary District includes parts of the cities of Appleton and Menasha and the Town of Harrison.

groundwater as a source of drinking water. Communities with municipal wells include the towns of Menasha, Greenville, the City of Kaukauna and the villages of Kimberly, Little Chute and Sherwood and the Darboy Sanitary District ¹⁰⁸. The Village of Combined Locks and the Darboy Sanitary District purchase water from the Village of Kimberly. Residents within the TMA, living outside of the areas described above rely on private wells as a source of drinking water. Groundwater is obtained from both shallow and deep wells and aquifers. Shallow wells and aquifers are more susceptible to contamination than deeper ones.

Groundwater Contamination Susceptibility

The ease that pollutants can be transported from the land surface to the top of the groundwater or "water table" defines a groundwater's susceptibility to pollutants. 109 Materials that lie above groundwater offer protection from contaminants. However, the amount of protection offered by the overlying materials varies, depending on the materials. In order to identify areas sensitive to contamination, the WDNR, in cooperation with UW-Extension, Wisconsin Geological and Natural History Survey and the USGS, evaluated the physical resource characteristics that influence this sensitivity. Five resource characteristics were identified: depth to bedrock; type of bedrock; soil characteristics; depth to water table; and characteristics of surficial deposits. Each of the five resource characteristics was mapped, and a composite map was created. A numeric rating scale was developed and map scores were added together.

An index method was used to determine susceptibility; however this method of analysis is subjective and includes little quantifiable or statistical information on uncertainty. This limits the use of the information for defensible decision making. Therefore, while groundwater contamination susceptibility maps can be useful, this level of uncertainty must be kept in mind.

According to the groundwater contamination susceptibility map, a majority of the Appleton (Fox Cities) TMA is less susceptible to contamination. Areas more susceptible to groundwater contamination are located around high bedrock areas (Map 16-2).

Mitigation Issues and System Level Mitigation Measures:

Potential groundwater impacts should be considered during planning, design, construction and maintenance of transportation projects within areas of higher susceptibility to groundwater contamination. Transportation projects can impact groundwater when materials such as paint, solvent, fuel, etc. enter areas that provide direct links to the groundwater system.

Projects within areas of higher potential for groundwater contamination should integrate stormwater management into the design of the site. Stormwater Best Management Practices (BMPs) should be implemented to protect area groundwater supplies, such as draining away from these areas. Parking or storing equipment in areas of potential groundwater contamination should be prohibited. All hazardous materials should be properly handled, stored and properly disposed. If possible construction should utilize less hazardous materials when possible. Equipment should be kept in good working order and leak free. Avoid hosing down equipment on site.

¹⁰⁸ Darboy Sanitary District included portions of the towns of Buchanan (Outagamie County) and Harrison (Calumet County).

http://wi.water.usgs.gov/gwcomp/find/fonddulac/index_full.html. Protecting Wisconsin's Groundwater Through Comprehensive Planning.

New or wider roadways increase the amount of impervious surface. Therefore groundwater mitigation measures should include permanent stormwater management systems. Stormwater runoff can contain chemicals from leaking vehicles, road salt and other pollutants that can enter the groundwater system.

According to the groundwater contamination susceptibility map, the following transportation projects are in areas more susceptible to groundwater contamination: (See **Map 16-2**).

- Project 1: STH 55 / Lawe St. USH 41, Reconstruction
- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion

- Project 90: USH 41 / USH 10 USH 41, Resurface

Groundwater Quality

The quality of groundwater used for domestic purposes within East Central Wisconsin is relatively good, although specific locations may have localized problems due to geologic or aquifer characteristics. A portion of the Appleton (Fox Cities) TMA has been identified as an "Arsenic Advisory Area" by the WDNR¹¹⁰ (Figure 7-1). This area coincides with the sub-crop of the St. Peter Sandstone and has one of the primary sulfide mineral bearing zones lying just below the glacial sediments. These sulfides breakdown when exposed to oxygen to create arsenic. Ingested arsenic is a known cause of cancer, including cancer of the skin, lungs, bladder and kidneys.

Wellhead Protection Areas

Fifteen¹¹¹ out of thirty-four municipalities within Calumet, Outagamie and Winnebago counties have wellhead protection plans. Seven of these municipalities have a wellhead protection ordinance. **Table 16-2** displays the municipalities that have wellhead protection plans and or wellhead protection ordinances. Wellhead protection plans are developed to achieve groundwater pollution prevention measures within public water supply wellhead areas. A wellhead protection plan can be all of or part of the well recharge area. The well recharge area

¹¹⁰ Milestone Report #1, State of the Region, East Central Wisconsin Regional Comprehensive Plan 2030, adopted April 2003.

¹¹¹ While the Village of Wrightstown is mostly located in Brown County, in recent years it has expanded into Outagamie County.

is the entire area of land that allows water and other fluids to flow into the subsurface and move toward the well. According to the WDNR website¹¹² the Town of Greenville and the villages of Little Chute, Sherwood and Wrightstown and the Darboy Joint and Freedom sanitary districts have wellhead protection plans within the Appleton (Fox Cities) TMA.

Table 16-2: Municipalities with Wellhead Protection Plan and/or Ordinances

Municipality/Jurisdiction	Protection Plan	Ordinance				
Calumet County						
Sherwood*	Х	Х				
Outagamie County						
Darboy Joint Sanitary District*	Х	Х				
Freedom Sanitary District*	X					
Greenville Sanitary District/Town*	Х	Х				
Little Chute*	X	Х				
Wrightstown**	X					
*Municipality is part of the TMA.						
**Municipality is partially within Outagamie County and the TMA						

^{**}Municipality is partially within Outagamie County and the TMA.

Mitigation Issues and System Level Mitigation Measures:

Wells provide direct links to the groundwater system. Additionally pollutants on the land can seep into the ground and move towards municipal wells. Potential impacts to wellhead protection areas should be considered during planning, design, construction and maintenance of transportation projects. If a wellhead protection area is impacted, specific measures to protect the wellhead will depend on the depth to bedrock; type of bedrock; soil characteristics; depth to water table; and characteristics of surficial deposits. At a minimum, care should be taken to direct stormwater runoff away from these areas.

Watersheds and Drainage

The WDNR has divided the state into three major river basins; the Appleton (Fox Cities) TMA is contained entirely within the Lake Michigan Basin. Each major river basin is further broken down into 24 hydrologically based Water Management Units (WMUs). The Appleton (Fox Cities) TMA is part of the Lower Fox River, Upper Fox River and the Wolf River WMUs or basins (Map 16-3, Insets A-H). Geographic Management Units (GMUs) are similar to WMU but differ because they incorporate county boundaries and are not entirely hydrologically based. The Appleton (Fox Cities) TMA is part of the Lower Fox River, Upper Fox River and Wolf River GMUs. GMUs are further divided into smaller units based on smaller sub-watersheds. The Wisconsin DNR has completed several reports analyzing water quality for designated GMUs.

The Lower Fox River Basin encompasses about 638 square miles and is made up of six subwatersheds; five of which are found with the TMA: Apple, Ashwaubenon Creek sub-watershed (LF02); Plum and Kankapot Creeks Sub-watershed (LF03); The Fox River - Appleton Subwatershed (LF04), Duck Creek sub-watershed (LF05), and Little Lake Butte Des Morts Subwatershed (LF06).

¹¹² <u>List Of Communities In Wisconsin With Wellhead Protection Plans (Updated July 8, 2008)</u>. http://www.dnr.state.wi.us/org/water/dwg/gw/whp/communities.pdf.

http://dnr.wi.gov/water/watershedsearch.aspx, 2014.

WDNR. State of the Basin Reports. http://dnr.wi.gov/water/basin/.

- Duck Creek Sub-watershed is located in the northwestern portion of the Lower Fox River Basin. Only the very southern tip of the watershed, which covers 152 square miles, enters the Appleton (Fox Cities) TMA. Overall water quality and stream habitat is rated poor to fair, with documented problems of sedimentation, phosphorus, filamentous algae. Sedimentation and phosphorus from upland agricultural fields are the major sources of nonpoint pollution in the watershed. Upland areas account for well over 80 percent of the overall load.
- The Apple and Ashwaubenon Creek Sub-watershed is located east of STH 47. Its southern boundary can be found on the south side of USH 41 and includes about 113 acres. Land use in the watershed is primarily agriculture and residential. Sediment and phosphorus loading from upland agricultural fields are the major sources of nonpoint pollution within the watershed. It was selected as a Priority Watershed Project in 1986 based on three criteria: the severity of the water quality problems; the seriousness of the nonpoint sources; and the capacity and willingness of the local units of government and agencies to carry out the project.
- The Plum and Kankapot Creek Sub-watershed is situated on the south side of the Fox River and includes part of the cities of Appleton and Kaukauna as well as the villages of Kimberly and Combined Locks. This sub-watershed covers about 84 square miles. Historical data indicates water quality problems in the sub-watershed. Nonpoint pollution from cropland erosion, barnyard runoff and poor land practices contribute to problems with low dissolved oxygen, high nutrient levels and sediment.
- The Fox River Appleton Sub-watershed is located north of the Plum Creek and Little Lake Butte Des Morts Sub-watersheds and south of the Apple and Ashwaubenon Creeks Sub-watersheds. It extends from east of the City of Kaukauna and west to USH 45. This narrow sub-watershed encompasses 39 square miles. This watershed is predominately an urbanized area with a large amount of impervious surfaces that contribute to urban storm runoff.
- The Little Lake Butte Des Morts Sub-watershed contains about 44 square miles and is located almost entirely within Winnebago County. It includes the cities of Neenah and Menasha and the southern end of the City of Appleton. This watershed was added to the Lower Fox River Basin in 1995, when the basin and watershed boundaries of the Upper and Lower Fox River Basins were revised. A very small portion of this Sub-watershed is part of the Oshkosh MPO.

The Upper Fox River Basin occupies a total of 2,090 square miles and is broken down into 15 sub-watersheds. Three of the sub-watersheds are part of the Appleton (Fox Cities) TMA. These include the Lake Winnebago and North and West (UF01), the Lake Winnebago - East (UF02) and the Lake Butte des Morts (UF04) sub-watersheds.¹¹⁵

 The Lake Winnebago North and West Sub-watershed is located along the west and north shore of Lake Winnebago from Oshkosh to just west of High Cliff State Park. It includes portions of the Cities of Oshkosh, Neenah, and Menasha. The watershed has approximately 15 miles of frontage on Lake Winnebago. This watershed is a major contributor of phosphorus and suspended solids and was ranked "high" for streams.

http://dnr.wi.gov/water/basin/upfox/, Accessed 10/7/2014.

- The Lake Winnebago East Sub-watershed extends along the east shore of Lake Winnebago in Calumet and Fond du Lac Counties. This watershed was selected as a nonpoint source priority watershed project in 1989.
- Lake Butte des Morts Sub-watershed lies in east central Winnebago County. The very northern tip of the sub-watershed is included in the Appleton (Fox Cities) TMA. Agriculture is the primary land use, but there is a very sizable urban area in the watershed. The Lake Butte des Morts Watershed is ranked "high" for nonpoint source issues affecting streams and groundwater.

The Wolf River Basin drains 3,690 square miles and is divided into 20 sub-watersheds. Two of these sub-watersheds: Arrowhead River and Daggets Creek (WR01) and Wolf River New London and Bear Creek (WR12) sub-watersheds are found within the Appleton (Fox Cities) TMA.

- Arrowhead River and Daggets Creek Sub-watershed skims along the western edge of the TMA. The watershed ranked high priority for streams and low for groundwater under the Wisconsin Nonpoint Source Water Pollution Abatement Program priority watershed section process. Watershed problems include excessive vegetation, dissolved oxygen, and soil loss.
- Wolf River New London and Bear Creek Sub-watershed is found within the northwestern corner of the TMA and covers about 145 square miles. The watershed ranked medium for streams and low for groundwater under the NPS Priority Watershed section process.

Mitigation Issues and System Level Mitigation Measures:

Water resources are considered impacted if (1) polluted stormwater runoff reaches lakes, ponds, rivers and streams; (2) area vegetation is removed; (3) there is damage to stream beds or banks caused by heavy equipment; or (4) accidental spills such as paint, salt, solvent, etc. that run directly into bodies of water. Therefore, surface water impacts should be considered during planning, design, construction and maintenance of transportation projects.

If it is determined that a water resource could be impacted by the project, if possible, steps should be taken to avoid impacts to these resources. If however, impacts are unavoidable, then a course of action should be established to minimize these impacts. Stormwater management should be incorporated into the site design, low impact development practices should be utilized that help infiltrate stormwater into the ground, instead of diverting stormwater directly to the water resource. Special requirements should be incorporated that address water resource sensitivity into the plans and specifications. Erosion control practices should be implemented to capture sediments and control runoff before site disturbance occurs. Specific projects that may potentially impact lakes, ponds, marshes, rivers, streams, wetlands and floodplains are discussed below under mitigation issues and system level mitigation measures.

http://dnr.wi.gov/water/basin/wolf/, Accessed 10/7/2014.

Lakes and Ponds

Natural lakes in Wisconsin are categorized by the source of their water supply. The four types of natural lakes are: drainage lakes, seepage lakes, spring lakes and drained lakes. ¹¹⁷

- Drainage lakes have both an inlet and outlet whose main water source is stream drainage. Most major rivers in Wisconsin have drainage lakes along their course.
 Drainage lakes owe one-half of their maximum depth to a dam and are considered to be artificial lakes or impoundments.
- Seepage lakes do not have an inlet or an outlet, and only occasionally overflow. As landlocked water bodies, the principal source of water is precipitation or runoff, supplemented by groundwater from the immediate drainage area. Since seepage lakes commonly reflect groundwater levels and rainfall patterns, water levels may fluctuate seasonally. Seepage lakes are the most common lake type in Wisconsin.
- **Spring lakes** have no inlet, but do have an outlet. The primary source of water for spring lakes is groundwater flowing into the bottom of the lake from inside and outside the immediate surface drainage area.
- **Drained lakes** have no inlet, but like spring lakes, have a continuously flowing outlet. Drained lakes are not groundwater-fed. Their primary source of water is from precipitation and direct drainage from the surrounding land. Drained lakes are the least common lake type found in Wisconsin.

Three lakes/quarries are found within the Appleton (Fox Cities) TMA; Lake Winnebago, Little Lake Butte des Morts and Lous Quarry **Map 16-3**).

- Lake Winnebago, a drainage lake, is the largest inland lake in Wisconsin; it has a maximum depth of 21 feet and covers about 137,708 acres. It also has the largest volume (696 billion gallons) and the longest shoreline (85 miles) than any lake in Wisconsin. Lake Winnebago is part of the Winnebago Pool Lakes, composed of Lakes Winnebago, Butte des Morts, Winneconne, and Poygan that drain 16,654 square kilometers and compose 17% of Wisconsin's surface water area. Lake Winnebago is classified as impaired and receives large volumes of sediment and nutrient loading.
- Lake Butte des Morts, a drainage lake, has a maximum of 9 feet and encompasses an area of 8,569 acres. It is part of the Winnebago Pool Lakes and is fed by the Fox River (Southwest corner) and the Wolf River (Southeast corner). It drains via the Fox River through the City of Oshkosh into Lake Winnebago.
- Lous Quarry has a maximum depth of 18 feet and a surface area of 2 acres. It is located in T. 20 N., R. 17 E., Section 4 in the Town of Menasha.

¹¹⁷ Wisconsin Lakes; www.wisconsinlakes.org.

¹¹⁸ WDNR: http://dnr.wi.gov/water/waterDetail.aspx?key=358400.

Mitigation Issues and System Level Mitigation Measures:

Protection of lakes and ponds require mitigation measures that are centered around sound construction management practices and permitting. Project level reviews should include, but are not limited to proper permits, soil erosion protections, control and limitation of pollutants, vegetation buffers and sedimentation control measures.

Projects that are in the vicinity of lakes, ponds, and/or wetlands within the Fox Cites TMA include:

- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 4: Province Terrace Trail
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion
- Project 9: I-41 Conversation / State Line Green Bay, SCL Dodge Co. I-43 Signing
- Project 11: CTH LP / USH 10 CTH A, Reconstruction
- Project 14: Broad Street / Tayco Racine, Reconstruction
- Project 15: CTH II STH 441 (Oshkosh-Appleton), Resurface
- Project 16: Northshore Ext. of Friendship Trail
- Project 19: 3rd Street, City of Menasha, Lake Winnebago Slough & Approach

- Project 91: Racine St. Bridge, C. of Menasha
- Project 92: USH 10 Waupaca Menasha NCL STH 441

Rivers and Streams

There are thirteen named rivers and streams within the Appleton (Fox Cities) TMA (**Map 16-3**, **Insets A-H**).

• Lower Fox River (Fox River – Appleton) is part of northeast Wisconsin's Fox-Wolf River system. The Fox River is the largest tributary to Lake Michigan. It drains approximately 601 square miles and flows 39 miles north from Lake Winnebago to its mouth in Green Bay, which discharges into the Bay of Green Bay. Twelve locks and 17 dams harness the Lower Fox River that falls about 168 feet and flows through the cities of Appleton, Menasha and Kaukauna and the villages of Little Chute, Kimberly, Combined Locks. The Fox River Navigational System Authority oversees the operation, repair, and maintenance of the Fox Locks. The Lower Fox River has poor water quality conditions.

Urban runoff and agricultural runoff contribute excessive amounts of sediment and nutrient loading.

- Arrowhead River (Arrowhead River and Daggots Creek Sub-Watershed). The
 Arrowhead River is tributary to the east shore of Lake Winneconne. The Winnebago
 Comprehensive Management Plan (WCMP) rated an 8.2 mile priority strip along the
 Arrowhead River as high priority for NPS pollution abatement activities. The data
 search for the Wolf River Basin indicated problems are widespread within this
 watershed.¹¹⁹
- Goldsbrough Creek (Little Lake Butte des Morts Sub-Watershed)
- Apple Creek (Apple, Ashwaubenon Creek Sub-Watershed) is a 24-mile creek located north of USH 41. This stream is plagued by erosion and is often dry except for scattered pools.
- Duck Creek (Duck Creek Sub-Watershed) is a 42-mile creek that originates in Burma Swamp and winds northeast before it dumps into the Bay of Green Bay. Water quality is impacted by land use practices such as lack of stream buffers, livestock and cropping practices next to the streambank and ditching are common. This has resulted in turbid water, warmer water temperatures, lower dissolved oxygen levels, stream flashiness and dramatic water fluctuation including periods of ponding and no flow.
- Garners Creek (Plum Creek Sub-Watershed) is a five mile stream with low water quality
 and stream bank erosion and failure is common. It flows through the towns of Buchanan
 and Harrison and the Village of Combined Locks. The Garners Creek Stormwater Utility
 was formed to reduce flooding, enhance water quality and reduce stream bank erosion
 in 1998.
- Kankapot Creek (Plum Creek Sub-Watershed) is a nine mile stream with poor water quality. Very little fish and aquatic life habitat exists due to heavy clay substrate. Within the TMA, the Kankapot flows through the City of Kaukauna, Town of Buchanan and Town of Woodville.
- Plum Creek (Plum Creek Sub-Watershed) is a 19-mile stream with poor water quality.
 Aquatic life habitat is poor due to the clay substrate from bank erosion and upland
 sediment runoff. Aquatic life is also limited due to low stream flow during the summer
 months the TMA the creek flows through the Town of Buchanan.
- **Mud Creek** (Fox River Appleton Sub-Watershed) is an eight mile stream that originates in an urban area and continues through the southwestern portion of the City of Appleton before discharging into the Fox River. Aquatic habitat is rated poor to fair.
- Rat River (Arrowhead River and Daggets Creek Sub-Watershed) is a tributary to the Main Stem Wolf River. Extensive marsh/wetlands surround the river's shoreline.

http://dnr.wi.gov/water/waterDetail.aspx?key=10750.

- Bear Creek (Wolf River New London and Bear Creek Sub-Watershed) is an 18-mile long tributary to the Wolf River. The stream's main fishery value is as a spawning area for the Wolf River fishery.
- **Mackville Creek** (Wolf River New London and Bear Creek Sub-Watershed) runs through Bubolz Nature Preserve.
- Neenah Slough (Little Lake Butte Des Morts Sub-Watershed) can be characterized as a stream, lake and marsh. The slough is one of the major northern pike spawning areas adjacent to Little Lake Butte des Morts.

Mitigation Issues and System Level Mitigation Measures:

Most transportation projects within the Fox Cities TMA area are in the vicinity of rivers and streams and may impact the waterways. Mitigation measures to protect rivers and streams are centered around sound construction management practices and permitting. Project level reviews should include, but are not limited to proper permits, soil erosion protections, control and limitation of pollutants, vegetation buffers and sedimentation control measures. Projects that are in the vicinity of rivers, streams, creeks and unnamed tributaries within the Fox Cities TMA include:

- Project 2: STH 124 / USH 41 STH 47, Resurface
- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 5: CTH CB Bike to Work Trail
- Project 6: STH 15, Greenville New London, Reconstruction, Expansion, R/R Crossing
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion
- Project 8: USH 41 / Appleton Green Bay CTH J, Orange Lane
- Project 9: I-41 Conversation / State Line Green Bay, SCL Dodge Co. I-43 Signing
- Project 10: French Road / STH 96 CTH OO, Reconstruction
- Project 11: CTH LP / USH 10 CTH A, Reconstruction
- Project 12: Kimberly Ave. / Railroad Marcella, Reconstruction
- Project 13: Van Roy / Eisenhower CTH CE Theater Way, Reconstruction
- Project 14: Broad Street / Tayco Racine, Reconstruction
- Project 18: Little Chute Canal Bridge Ped/Bike over Little Chute Lock

- Project 82: STH 76 / STH 15 CTH JJ, Recondition
- Project 85: STH 96 / Washington Claribel, Reconstruct
- Project 86: STH 441, USH 41 USH 41, Fox River Bridge, City of Appleton
- Project 88: USH 41 Hwy Rehab
- Project 90: USH 41 / USH 10 USH 41, Resurface
- Project 91: Racine St. Bridge, C. of Menasha

Designated Trout Streams

Wisconsin trout streams are placed into three classes for fish management purposes by the Wisconsin Department of Natural Resources¹²⁰:

- Class 1. These are high quality trout waters; they have sufficient natural reproduction to sustain populations of wild trout at or near carry capacity. Consequently, streams in this category require no stocking of hatchery trout. These streams or stream sections are often small and may contain small or slow-growing trout, especially in the headwaters.
- Class 2. Streams in this classification may have some natural reproduction, but not enough to utilize available food and space. Therefore, stocking is required to maintain a desirable sport fishery. These streams have good survival and carryover of adult trout, often producing some fish larger than average size.
- Class 3. These waters are marginal trout habitat with no natural reproduction occurring. They require annual stocking of trout to provide trout fishing. Generally, there is no carryover of trout from one year to the next.

¹²⁰ Wisconsin Trout Streams, WDNR. Last revised March 28, 2014; http://dnr.wi.gov/topic/fishing/trout/streamclassification.html.

According to the WDNR, there are no designated trout streams within the Appleton (Fox Cities) TMA.

Outstanding Resource Waters or Exceptional Water Resources

Wisconsin has designated many of the state's highest quality waters as Outstanding Resource Waters (ORWs) or Exceptional Resource Waters (ERWs). Waters designated as ORW or ERW are surface waters which provide outstanding recreational opportunities, support valuable fisheries and wildlife habitat, have good water quality, and are not significantly impacted by human activities. ORW and ERW status identifies waters that the State of Wisconsin has determined warrant additional protection from the effects of pollution. These designations are intended to meet federal Clean Water Act obligations requiring Wisconsin to adopt an "antidegradation" policy that is designed to prevent any lowering of water quality – especially in those waters having significant ecological or cultural value.¹²¹

- ORWs: ORWs typically do not have any point sources discharging pollutants directly to
 the water (for instance, no industrial sources or municipal sewage treatment plants),
 though they may receive runoff from nonpoint sources. New discharges may be
 permitted only if their effluent quality is equal to or better than the background water
 quality of that waterway at all times—no increases of pollutant levels are allowed.
- ERWs: If a waterbody has existing point sources at the time of designation, it is more likely to be designated as an ERW. Like ORWs, dischargers to ERW waters are required to maintain background water quality levels; however, exceptions can be made for certain situations when an increase of pollutant loading to an ERW is warranted because human health would otherwise be compromised.

Waters currently designated as ORWs and ERWs are listed in Wisconsin's Administrative Code in chapters NR 102.10 (ORWs) and NR 102.11 (ERWs). According to the WDNR website and the Wisconsin Administrative Code, there are no ORW or ERW waters listed within the Appleton (Fox Cities) TMA.

Wetlands

Wetlands act as a natural filtering system for nutrients such as phosphorus and nitrates. More importantly, wetlands also serve as a natural buffer protecting shorelines and stream banks from erosion. Wetlands are essential in providing wildlife habitat, flood control and groundwater recharge. Consequently, local, state and federal regulations place limitations on the development and use of wetlands and shore lands. A number of the communities within the TMA have local ordinances that regulate wetlands. The U.S. Army Corps of Engineers has authority over the placement of fill materials in virtually all wetlands two acres and larger or adjacent to navigable waters. The Wisconsin Department of Natural Resources and United States Department of Agriculture also have jurisdiction over wetlands within Wisconsin. The U.S. Department of Agriculture incorporates wetland preservation criteria into its crop price support programs. Prior to placing fill or altering wetland resources, the appropriate agencies must be contacted to receive authorization.

http://dnr.wi.gov/topic/SurfaceWater/orwerw.html; Last revised October 17, 2013.

The wetlands surveyed according to the Wisconsin Wetlands Inventory (WWI) Map are shown in **Map 16-4 and Insets A-H**. The WWI maps show graphic representations of the type, size and locations of wetlands in Wisconsin. They have been prepared from the analysis of high altitude imagery in conjunction with soil surveys, topographic maps, previous wetland inventories and field work. Therefore it should be noted that using remotely sensed information as a primary data source places limitations on the information. As a result this information should be used as a guide for planning purposes only. 122

Wetlands within the Appleton (Fox Cities) TMA are somewhat scattered, but larger wetland associations are found near the Town of Center and Grand Chute. Wetland vegetation can be classified as Forested Broad Leaved Deciduous, Forested Emergent Wet Meadow, Emergent Wet Meadow, and Shrub/Shrub Broad Leaved Deciduous. Not including small tracts of wetlands (less than five acres); only about 5.98 percent 10,233.84 acres) of the Appleton (Fox Cities) TMA is classified as wetlands; of which approximately 0.74 percent (1,266 acres) fall within the quarter mile and 250 foot project buffer zones.

Mitigation Issues and System Level Mitigation Measures:

If at all possible avoid locations in proximity to wetlands. If project location is unavoidable, a wetland mitigation plan should be developed that identifies measures proposed to minimize adverse impact and replace lost wetland habitat values and other wetland functions and values. A mitigation plan should include design features such as culverts to retain hydrological connection between areas fragmented by the project, soil erosion protections, control and limitation of pollutants, vegetation buffers and sedimentation control measures. Mitigation measures should be centered around sound construction management practices and permitting. Projects that are in the vicinity of wetlands within the Fox Cites TMA include:

- Project 1: STH 55 / Lawe St. USH 41, Reconstruction
- Project 2: STH 124 / USH 41 STH 47, Resurface
- Project 3: STH 441, USH 41 USH 41, Road Maintenance

Floodplains

Areas susceptible to flooding are considered unsuitable for development due to potential health risks and property damage. Floodplain information for the TMA is contained within the following documents: FEMA Floodplain 2003, Winnebago County adopted by FEMA on March 17, 2003 and Winnebago County on March 25, 2003; Flood Insurance Rate Maps (FIRM) for Calumet County (Unincorporated Areas) Community Panel Number 5500535 0055 B and 550035 0060 B; Flood Insurance Rate Maps (FIRM) for Outagamie County (Unincorporated Areas) Community Panel Number 550302 0050 B, 550302 0083 C, 550302 0084 C, 550302 0092 C, 550302 0100 C, Flood Insurance Study for Appleton WI (February 1973), Flood Insurance Study for the Village of Combined Locks WI (December 15, 1980), Flood Insurance Study for the City of Kaukauna, WI (January 16, 1981), Flood Insurance Study for the Village of Kimberly, WI (November 17, 1981). 100 year floodplain information is shown on **Map 16-4, Insets A-H**.

While floodplains are scattered throughout the TMA, larger areas are associated with Bear Creek and the wetland areas northwest of USH 41, Apple Creek, Neenah Slough, Lake Winnebago and the Fox River (**Map 16-4, Insets A-H**). Approximately 7.4 percent (12, 675.83 acres) of land within the Appleton (Fox Cities) TMA are within the 100 year floodplain; of which approximately 0.8 percent (1,370 acres) are within the quarter mile and 250 foot project buffer zones.

Mitigation Issues and System Level Mitigation Measures:

In general, several projects are either within close proximity or are in a 100 year floodplain. Most of these projects represent stream and river crossing or work near Lake Winnebago. However, from a system level view, certain areas within the Fox Cities have flooded in the past. Therefore, project staging and safety/security issues should be coordinated to avoid potential emergency response problems during construction. Maps contained in this report should help facilitate examination of these system level issues by transportation or emergency management agencies and land use decision makers to potentially mitigate impacts of floods on public property and on public safety.

Additionally, there is a special need for sound construction engineering and management practices when constructing public facilities in flood prone areas. Projects in proximity of the 100 year floodplain include:

- Project 2: STH 124 / USH 41 STH 47, Resurface
- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 4: Province Terrace Trail
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion
- Project 8: USH 41 / Appleton Green Bay CTH J, Orange Lane
- Project 9: I-41 Conversation / State Line Green Bay, SCL Dodge Co. I-43 Signing
- Project 10: French Road / STH 96 CTH OO, Reconstruction

Hazardous and Contaminated Sites

The WDNR Bureau of Waste Management Program operates the Solid and Hazardous Waste Information System (SHWIMS) provides access to information on sites, and facilities operating at sites, that are regulated by the Wisconsin DNR Waste Management program. Activities that occur at facilities include landfill operation, waste transportation, hazardous waste generation,

wood burning, waste processing, sharps collection and many more. A search of the data base for solid waste landfills/disposal facilities indicates that there are 7 landfills/disposal facilities within the Appleton (Fox Cities) TMA.

The WDNR Remediation and Redevelopment (RR) Program oversees the investigation and cleanup of environmental contamination and the redevelopment of contaminated properties. A tracking system, the Bureau of Remediation and Redevelopment Tracking System (BRRTS) is available on the internet. This on-line database provides information about contaminated properties and other activities related to the investigation and cleanup of contaminated soil or groundwater in Wisconsin. According the website, there are 1,164 Environmental Repair (ERP) sites and Leaking Underground Storage Tank (LUST) Sites in Calumet, Outagamie, and Winnebago Counties within the MPO planning area. See **Appendix I** for further information.

Mitigation Issues and System Level Mitigation Measures:

Hazardous materials contamination is more of an issue in project construction design and best management practices, as developed through the project review and construction permit process. Consideration of these sites at the stage of system planning may enhance opportunities to coordinate site closure, cleanup, construction and remediation economies of scale and permit earlier more cost effective environmental mitigation of these sites. Mitigation practices for hazardous/contaminated materials or sites include a project area contamination survey to determine if any known or potential sites of environmental contamination exist that could affect the project's design, cost or schedule. Common hazardous/contaminated sites identified include leaking underground fuel storage tanks from former or existing gas stations, former landfills, adjacent industrial or commercial operations and asbestos lined utility pipes or structure components. Special attention may be warranted when transportation projects and LUST site clusters also correspond to wellhead, flood prone or other areas where mitigation may be even more important to protect public health.

Wildlife Resources

Wildlife Habitat

Ecological landscapes are areas that differ from each other in ecological attributes and management opportunities. They have unique combinations of physical and biological characteristics, such as climate, geology, soils, water and vegetation. Levels of biological productivity, habitat suitability, and the presence of rare species and natural communities also differ. The Appleton (Fox Cities) TMA falls within the Southeast Glacial Plains Ecological Landscape and the Central Lake Michigan Coastal Landscape. 123

- Southeast Glacial Plains Ecological Landscape covers the bulk of the non-coastal area in southeast Wisconsin and totals approximately 4.9 million acres. This landscape is characterized by gently rolling to flat topography with clay or silt loam textured soils on glacial till plains and moraines. The Kettle Interlobate Moraine and Horicon Marsh are part of this ecological landscape.
- Central Lake Michigan Coastal Landscape stretches from southern Door County west across Green Bay to the Wolf River drainage, then southward in a narrowing strip along the Lake Michigan shore to central Milwaukee County and totals approximately 1.8 million acres. This landscape is rolling where the surface is underlain by ground moraine, variable over areas of outwash, and nearly level where lacustrine deposits are present. The soil consists of clays, loams, sands, and gravels. The dolomite Niagara Escarpment is the major bedrock feature, running across the entire landscape from northeast to southwest in this landscape.

Together, these ecological landscapes support numerous habitat types. Habitats found within the TMA include streams, lakes, rivers, woodlands, marshes, open wet meadows, and fallow/abandoned farmland. Within the Outagamie County portion of the Appleton (Fox Cities) TMA, wildlife consists of white-tail deer, small mammals (cotton-tailed rabbit, squirrels, red fox, and muskrat), pheasants, partridges, grouse and many species of waterfowl. The Winnebago County Soil Survey indicates that within the TMA wildlife is comprised of pheasant, partridge, cottontail, gray squirrel, fox squirrel, deer, ruffled grouse, waterfowl (mallards, blue winged teal) and songbirds. Finally, within the Calumet County portion of the Appleton (Fox Cities) TMA, wildlife consists of game species (pheasants, Hungarian partridge, white-tailed deer, Wilson's snipe, woodcock, wood ducks, mallards and blue winged teals) and non-game species.

Woodlands

Originally, forest cover in the Appleton (Fox Cities) TMA was a combination of hardwood forests that included sugar maple, basswood, oak (red, white, black and burr), and beech. Swamp conifers such as white cedar, black spruce, tamarack and hemlock are indigenous to wetland areas. Today, the same types of forest cover exist. Large stands of woodlands are concentrated in the Town of Grand Chute in wetland areas (northwest of USH 41), as well scattered throughout the TMA. The Bubolz Nature Preserve is found in one of these wetland areas.

¹²³ WDNR, http://dnr.wi.gov/topic/landscapes/Maps.html Accessed 6/24/14.

Soil Survey of Outagamie County, Wisconsin. November 1978.

Soil Survey of Winnebago County, Wisconsin. May 1980.

¹²⁶ Soil Survey of Calumet County, Wisconsin. February 1980.

Forest and woodlands can be classified into one of two categories: general (unplanted) woodlands and planted woodlands (**Map 16-5**, **Inserts A-H**). General woodlands are naturally occurring forests and hedgerows. Planted woodlands are tree plantations in which trees are found in rows; these areas include orchards, timber tracts and other general uses. Woodland information was obtained from land use data that was interpreted from aerial photographs and field verified. Land use data was updated by ECWRPC in May of 2010. General woodlands consist of approximately 4.76 percent (1321.3 acres) of the MPO area; planted woodlands consist of approximately 0.7 percent (188.4 acres) of the MPO area. Of this amount, about 11 percent of general woodlands and 1.6 percent are within the quarter mile and 250 foot project buffer zones.

Mitigation Issues and System Level Mitigation Measures:

In general, a visual inspection allows identification of areas where continuous stands of woodlands should be considered in relation to projects.

Although some tree removal will be necessary, existing and ornamental vegetative cover should be retained whenever possible within the right-of-way. Where existing groundcover must be removed, replacement vegetation should be established in a timely manner using seed and mulch or sod. Roadside trees adjacent to residences should be saved whenever possible. Where trees are to be removed in front of residences, property owners should be given appropriate notice, and should be offered replacement trees to help offset the functional or aesthetic loss of the trees. Public ownership is limited and partnerships between public and private partners will be essential to accomplish long-term management goals and objectives for natural resources.

Replacement tree species, size and number will be determined by the WisDOT following coordination with adjacent property owners. Several projects within the Appleton (Fox Cities) TMA either cross, are in proximity to, or go through woodlands. These projects include:

- Project 1: STH 55 / Lawe St USH 41, Reconstruction
- Project 2: STH 125/USH 41 STH 47, Resurface

- Project 95: W Spencer St / Mayflower Casaloma, Reconstruction

Rare, Threatened, and Endangered Species and Natural Communities

The Fish and Wildlife Service (FWS) in the Department of the Interior and the National Oceanic and Atmospheric Administration (NOAA)-Fisheries in the Department of Commerce (National Marine Fisheries Service – NMFS) share responsibility for administration of the Endangered Species Act (ESA)¹²⁷. The purpose of the ESA is to protect and recover imperiled species and the ecosystems upon which they depend. The FWS has primary responsibility for terrestrial and freshwater organisms, while the NMFS are mainly responsible for marine wildlife such as whales and anadromons fish such as salmon.

Under the ESA, species may be listed as either endangered or threatened. "Endangered" means a species is in danger of extinction throughout all or a significant portion of its range. "Threatened" means a species is likely to become endangered within the foreseeable future. Before a plant or animal species can obtain the protection of the ESA, it has to be added to the federal lists of threatened and endangered plants and wildlife. The List of Endangered and Threatened Wildlife (50 CFR 17.11) and the List of Endangered and Threatened Plants (50 CFR 17.12) contain the names of all species of mammals, birds, reptiles, amphibians, fishes, insects, plants and other creatures that have been determined by the USFWS and the National Oceanic & Atmospheric Administration (NOAA) Fisheries (for most marine life) to be in greatest need of federal protection. As of March 2008, the USFWS has listed 1,925 species worldwide as endangered or threatened; 1,351 occurred in the United States. In April 2014, there were 2,149 listed worldwide, an 11.6% increase and 1,524 species in the US an increase of 12.8%.

Species are listed as endangered or threatened based solely on their biological status and threats to their existence. FWS considered five factors when evaluating a species (1) damage to, or destruction of, a species habitat; (2) overutilization of the species for commercial, recreational, scientific or educational purposes; (3) disease or predation; (4) inadequacy of existing protection; and (5) other natural or manmade factors that affect the continued existence of the species.

Candidate species are plants and animals for which the USFWS has sufficient information on their biological status along with the threats they face, to propose them as endangered or threatened under the Endangered Species Act. However, development of a proposed listing regulation is precluded by other, higher priority listing activities. Candidate species receive no legal protection. However, the USFWS encourages concerned parties to form partnerships to

http://www.fws.gov/endangered/, Accessed 04/25/14.

conserve these species, because they are species that may warrant protection in the future under the ESA.

The Wisconsin Natural Heritage Inventory (NHI) program¹²⁸ is part of an international network of NHI programs coordinated by Nature Serve¹²⁹. The program uses a standard methodology for collecting, characterizing, and managing data. NHI programs focus on locating and documenting occurrences of rare species and natural communities, including state and federal endangered and threatened species. Due to the vulnerability of rare species to collection and destruction, NHI data is exempt from the Wisconsin Open Records Law.

The U.S. Fish and Wildlife Service (USFWS) identifies' two (2) federally listed species for Calumet and three (3) for Winnebago Counties¹³⁰ Outagamie County listed two (2) species. Please refer to (**Map 16-5 and Inserts A-H**).

Table 16-4 is a listing of federally endangered species:

Table 16-4: Federally Listed Endangered, Threatened, Proposed and Candidate Species in Calumet, Outagamie, and Winnebago Counties

Species	Status	Habitat	County
Whooping Crane (Grus americanus)	**Non-essential experimental population	Open Wetlands and lakeshores	Calumet Winnebago
Northern Long-Eared Bat (Myotis septentrionalis)	Proposed Endangered	Live and dead tree crevices, mines and caves	Calumet Outagamie Winnebago
Snuffbox mussel (Epioblasma triquetra)	Endangered	Freshwater – Great Lakes and Mississippi River	Outagamie
Eastern prairie fringed orchid (Platanthera leucophaea)	Threatened	Wet Grasslands	Winnebago

Source: U.S. Fish and Wildlife Service: http://www.fws.gov/endangered

Mitigation Issues and System Level Mitigation Measures:

Calumet and Outagamie counties are home to two federally listed species, while Winnebago County is home to three. Early in the planning phase, field surveys may be necessary to identify rare, endangered and threatened species and/or habitat that may be impacted during construction and continued maintenance of the project. Depending on the species identified; seasonal and other limitations may be imposed on the project. Approximately 9 percent (1,022 acres) of endangered terrestrial species fall within the quarter mile and 250 foot buffer zones; and approximately 22 percent (2,518 acres) of endangered aquatic species fall within the quarter mile and 250 foot buffer zones.

The DNR Aquatic Terrestrial Resource Inventory (ATRI database), http://wiatri.net/indexIE.htm was reviewed but not utilized since the database contains information from the WNHI program. The WNHI program houses the most complete database on the locations and status of rare species, natural communities, and natural features in Wisconsin. Data provided by the WNHI are not based on a comprehensive rare species inventory of the state. The WNHI makes no guarantee or warranty concerning the accuracy or completeness of information contained in the database and does not necessarily endorse any interpretation or products derived from the data.

- Project 88: USH 41 Hwy Rehab
- Project 89: USH 41 / WIS 15 CTH J, Highway Maintenance

Parks, Open Space, and Recreational Resources

Public open space such as parks and parkways are important to the quality of life within a community. These lands serve many purposes including outdoor recreation and education; buffers between different land uses; flood and stormwater management; habitat preservation; air and surface water quality improvements; protection of groundwater recharge areas; and aesthetics.

Mitigation Issues and System Level Mitigation Measures

Potential impacts on parks, open space and recreational areas should be considered during the planning, design, construction and maintenance of transportation projects. Parks, open space and recreational areas are considered impacted if land is acquired for a project, if land is otherwise occupied (such as a retention basin) in a manner that is adverse to the recreational purpose of the land or if a project in the proximity of the resource substantially impacts its purpose.

Section 4(f) of the United States Department of Transportation Act of 1966 (subsequently codified into 49 United States Code Section 303) stipulates that federally funded transportation projects cannot use publicly-owned public parks or recreation areas unless there is no feasible and prudent alternative to the use of the land, and that the action includes all possible planning to minimize harm resulting from the use.

Planning should include an inventory of existing and future identified park, open space and recreation areas to determine if the resource could be impacted by the transportation project. If possible avoid impacts to park, open space and recreational areas. Where impacts are unavoidable, mitigate them as much as possible. Some mitigation techniques to consider include (1) acquiring the impacted property and compensating for the loss either monetarily or by acquiring replacement land; (2) acquire scenic easements and construct appropriate visual screening consistent with the context of the recreational use; (3) Restore, relocate or rehabilitate impacted features and context (natural areas and facilities); (4) Preserve as much of the resource and site features as possible; and (5) avoid and mitigate new visual, atmospheric, and/or audible elements that detract from the character of the resource.

Wisconsin Department of Natural Resources (WDNR) and Public Lands

Since 1876, the State of Wisconsin has been acquiring land to meet conservation and recreation needs. Public lands managed by the Wisconsin Department of Natural Resources provide many opportunities and public spaces to hunt, fish, hike, canoe, or watch or photograph wildlife.

State Fishery Areas (SFAs) protect important waterways in Wisconsin by providing a natural buffer from agricultural practices and urban runoff. SFAs often preserve and manage the headwaters or springs of streams which serve as the biological base for fish and other aquatic

life. SFAs also increase the availability of public access to navigable waterways throughout the state. State Wildlife Areas are managed to sustain the wildlife and natural communities found on the properties and to provide a full range of traditional outdoor recreational uses. There are no State Wildlife Areas in the Appleton (Fox Cities) TMA.¹³¹

State Parks and Forests provide places for outdoor recreation and for learning about nature and conservation. There are no State Parks or Forests in the Appleton (Fox Cities) TMA.¹³²

Open Space

Public open spaces such as parks, natural areas and parkways are important to the quality of life within a community. These lands serve many purposes including outdoor recreation and education; buffers between different land uses; flood and stormwater management; habitat preservation; air and surface water quality improvements; protection of groundwater recharge areas; and aesthetics. They can also enhance the value of nearby properties.

Recreational Trails

A multitude of recreational trails intersect the Appleton (Fox Cities) (**Map 16-6**, **Inserts A-H**). Some of the trails are listed below:

- American Drive Trail extends along American Drive in the Town of Menasha.
- Apple Creek Trail is located between Meade Street and Holland Road and the north side of Appleton.
- CB Trail runs 4.1 miles along CB from CTH II to CTH JJ in the Town of Neenah.
- **CE Trail** is located on the north side of County Highway CE. This 5.3 mile multipurpose paved trail extends from Appleton to Kaukauna.
- City of Kaukauna Trail provides a connection to a number of areas within the city.
- Cold Springs Trail extends along Cold Springs Road in the Town of Menasha.
- County II Trail extends along CTH II in the Town of Menasha.
- *Friendship Trail* intersects with the WIOUWASH and helps connect other local Fox Valley Trails, including the Little Lake Butte Des Morts trestle bridge.
- FVTC Trail is two miles in length, it winds through the FVTC property and up to the
 overpass, crossing Highway 41 and then down past the Fox Cities Stadium to
 Casaloma.
- Gordon Bubolz Nature Preserve Trails provides 8 miles of tracked X-country ski trails and 3 miles of hiking & snowshoe trails (winter). Over 8 miles of walking trails in dry periods of summer and fall.

http://dnr.wi.gov/topic/lands/WildlifeAreas/.

http://dnr.wi.gov/topic/lands/.

- **Grand Chute Trail** extends from the Fox Cities Stadium south to Spencer Street in the Town of Grand Chute.
- **Greenville Trail** connects Greenville Lions Park, Jennerjohn, Greenville Community Park and other destinations in the Town of Greenville.
- **Highline Trail** starts at CTH N in the Village of Harrison and goes to State Park Road linking Clover Ridge Park.
- Highview Trail starts in Highview Park and travels north and then east to Meade Street.
- Highway 10 Trail is a segment of the future Friendship Trail, the Highway 10 trail
 currently runs from American Drive to County CB. This trail will be extended as Highway
 10 is completed to the West.
- Kaukauna Trail provides a connection between various destinations in the City of Kaukauna.
- Konkapot Creek Trail provides a 1-1/4 mile connection between the Dodge Street (City of Kaukauna) and the CE Trail.
- Menasha On-Street Trails provides an on-street north-south connection between Memorial Drive and Broad Street.
- Neenah Access Trails extends for about 20 miles and provides a connection to a number of sites in the City of Neenah.
- Newberry Trail extends 1.2 miles in length from Telulah Park to Olde Oneida Street.
- Newberry Trail Link extends from East College Avenue north to the intersection at Matthias and Peter streets in Appleton.
- North Island Trail extends 0.4 miles from Lawe Street to Olde Oneida Street in the City
 of Appleton.
- Oshkosh-Fox Cities Trail will provide a connection between Neenah and Oshkosh.
- Paper Trail is a 42 mile trail utilizing existing trails and creates a circle around the Fox Cities Area.
- Plank Road Trail is an off road trail along the South side of State 114 from Baldwin St. to Oneida Street.
- Plamann Park Trail consists of the trails in Plamann Park.
- Providence Trail is located west of Providence Avenue.

- **Shady Lane Trail** is located in the Town of Menasha; the trail runs from the Cold Spring Rd. trail to just west of the CB Trail.
- Thousand Island Trail is located in the City of Kaukauna at the 1000 Island Nature Center.
- *Trestle Trail* spans Little Lake Butte des Morts, from Fritse Park in the Town of Menasha to The City of Menasha near the Menasha Locks.
- *Tri-Parkway Trail* is located in the Tri-Park Business Park in the Town of Grand Chute.
- **Stone Bridge Trail** is located west of Brewster Village. The paved trail winds through a wooded area and connects to a network of trails in the Town of Grand Chute.

Mitigation Issues and System Level Mitigation Measures:

Almost all the projects within the Appleton (Fox Cities) TMA either cross, are in proximity to, or go through recreational trails, thus a visual inspection of each site for trail activity should be considered in relation to projects (**Map 16-6, Insets A-H**).

Heritage Routes and Rustic Roads

Heritage Routes

The Fox-Wisconsin Heritage Parkway is currently pursuing a federal designation as a National Heritage Area. The parkway follows the Marquette and Joliet route of discovery and incorporates the Lower Fox, the Upper Fox and the Lower Wisconsin rivers. Much of the Appleton (Fox Cities) TMA is included within the parkway. A national water trail designation was established early in 2014.

Rustic Roads

The Rustic Roads System was created by the State Legislature in 1973 to help citizens and local units of government preserve scenic lightly traveled country roads for the leisurely enjoyment of bicyclists, hikers, and motorists. They offer excellent opportunities to travel through attractive rural areas. The scenic qualities of these roads are protected by agreement with bordering property owners and by implementing roadside maintenance practices that allow wildflowers and other native flora to extend to the edge to the pavement. According to the WisDOT website there is only one rustic road within the Appleton (Fox Cities) TMA. Rustic Road number 53 is a 4.1 mile segment of road is in Outagamie County that covers portions of Garrity Road, McCabe Road, Greiner Road and Bodde Road between USH 41 and County Highway JJ.

¹³³ WisDOT. 2005. Wisconsin's Rustic Roads: A Positive Step Backward. http://www.dot.state.wi.us/travel/scenic/rusticroads.html.

http://www.dot.wisconsin.gov/travel/scenic/rusticroad82.htm.

Mitigation Issues and System Level Mitigation Measures

Potential impacts on Heritage Routes and Rustic Roads should be considered during the planning, design, construction and maintenance of transportation projects. Heritage Routes and Rustic Roads are considered impacted if land is acquired for a project, if land is otherwise occupied in a manner that is adverse to the recreational purpose of the land or if a project in the proximity of the resource substantially impacts its purpose.

The Fox-Wisconsin Heritage Route is a designation, thus requiring potential projects within proximity to consider the effects of the project on the designation. A number of projects are within proximity to the Heritage Route. Projects that are within proximity to either a Heritage or Rustic Road include:

- Project 2: STH 125/USH 41 STH 47, Resurface
- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 5: CTH CB Bike to Work Trail
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion
- Project 9: I-41 Conversion / State Line Green Bay
- Project 14: Broad Street/Tayco Racine, Reconstruction
- Project 53: Airport Road/Racine –STH 47, Reconstruction
- Project 65: Racine St / Third Ninth, Reconstruction
- Project 75: Winneconne / USH 41 Neenah Slough, Reconstruction, Local
- Project 76: Green Bay Rd. / Fox Point Shopko, Reconstruction, Local
- Project 78: Nicolet/First Ninth, Resurface
- Project 79: CTH A/Indian Point Neenah, Reconstruction, Urban
- Project 80: CTH G/CTH A WIS 76, Reconstruction, Urban
- Project 81: STH 76 / USH 41 CTH JJ, Reconstruct
- Project 88: USH 41 Hwy Rehab
- Project 90: USH 41 / USH 10 USH 41, Resurface
- Project 92: USH 10 Waupaca Menasha, NCL STH 441

Environmental Corridors

Environmental corridors are continuous systems of open space created by the natural linkage of environmentally sensitive lands such as woodlands, wetlands and habitat areas that provide important travel ways for a variety of wildlife and bird species. These features are sensitive natural resources; preserving the corridors from development protects habitat and keeps non-point source pollution to a minimum thus ensuring that high quality groundwater and surface water is maintained and habitat is not impaired. Within the Appleton (Fox Cities) TMA, environmental corridors include the Fox-Wisconsin Heritage Parkway, recreational trails and waterways.

Mitigation Issues and System Level Mitigation Measures

Environmental corridors have the potential to be impacted during construction of transportation projects, thus a careful analysis of environmental corridors within proximity of transportation projects should occur. Transportation projects at a system level analysis that will have adverse effects on the environmental corridors are described in the following sections of this report:

Heritage Routes and Rustic Roads; Lakes and Ponds; Recreational Trails; and Rivers and Streams.

Natural Areas/County and Local Parks/Nature Centers

Below is an inventory of the natural areas, county and local parks and nature centers found within the Appleton (Fox Cities) TMA.

Natural Areas and Nature Centers

Natural areas and nature centers provide for a range of active and passive regional recreational activities. A listing of these facilities and a brief description follows:

- Memorial Park Arboretum & Gardens Scheig Learning Center
 1313 E. Witzke Blvd., Appleton. This 35 acre arboretum, gardens and learning center provide a microcosm of native Wisconsin trees, plants and blooming floral displays.
- Heckrodt Nature Center is located at 1305 Plank Road (Highway 114)
 Menasha. This 76-acre urban nature reserve consists of natural habitats that include a
 forested wetland, cattail marsh, open water, open field, and upland forest. The Reserve
 is home to numerous species of reptiles, amphibians, mammals and migrating songbirds
 and waterfowl. 136
- Menasha Conservancy Area is located north of STH 114-USH 10 on the eastside of the city.
- Carpenter Preserve is located in the City of Neenah between CTH Q and Breezewood
 I ane
- Bruce B. Purdy Nature Preserve in the City of Appleton off of Purdy Parkway.
- Gordon Bubolz Nature Preserve is located at 4815 N. Lynndale Dr., Appleton. The preserve includes about 775 acres and provides educational and recreational opportunities.¹³⁷
- Wilderness Park Area is located at 940 S. Park Street in the City of Neenah. This area offers residents a natural setting.
- 1000 Islands Nature Center is located at 700 Dodge Street, Kaukauna. A 300 acre wildlife refuge and nature center located along the Fox River.
- Art Lecker Wilderness Park is located at the north end of Gillett Street, north of CTH JJ in the Town of Grand Chute. This 42.3 acre former landfill site is not used as an active park. Ten acres of the site includes the former landfill, while the remainder is forested.

¹³⁵ http://www.gardensfoxcities.org/.

http://www.heckrodtwetland.com/Heckrodt.html.

http://www.bubolzpreserve.org/.

- Old Stone Bridge Wooded Area is located north of Brewster Village and south of Fox Valley Technical College and west of Bluemound Road. This area consists of a wooded green space; the Stone Bridge Trail runs through the property.
- **Stonegate Park and Conservancy** is located in the City of Appleton.
- Huber Open Space will be a 12.62 acre preserve along Little Lake Butte des Morts in the Town of Menasha that includes wetland, a prairie community, and a navigable stream.
- **Pearl-Stroebe-Cox Open Space** is a 12.34 acre preserve on Strobe Island in the Town of Menasha. It encompasses wetlands, Woodlands, 100-year floodplain and marsh bottoms.
- Wildlife Heights Open Space is a 4.06 acre preserve located in the Town of Menasha, west of CTH CB and south of USH 10 in Wildlife Heights Subdivision. It encompasses wetlands, woodlands, and an intermittent navigable stream.
- Gateway Subdivision Open Space contains 13.56 acres and is located on the west side of the Town of Menasha in Gateway Subdivision.
- **High Plain Meadows Open Space** contains 0.68 acres and is located in the north central portion of the Town of Menasha in High Plain Meadows Subdivision.
- Annex Lane is an open space on Little Lake Butte des Morts in the Town of Menasha. It
 is considered an environmentally sensitive area as defined by ECWRPC.
- **Brighten Beach Open Space** is an 8.98 acre site that has substantial acreage of wetlands, woodlands, and 100- and 500- year floodplain.
- **Prairie Creek Open Space** contains 1.92 acres in the Prairie Creek Subdivision in the Town of Menasha.
- *Amber Woods Property* contains 7.6 acres and is located in the Town of Greenville. The property is currently wooded, though future plans include a nature trail.
- Herziger Conservancy Area contains 9 acres and is located in the Town of Neenah at
 the corner of CTH A and South Park Avenue. The conservancy was built with a wet
 detention pond and a future area for prairie grasses, wildflowers, and wetland plantings
 a small parking lot and trails are planned as future projects along with the elimination of
 invasive species and a nature program with the help from nearby Neenah Elementary
 schools as part of developing the park.

County Facilities

• **Plamann Park** is located at 1375 E. Broadway Drive, Town of Grand Chute. Amenities within this 257 acre park include a children's farm, disc golf course, swimming lake, park

shelters, picnic areas, playgrounds, hiking, snowmobile and ski trails, and sledding hill. 138

- Outagamie County Forest is located south of Highway 15 and east of Casaloma Drive in Grand Chute. The forest is a wooded natural area that is a good area for bird watching and hiking. A trail on south edge connects to a network of trails in the Town of Grand Chute.¹³⁹
- Outagamie County Dog Recreational Park is located on French Road in the Town of Buchanan.

Local Parks

Numerous local parks exist within the Appleton (Fox Cities) TMA (**Map 16-6**, **Insert A-H**). A few of the larger community parks are listed below:

- **Jefferson Park** on Third Street in the City of Menasha encompasses 29 acres and includes a swimming pool, pavilion, picnic tables and playground.
- Memorial Park Arboretum & Gardens Scheig Learning Center
 1313 E. Witzke Blvd., Appleton. This 35 acre arboretum, gardens and learning center provide a microcosm of native Wisconsin trees, plants and blooming floral displays.
- **Memorial Park** at 1131 Tullar Road in Neenah covers about 105 acres. Facilities include picnic tables, soccer fields, baseball, pavilion and playground.
- Prairie Hill Park is located at 2900 West Abendroth Street in the Town of Grand Chute.
 The 26 acre facility has a children's playground, winter sled hill, pavilion, fishing dock and picnic tables.¹⁴¹
- Riverside Park is located in downtown Neenah on the Fox River and includes the
 infamous "Rocket" playground with a bandshell, shelters, walking paths, and an area for
 the Fox Valley Sailing Club.
- **Sunset Park** is located at West Kimberly Avenue in Kimberly. It encompasses 80 acres and includes many amenities including a swimming area, lighted ball fields, playground area, pavilions and walking paths.

Mitigation Issues and System Level Mitigation Measures:

Numerous park facilities have the potential to be impacted during construction of the transportation projects. While, the facilities themselves may not be impacted, access to the facilities could be restricted. Therefore, construction and timing near these facilities should be coordinated with the appropriate municipal and school departments so that disruption of facility use is limited. Projects that could potentially impact park sites include:

- Project 94: STH 114 / USH 10 S. Junction STH 55, Menasha Hilbert

Other Recreation Facilities

Golf courses and country clubs, sports and recreational facilities and spectator sports facilities are abundant within the Appleton (Fox Cities) TMA (**Map 16-6**, **Insert A-H**). A brief description of the different facilities is given below:

Table 16-5: Other Recreational Facilities within the Appleton (Fox Cities) TMA

Municipality	Name	Location
T. Grand Chute	Fox Cities Stadium	2400 N. Casaloma Drive
C. Menasha	Calders Stadium	10 th Street
T. Harrison	Harrison Athletic Complex	W5298 State Highway 114
C. Appleton	Banta Bowl	John Street
C. Kaukauna	Doty Bayorgeon Recreational Area	Dodge Street
C. Appleton	Nienhaus Field	W. Spenser Street
C. Appleton	USA Youth Sports Complex	E. Evergreen Drive
T. Menasha	Youth Sports, Complex	920 Airport Road
C. Neenah	Bridgewood Golf Course	1020 Cameron Way
T. Grand Chute	Butte des Morts Golf Course	3600 W. Prospect Avenue
T. Greenville	Chaska Golf Course	W6575 Wisconsin Avenue
T. Buchanan	Country Side Golf Course	726 W. Weiler Road
T. Harrison	North Shore Golf Course	N8421 Northshore Road
C. Kaukauna	Eagle Links Golf Club	1700 Haas Road
C. Appleton	Reid Municipal Golf Course	1100 E. Fremont Street
T. Neenah	Ridgeway Golf & Country Club	2913 County Road II
C. Appleton	Riverview Country Club	1101 S. Oneida Street
T. Neenah	Westridge Golf Club	8130 Golf Course Drive
T. Buchanan	Wisconsin International Raceway	W1460 County Road KK
C. Appleton	YMCA of the Fox Cities	218 E. Lawrence
T. Grand Chute	Apple Creek YMCA	2851 E. Apple Creek Road
T. Greenville	YMCA Fox West	W6931 School Road
V. Kimberly	YMCA Heart of the Valley	225 W. Kennedy Avenue
C. Neenah	YMCA Neenah-Menasha	110 W. North Water Street

Mitigation Issues and System Level Mitigation Measures

Golf courses and country clubs, sports and recreational facilities and spectator sports facilities have the potential to be impacted during construction of the transportation projects. While, the facilities themselves may not be impacted, access to the facilities could be restricted. Therefore, construction and timing near these facilities should be coordinated with the appropriate facility. Projects within proximity of other recreational areas include:

Golf Courses:

- Project 16: Northshore Ext. of Friendship Trail, Friendship State Trail
- Project 36: S. Bluemound Rd. / Prospect Spencer, Reconstruct to Urban, 4-Lane
- Project 42: Gillette Street / Capitol Elsner, Reconstruction, 2-Lane Urban with Bike & Ped. Local
- Project 61: Irish Road/Jacobsen CTH II, Reconstruction
- Project 67: Eisenhower Drive / CTH AP USH/STH 114, Reconstruction, Local
- Project 73: CTH BB/USH 41 Bartell, Reconstruction, 4-Lane, Urban
- Project 87: STH 47, Appleton Bonduel, CTH JJ NCL
- Project 88: USH 41 Hwy Rehab
- Project 89: USH 41 / WIS 15 CTH J, Road Maintenance
- Project 94: STH 114 / USH 10 S. Junction STH 55, Menasha Hilbert

Sports Recreation:

- Project 2: STH 124 / USH 41 STH 47, Resurface
- Project 3: STH 441, USH 41 USH 41, Road Maintenance
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion
- Project 9: I-41 Conversation / State Line Green Bay, SCL Dodge Co. I-43 Signing
- Project 19: 3rd Street, City of Menasha, Lake Winnebago Slough & Approach
- Project 30: Oneida/Capitol Northland Avenue, Reconstruct to Urban
- Project 38: Casaloma / Converters Drive Capitol, Reconstruct to Urban, Local
- Project 50: Kimberly Trail / CE Trail Railroad, Bike / Ped Trail
- Project 52: Lake Street/Railroad Butte, Reconstruction
- Project 59: East Shady/American Cold Spring, Reconstruction
- Project 65: Racine St / Third Ninth, Reconstruction
- Project 68: Eisenhower Drive / CTH KK Cornell, Bike & Ped Trail, Local
- Project 75: Winneconne / USH 41 Neenah Slough, Reconstruction, Local
- Project 76: Green Bay Rd. / Fox Point Shopko, Reconstruction, Local
- Project 79: CTH A/Indian Point Neenah, Reconstruction, urban
- Project 88: USH 41 Hwy Rehab
- Project 90: USH 41 / USH 10 USH 41, Resurface

Air Quality

Air quality, particularly good air quality, is often taken for granted. Clean air is vital to maintain public health. Sound local and regional planning can minimize negative impacts to the air. As communities become more spread out, the use of automobiles increases dramatically, resulting in more emissions and subsequent decrease in air quality. Emissions from certain industrial uses also have the potential to impact air quality.

The Clean Air Act, which was last amended in 1990, requires the Environmental Protection Agency (EPA) to set National Ambient Air Quality Standards¹⁴² for pollutants considered harmful to public health and the environment. Two standards are set; primary and secondary. Primary standard limits are set to protect public health, while secondary standards are set to protect public welfare (protection against decreased visibility, damage to animals, crops, vegetation and

¹⁴² 40 CFR part 50.

buildings). National Ambient Air Quality Standards are set for six principal pollutants; carbon monoxide, lead, nitrogen dioxide, particulate matter, ozone and sulfur dioxide. 143

An ozone air quality monitoring site is located within the TMA at the Thrivent facility at 4432 Meade Street in Appleton. The primary and secondary National Ambient Air Quality Standard for ozone is 0.075 ppm. 144 Ozone is a gas comprised of three atoms of oxygen and can be found in the Earth's upper atmosphere and at ground level. Monitored values of ozone represent ground level ozone, which is not directly emitted into the air. Ozone concentrations typically reach higher levels on hot sunny days in urban environments; it can be transported long distances by wind. The 8-hour ozone design values (ppb) were not exceeded at the Outagamie site between 1997 and 2012.¹⁴⁵ There were no monitoring sites in Winnebago or Calumet counties.

Particulate matter (PM) is a mixture of solid particles and liquid droplets. It includes acids, organic chemicals, metals, soil or dust, and allergens. Fine particle pollution can be emitted directly or formed secondarily in the atmosphere. The primary and secondary National Ambient Air Quality Standard for particulate matter is:

- $PM_{2.5}^{146}$
 - Primary: 12μg/m³, annual mean, averaged over 3 years
 - Secondary, 15μg/m³, annual mean, averaged over 3 years
 - Primary and Secondary, 35μg/m³, 24-hour, 98 percentile, averaged over 3 years
- PM₁₀¹⁴⁷
 - o Primary and Secondary: 150µg/m³, 24-hour, Not to be exceeded more than once per year on an average over 3 years

According to the Wisconsin Air Quality Trends, 2014, Outagamie County did not exceed these standards between 2001 and 2012 for 24-hour PM_{2.5} (standard currently 35µg/m³) or the Annual PM_{2.5} (standard of $15\mu g/m^3$).

To achieve the national air quality standards, EPA has in place regulatory and voluntary programs to reduce the amount of air pollutants emitted from a wide range of emission sources. To keep track of these emissions, EPA maintains the National Emissions Inventory (NEI), the national database of air pollutant emission information. This database is modified at least annually. Since developing and updating this inventory is time-consuming, the data is several years old (Table 16-6).

¹⁴³ http://www.epa.gov/air/criteria.html.

To attain this standard, the 3-year average of the fourth-highest daily maximum 8-hour average ozone concentrations measured at each monitor within an area over each year must not exceed 0.075 ppm. A lower ozone standard is expected to be proposed by US EPA in late 2014. In March of 2008 (Final Rule 16436), the 8-hour standard of 84 ppb was lowered to 75 ppb.

145 Wisconsin Department of Natural Resources, *Wisconsin Air Quality Trends*, April 2014.

¹⁴⁶ PM_{2.5} fine particles less than 2.5 micrometers.

¹⁴⁷ PM₁₀ coarse particles between 2.5 and 10 micrometers.

The annual standard for PM_{2.5} is currently 12 micrograms per cubic meter (Final Rule December 14, 2012, effective January 2014), but all information identified in the Wisconsin Air Quality Trends report should be compared to 15 micrograms per cubic meter.

Table 16-6 State and County Emission Summaries, 2011

Source Sector	Calume	t County	Outagamie County		Winnebago County		Wisconsin	
	Emissions	Emissions	Emissions	Emissions	Emissions	Emissions	Emissions	Emissions
	Tons	Tons	Tons	Tons	Tons	Tons	Tons	Tons
	(PM _{2.5})	(PM ₁₀)

Total	1,128	3,884	3,200	9,665	1,912	6,349	103,503	291,058

Source: State and County Emission Summaries, US EPA. http://www.epa.gov/cgibin/broker? service=data& debug=0& program=dataprog.national 1.sas&polchoice=PM

Sources included in the agriculture sector include: Crops and Livestock Dust; Fertilizer Application; and Livestock Waste. While sources in the dust sector include: Construction Dust; Paved Road Dust; and Unpaved Road Dust. No information on the other pollutants (carbon monoxide, lead, nitrogen and sulfur dioxide) was available.

Mitigation Issues and System Level Mitigation Measures

Particulates in the air can cause or aggravate a number of health problems and have been linked with illnesses and deaths from heart and lung diseases. Particulates of concern include both very small and somewhat larger dust particles and are a mixture of solids and liquids. Smaller particles (less than 10 micrometers) are of a greater concern because they can pass through the nose and throat and get deep into the lungs. Larger particles (greater than 10 micrometers) do not usual reach the lungs but they can irritate eyes, nose and throat.

Fine particulates (less than 2.5 micrometers) are produced anytime fossil fuels (coal, oil and diesel) or wood are burned. They are produced by power plants, wood stoves, motor vehicles, agricultural burning and forest fires to list a few. Coarse "dust" particles (2.5 to 10 micrometers) are produced during crushing or grinding and from vehicles traveling on paved or unpaved roads. They can also be produced by blowing wind over dusty surfaces. Mitigation activities can include watering of dusting surfaces, daily cleanup of dirt tracked on roadways, properly tuned vehicles, avoidance of on-site burning of wood and other waste materials, etc.

Cultural Resources

Cultural Resources, like natural resources are valuable assets which should be preserved. These resources define a community's unique character and heritage. Included in this section is an inventory of historic buildings, sites, structures, objects, archeological sites and districts.

http://www.airnow.gov/index.cfm?action=pubs.aqguidepart.

State and National Register of Historic Places

The Wisconsin Historical Society's Division of Historical Preservation and Public History (HPPH) is a clearing house for information related to the state's cultural resources including buildings and archeological sites. The State Historic Preservation Office (SHPO) is housed within this division. The primary responsibility of the HPPH is to administer the State and National Register of Historic Places programs. The National Register is the official national list of historic properties in the United States that are worthy of preservation. The program is maintained by the National Park Service in the U.S. Department of Interior. The State Register is Wisconsin's official listing of state properties determined to be significant to Wisconsin's heritage. The inventory is maintained by the HPPH. Both listings include sites, buildings, structures, objects, and districts that are significant in national, state, or local history. Sites are chosen based on the architectural, archeological, cultural, or engineering significance. While the WHS website does display National Register listings, eligibility information for those not yet listed, in progress, or determined not eligible is not publicly available. Please contact the HPPH for information on how to gain access to all of the data. 150

Within the Appleton (Fox Cities) TMA, the following properties/districts are listed, by community, on the State and/or National Register of Historic Places (Map 16-7, Insets A-H, Appleton, Kaukauna and Neenah/Menasha). 151 A complete listing of the properties found in Calumet (10 listings), Outagamie (48 listings) and Winnebago (86 listings) counties are contained within Appendix K.

- 1. City of Appleton, Outagamie County 18 listings¹⁵²
- 2. City of Kaukauna, Outagamie County 19 listings
- 3. Village of Little Chute, Outagamie County 2 listings
- 4. Village of Kimberly, Outagamie County 1 listing
- 5. Town of Buchanan, Outagamie County 1 listing
- 6. Town of Center, Outagamie County 1 listing
- 7. Town of Greenville, Outagamie County 2 listings
- 8. Other areas, Outagamie County 3 listings¹⁵³
- 9. Village/Town of Harrison, Calumet County 1 listing
- 10. Other areas, Calumet County 9 listings 154
- 11. City of Menasha, Winnebago County 11 listings¹⁵⁵
- 12. City of Neenah, Winnebago County 27 listings
- 13. Town of Clayton, Winnebago County 1 listing
- 14. Town of Neenah, Winnebago County 1 listing
- 15. Town of Vinland, Winnebago County 1 listing
- 16. Other areas, Winnebago County 44 listings 15

¹⁵⁰ Wisconsin Historical Society email correspondence, 4/24/15.

http://www.wisconsinhistory.org/hp/register/summary.asp. Accessed 6/16/14.

¹⁵² Volksfreund Building was removed from the National Register, no explanation given. Lakeshore Depot was demolished.

153 T. Bovina (1), V. Black Creek (1) and V. Hortonville (1).

¹⁵⁴ T. Brillion (1), T. Brothertown (1), T. Charlestown (1), T. Stockbridge (3), C. Chilton (2) and C. New Holstein (1) Menasha City Hall was torn down and removed from the National Register.

¹⁵⁶ T. Algoma (0), Bell site not listed on National Register), T. Nekimi (1), T. Omro (1), T. Oshkosh (1), T. Rushford (2), T. Winneconne (3), T. Wolf River (1), C. Omro (3), C. Oshkosh (33; Amos House and Buckstaff Observatory removed from National Register, Chief Oshkosh Brewery not on register).

The National Register is not a static inventory. Properties are constantly being added, and, less frequently, removed. It is, therefore, important to access the most updated version of the National Register properties. This can be found by accessing the DHP website.

Mitigation Issues and System Level Mitigation Measures:

While a visual inspection does not suggest any broad system level cumulative environmental impacts to any known properties or historic districts that area listed on the National Register, a few transportation projects do come within close proximity to historic properties. Transportation projects near historic buildings and districts may have to exercise caution so as not to damage these more fragile structures during construction. Additionally, "it is important to consult with WisDOT's Cultural Resources Team (CRT) in the Bureau of Technical Services. For projects that require review under Section 106, the CRT is the single point of contact and all Section 106 review materials come to SHPO through the CRT". Historic buildings that are in close proximity to transportation projects include

- Project 14: Broad Street/Tayco Racine, Reconstruction
- Project 18: Little Chute Canal Bridge, Ped/Bike over Little Chute Lock
- Project 29: Oneida St / Valley Rd Skyline Bridge, Reconstruction
- Project 44: Lincoln Ave/Wilson Vandenbroek, Extension of Lincoln Ave
- Project 49: Prospect Street / CTH N Park, Reconstruction
- Project 65: Racine St / Third Ninth, Reconstruction
- Project 66: Veteran's Lift Bridge, Reconstruction
- Project 78: Nicolet/First Ninth, Resurface
- Project 82: STH 76/STH 15 CTH JJ, Recondition
- Project 85: STH 96 / Washington Claribel, Reconstruct
- Project 91: Racine St. Bridge, C of Menasha

Locally Significant Historic Places

Locally significant historic places are historic structures, historic sites, or historic districts which have a distinctive historic, architectural or cultural significance to a community. The Certified Local Government (CLG) program was enacted as part of the National Historic Preservation Act Amendments of 1980 and has been established in Wisconsin to further encourage and assist historic preservation by local governments. In Wisconsin, a city, village, county, or town can be certified by Wisconsin's State Historic Preservation Office and the Department of the Interior as a CLC in it meets basic criteria. Within the Appleton (Fox Cities) TMA, the City of Appleton and the City of Neenah are CLG's.

Historic Preservation Commissions are part of local governments and established through local preservation ordinances. A commission's size, responsibilities, and authority depend on local laws and the needs of the community. Within the Appleton (Fox Cities) TMA, the following Historic Preservation Commissions have been established¹⁶¹: Appleton Historic Preservation

https://www.wisconsinhistory.org/pdfs/hp/HPR-Commission-List.pdf.

¹⁵⁷ Wisconsin Historical Society email correspondence, 3/25/15.

¹⁵⁸ http://www.wisconsinhistory.org/Content.aspx?dsNav=N:4294963828-4294961311&dsRecordDetails=R:CS94.

The City of Appleton was certified on May 1, 2006.

¹⁶⁰ The City of Neenah was certified on October 3, 1986.

¹⁶¹ Wisconsin Historic Preservation Commissions List, last revised May 2012.

Commission, Kaukauna Historic Preservation Commission, ¹⁶² Menasha Landmarks Commission, and the Neenah Landmarks Commission. A number of these active historic preservation commissions have developed surveys of the architectural and historical resources located in their communities.

Communities also may designate sites that they feel has local significance but are currently not found on the National or State Registry of Historic Places (**Map 16-7, Appleton and Neenah/Menasha Insets**). According to the City of Appleton's website, the following sites are considered either a local historic site or a local historic building:¹⁶³

- Trettin House, 523 W. Eight Street, Appleton
- Union Spring Park: Lutz Ice Company Ice Company Artesian Well Site, 319 N. Union Place, Appleton
- Vulcan Street Plant Replica Hydroelectric Central Station, 530 Vulcan Street, Appleton¹⁶⁴

According to the City of Neenah the following sites are considered either a local historic site or a local historic building¹⁶⁵:

- Fourth Ward Building, 343 Smith Street, Neenah
- Kimberly Double House, 404 406 E. Wisconsin Avenue, Neenah
- Edmund J. Lachmann House / S.N. Pickard House, 1010 E. Forest Avenue, Neenah;
- Legacy Park, Church Street, Neenah
- Neenah Clock Tower, SE corner of S. Commercial Street/STH 114 and Doty Avenue, Neenah

The Wisconsin State Historical Society also maintains a list of Local Historical Societies that are affiliated with the Wisconsin Council for Local History. Local affiliates within the Appleton (Fox Cities) TMA include: the Calumet County Historical Society, the Appleton Area Historical Society, the Freedom Area Historical Society, the Kaukauna Area Historical Society, the Little Chute Historical Society, Outagamie County Historical Society, the Menasha Historical Society, the Neenah Historical Society, and the Winnebago County Historical and Archeological Society.

Mitigation Issues and System Level Mitigation Measures:

While a visual inspection does not suggest any broad system level cumulative environmental impacts to any known properties, a few transportation projects do come within close proximity to Locally Significant Historic Places. Transportation projects near historic buildings may have to exercise caution so as not to damage these more fragile structures during construction. Historic places of local significance that are in close proximity to transportation projects include:

http://www.appleton.org/i/d/community_development/NatlStateLocalSites.pdf.

¹⁶² May not be active.

The Vulcan Street Plant Replica Hydroelectric Central Station has been recognized by the following professional societies: American Society of Mechanical Engineers (Historic Mechanical Engineering Landmark; 1977), American Society of Civil Engineers (National Historic Civil Engineering Landmarks; 1977) and Institute of Electrical and Electronics Engineers (IEEE milestone; 1882).

http://www.ci.neenah.wi.us/community/landmarks-commission/neenah-landmarks.html.

 Project 78: Nicolet/First Ninth, Resurface
- Vulcan Street Plant Replica Hydroelectric Central Station, 530 Vulcan Street, Appleton.
 Project 24: Lawe St / Power Canal Bridge

Architecture and History Inventory (AHI)

In order to determine those sites that are eligible for inclusion on the National Register, the HPPH frequently funds historical, architectural, and archeological surveys of municipalities and counties with the state. Surveys are also conducted in conjunction with other activities such as highway construction projects. A search of the HPPH's on-line Architecture and History Inventory (AHI) database reveals a number of sites within the Appleton (Fox Cities) TMA:¹⁶⁷

Inclusion in this inventory conveys no special status, restrictions, or benefits to owners of these properties. It simply means that some type of information on these properties exists in the HPPH's collections. AHI is primarily used as a research and planning tool. Like the National Register, this is not a static inventory. Properties are constantly being updates. The AHI database is searchable by county, municipality and street; therefore it is recommended that a search of the database be done for each specific project. For technical assistance and up to date inventory information, please contact the database manager at 608-264-6506. While the WHS website does display National Register listings, eligibility information for those not yet listed, in progress, or determined not eligible is not publicly available. Please contact the HPPH for information on how to gain access to all of the data.

Mitigation Issues and System Level Mitigation Measures

Do to the large number of properties on the AHI database; a visual search between the database and transportation projects was not completed. However, as noted above inclusion in this inventory conveys no special status, restriction, or benefits to owners of these properties. This tool is to be used primarily as a research and planning tool. It is suggested that this inventory be consulted during the planning and design stage to see if any locally significant properties are present and that local historic preservation organizations be consulted.

Archaeological Sites Inventory (ASI)

An inventory similar to the AHI exists for known archeological sites across the state; the Archaeological Sites Inventory (ASI). Due to the sensitive nature of archaeological sites, information as to their whereabouts is not currently made available on-line. This information is distributed only on a need-to-know basis. Archaeological sites are added to as they are discovered; discovery is a continual process. For technical assistance and up to date information on sites within a given area, contact the State Historic Preservation Office at the Wisconsin Historical Society. For technical assistance and up to date inventory information,

http://www.wisconsinhistory.org/ahi/summary.asp. Accessed 3/1/10.

The Architecture and History Inventory can be accessed at

http://www.wisconsinhistory.org/Content.aspx?dsNav=N:1189-4294963829.

¹⁶⁹ Comments received by email correspondence with Wisconsin Historical Society, 3/25/15.

¹⁷⁰ Comments received by email correspondence with Wisconsin Historical Society, 4/3/15.

please contact the database manager at 608-264-6506.¹⁷¹ Other types of burial sites include unmarked historic graves and Native American mounds. All burial sites are protected under Wis. Stats. § 157.70 and Wis. Admin. Code § HS 2.04 and you must obtain permission from the SHPO prior to any ground disturbing activity within the boundaries of the burial site. Information on the process as well as the Request to Disturb a Burial Site form is located on our website at wisconsinhistory.org. Consult the ASI for a full list of burial sites within any given project area. ¹⁷²

Mitigation Issues and System Level Mitigation Measures

During the planning and design stage, a determination should be made to see if there are any known archaeological sites within the vicinity of the transportation projects. Consult with WHS compliance staff members who can be reached at 608-264-6505.

Wisconsin Historical Markers

Wisconsin historical markers identify, commemorate and honor important people, places, and events that have contributed to the state's rich heritage. The Wisconsin Historical Markers Program is a vital education tool, informing people about the most significant aspects of Wisconsin's past. The Society's Division of Historic Preservation administers the Wisconsin Historic Markers Program. Applications are required for all official State of Wisconsin historical markers and plaques. According to the Wisconsin Historical Society, nine historical markers or plaques are located within the Appleton (Fox Cities) TMA (Map 16-7, Inserts B, D-G, Appleton, Neenah/Menasha and Table 16-7).¹⁷³

Table 16-7: Wisconsin Historical Markers within the Appleton (Fox Cities) TMA

Map Identifier	Municipality	Name	Location
1	C. Appleton	Vulcan Street Plant Replica	530 Vulcan Street
2	C. Appleton	First Electric Street Railway	807 S. Oneida Street
3	T. Greenville	South Greenville Grange No. 225	Highways BB & 76
4	C. Kaukauna	Revolutionary War Veterans	Thelan Park
5	V. Little Chute	Treaty of the Cedars	Highway 96
6	C. Menasha	Wisconsin Central Railroad	Menasha Motel, Main and Mills streets ¹⁷⁴
7	T. Menasha	Butte des Morts – Fritse Park	Little Lake Butte des Morts
8	T. Menasha	Fox-Irish Cemetery	9088 Clayton Avenue
9	C. Neenah	Wisconsin Avenue Commercial Historic District – Interior walkway	135 W. Wisconsin Avenue

Source: http://www.wisconsinhistory.org/pdfs/hp/HPR-Marker-List.pdf. Revised 9/16/13

¹⁷¹ Comments received by email correspondence with Wisconsin Historical Society, 3/25/15.

Comments received by email correspondence with Wisconsin Historical Society, 4/3/15.

http://www.wisconsinhistory.org/pdfs/hp/HPR-Marker-List.pdf. Revised 9/16/13.

The Wisconsin Central Railroad Historical Marker has been temporarily relocated. The Hotel Menasha was demolished in 2014 and at the time of this writing, the plaque has not been relocated to a permanent site.

Mitigation Issues and System Level Mitigation Measures

During the planning and design stage, a determination should be made to see if there are any historical markers within the vicinity of the transportation projects. System level analysis identifies the following projects within proximity to historical markers:

- Project 14: Broad Street/Tayco Racine, Reconstruction
- Project 24: Lawe St / Power Canal Bridge
- Project 52: Lake Street/Railroad Butte, Reconstruction
- Project 54: Clayton Ave / East Shady Fairview, Reconstruction
- Project 92: USH 10 Waupaca Menasha, NCL STH 441

Cemeteries

A listing of cemeteries was obtained from ECWRPC 2010 land use¹⁷⁵ and compared against Rootsweb, an online directory. Cemeteries are shown on **Map 16-7**, **insets A-G and Appleton and Table 16-8**. According to our records, 36 cemeteries are present within the Appleton TMA. Other types of burial sites include unmarked historic graves and Native American mounds; consult the ASI for a full list of burial sites within any given project area.¹⁷⁶

http://www.rootsweb.ancestry.com/~wiwinne2/cemeteries.html. Accessed 9/23/14.

Email correspondence with Wisconsin Historical Society, 3/25/15.

Mitigation Issues and System Level Mitigation Measures

Map 16-7, **Insets A-G**, **and Appleton**, shows the transportation projects in relation to the cemeteries found within the 2010 land use. Some spot level locations may have projects in close proximity to cemeteries. These projects may require consideration in the design and construction permitting process. For additional information, consult WisDOT's *Guide to Transportation Archaeology*. ¹⁷⁷

According to a visual review of the maps, the following the projects that are within proximity of cemeteries:

- Project 3: STH 441, USH 41 USH 4, Road Maintenance
- Project 7: USH 10, USH 41 Oneida Street, Reconstruction, Expansion
- Project 8: USH 41/Appleton Green Bay CTH J- Orange Lane, Resurfacing
- Project 9: I-41 Conversion / State Line Green Bay, SCL Dodge Co I-43 Signing
- Project 44: Lincoln Ave/Wilson Vandenbroek, Extension of Lincoln Ave
- Project 45: Main Street/Vandenbroek Intersection, Realignment
- Project 50: Kimberly Trail / CE Trail Railroad, Bike / Ped Trail
- Project 53: Airport Road/Racine –STH 47, Reconstruction
- Project 73: CTH BB/USH 41 Bartell, Reconstruction, 4-Lane, Urban
- Project 81: STH 76 / USH 41 CTH JJ, Reconstruct
- Project 82: STH 76/STH 15 CTH JJ, Recondition
- Project 85: STH 96 / Washington Claribel, Reconstruct
- Project 87: STH 47, Appleton Bonduel, CTH JJ NCL
- Project 88: USH 41 Hwy Rehab
- Project 89: USH 41 / WIS 15 CTH J, Road Maintenance
- Project 90: USH 41 / USH 10 USH 41, Resurface

Museums, Libraries, and Other Historic and Cultural Resources

Museums

Museums protect valuable historic resources for community enjoyment. Residents are welcome to learn from the exhibits and amenities they have to offer (**Map 16-7**, **Insert A-H**). Museums within the Appleton (Fox Cities) TMA include:

Outagamie County:

- Charles A. Grignon Mansion or "The Mansion in the Woods" is located at 1313
 Augustine Street in Kaukauna. It is owned and operated by the Friends of the Grignon
 Mansion. Charles A. Grignon built this elegant Mansion at a natural portage point along
 the Fox in 1837.¹⁷⁸
- **Hearthstone Historic House Museum**¹⁷⁹ is located at 625 W. Prospect Avenue, Appleton. The mansion was built between 1881 and 1882. On September 30, 1882, it became the first house in the United States to be lit with Edison incandescent lamps with

Historic name Henry J. Rogers and Cremora House.

electricity that was generated by a central hydroelectric power station using the Edison system. The Hydro Adventure Center housed in the mansion offers hands-on experience in operating a model of the earliest central hydroelectric station.¹⁸⁰

- History Museum at the Castle is located at 330 E. College Avenue, Appleton. The
 mission of the museum is to inspire appreciation for the rich history of the Fox River
 Valley area communities through the collections, exhibits and education at The History
 Museum at the Castle. Owned and operated by the Outagamie County Historical
 Society, The History Museum holds the collections representing the history of the Fox
 Valley dating back to 1840s.¹⁸¹
- International Softball Congress Hall of Fame (ISCHF) is located at 515 W. Kimberly Avenue in Kimberly, it features fast pitch softball memorabilia and plaques of the ISCHF inductees.
- **Paper Discovery Center** is located at 425 W. Water Street in Appleton; it is home to the Paper Industry International Hall of Fame. 182
- The Building for Kids Children's Museum is located at 100 W. College Avenue, Appleton provides, according to their website, exceptional learning opportunities that are innovative, deeply engaging, and long-lasting.¹⁸³
- Trout Museum of Art is located at 111 W. College Avenue Street, Appleton. The
 museum formally, the Appleton Art Center Art Center, provides exhibitions, educational
 programming and special events such as the annual Art in the Park artist exhibitor
 festival, lectures, workshops, family fun days, musical concerts and an annual exhibit for
 local artists.¹⁸⁴

Winnebago County:

- Barlow Planetarium is located at 1478 Midway Road in Menasha at the University of Wisconsin Fox Valley.¹⁸⁵
- Bergstrom-Mahler Museum of Glass is located at 165 N. Park Avenue in Neenah. The
 museum houses a collection of glass paperweights and an exquisite collection of
 ceramic, Victorian and contemporary art glass.¹⁸⁶
- **Doty Cabin in Doty Park** is located at 701 Lincoln St., Neenah.
- Octagon House is located at 343 Smith Street in Neenah.¹⁸⁷

- R. Harder Gallery of Gems and Minerals is located at 24 Jewelers Park in Neenah.
- Tayco Street Bridge Tower Museum is located at Tayco & Main Streets in Menasha.
- Velte History Exhibit City Hall, Neenah.
- Weis Earth Science Museum is located at 1478 Midway Road in Menasha at the University of Wisconsin Fox Vallev. 188

Libraries

All libraries in the Appleton (Fox Cities) TMA are part of a federated library system. Federated library systems are designed to provide expanded library services to more people without making additional large expenditures. Parts of three library systems service the population within the TMA. The Calumet County portion of the TMA is part of the Manitowoc-Calumet Library System. 189 This system was jointly formed by Manitowoc and Calumet counties and is comprised of six public libraries: Kiel, Manitowoc, and Two Rivers in Manitowoc County, and Brillion, Chilton, and New Holstein in Calumet County. There are no member libraries found within the TMA. The Winnebago County portion of the TMA is part of the Winnefox Library System. 190 This system was jointly formed by Fond du Lac, Green Lake, Marquette, Waushara and Winnebago counties. The system is comprise of 30 public libraries: Brandon, Campbellsport, Fond du Lac, North Fond du Lac, Oakfield, and Ripon in Fond du Lac County; Berlin, Green Lake, Kingston, Markesan and Princeton in Green Lake County; Endeavor, Montello, Neshkoro, Oxford, Packwaukee and Westfield in Marquette County; Coloma, Hancock, Pine River, Plainfield, Poy Sippi, Redgranite, Wautoma and Wild Rose in Waushara County: and Menasha. Neenah. Omro. Oshkosh and Winneconne in Winnebago County. The Outagamie portion of the TMA is part of the OWLS Library System. 191 This system was jointly formed by Outagamie and Winnebago counties. The system is made up of 17 public libraries: Appleton, Black Creek, Hortonville, Kaukauna, (Kimberly) James J. Siebers Memorial, (Little Chute) Gerard H. Van Hoof Memorial, (Seymour) Muehl, and Shiocton in Outagamie County and Clintonville, (Fremont) Neuschafer, Iola Village, (Manawa) Sturm Memorial, Marion, New London, Scandinavia, Waupaca Area, and Weyauwega in Waupaca County.

Public libraries within the TMA include:

- Appleton Public Library (OWLS Library System), 225 N. Oneida Street, Appleton
- Kaukauna Public Library (OWLS Library System), 111 Main Avenue, Kaukauna
- (Kimberly) James J. Siebers Memorial Library (OWLS Library System), 515 West Kimberly Avenue
- (Little Chute) Gerard H. Van Hoof Memorial Library (OWLS Library System), 625 Grand Avenue, Little Chute

http://www.winnefox.org/ The Winnebago County portion of the City of Appleton is included in the OWLs Library

http://owlsnet.org/.

- (Menasha) Elisha D. Smith Public Library (WinneFox Library System), 440 First Street, Menasha
- Neenah Public Library (WinneFox Library System), 240 East Wisconsin Avenue, Neenah

Other Historic and Cultural Resources

Besides museums and public libraries, other cultural resources are present in the Appleton TMA. These include a windmill, trains and trolleys, band shells, auditoriums, memorials and statues honoring veterans and others, public and private art such as murals, zoos, sculptures and fountains and a host of other resources too numerous to list. A few specific resources include:

• Fox Cities Performing Art Center (PAC), 400 W. College Avenue, Appleton

Mitigation Issues and System Level Mitigation Measures

During the planning and design stage, a determination should be made to see if there are any museums, libraries or other historic and cultural resources within the vicinity of the transportation projects. Transportation projects near historic buildings and other edifices may have to exercise caution so as not to damage these more fragile structures during construction. System level analysis identifies the following projects within proximity to museums, libraries and other identified historic and cultural resources:

- Project 2: STH 125/USH 41 STH 47, Resurface
- Project 9: I-41 Conversion / State Line Green Bay, SCL Dodge Co I-43 Signing
- Project 12: Kimberly Ave/Railroad Marcella, Reconstruction
- Project 14: Broad Street/Tayco Racine, Reconstruction
- Project 25: Prospect Ave / Jackman St Overhead
- Project 44: Lincoln Ave/Wilson Vandenbroek, Extension of Lincoln Ave
- Project 45: Main Street/Vandenbroek intersection, Realignment
- Project 51: Railroad Street/3rd Maes, Bike/Ped Trail

Table 16-9 Appleton (Fox Cities) TMA Long Range Projects and Environmental/Cultural Features provides a summary level analysis of each of the environmental features mentioned within this chapter and shows which TIP projects (for 2015-2018) are impacted by their development. Please note, the full TIP project descriptions/names can be found in Table 14-1 of the Recommendations Chapter which corresponds to the numbered projects listed here. For each environmental feature, the full list of TIP recommended projects were analyzed, documenting where projects intersected the quarter mile and 250 foot buffer zones. This analysis was completed using GIS and is included below.

CHAPTER 17 – STATE AND LRTP COORDINATION

TABLE OF CONTENTS

State and LRTP Coordination	17-	-1	

CHAPTER 17: STATE AND LRTP COORDINATION

Federal and state legislation require WisDOT to develop a statewide long range transportation plan. Federal legislation (MAP-21) requires each state to coordination with local TMAs to complete similar long range transportation/land use plans to be eligible for state and federal funding for transportation related projects. MAP-21 places greater emphasis on improving safety, maintaining infrastructure condition, reducing traffic congestion, system reliability, freight movement and economic vitality, environmental sustainability, performance measures and reducing project delivery delays from previous legislation. State legislation, specifically the comprehensive planning law (Section 66.1001, Wis. Stats.) focuses on improving communication within and among jurisdictions to make more informed decisions that result in smart growth.

Connections 2030, Wisconsin's long range transportation plan (LRTP) as well as the *Wisconsin Rail Plan 2030* envision an integrated multimodal transportation system that maximizes the safe and efficient movement of people and products throughout the state, enhancing economic productivity and the quality of Wisconsin's communities while minimizing impacts to the natural environment. Both of these plans and this LRTP for the TMA will help the state maintain and enhance its transportation system to meet the needs of the 21st century and fulfill the state's transportation vision. The focus is on maintaining and enhancing that system to support future mobility and economic growth.

Connections 2030 sets the foundation for Wisconsin's transportation system with an emphasis on:

- safety and security;
- · preserving the existing and future system;
- optimizing investment in the system for continued safety, enhanced mobility and efficiency;
- responding to local, regional, national and international economic trends to maintain state economic competitiveness;
- considering environmental issues to maintain Wisconsin's quality of life; and
- providing users with transportation choices.

The Appleton (Fox Cities) TMA's long range plan's vision, goals and objectives support the Wisconsin's *Connections 2030*, LRTP's vision and emphasis. Throughout the transportation planning process the TMA continuously works with WisDOT to ensure coordination between agencies. It is through this process that LRTP are implementable and successful at all levels of government.

CHAPTER 18: FINANCIAL ANALYSIS

INTRODUCTION

This portion of the LRTP provides a general overview of the local, state and federal expenditures and anticipated revenues required to fund the metropolitan planning process over the life of the plan (35 year plan horizon to 2050). A financial capacity analysis is required by MAP-21 to show that metropolitan area transportation plans are fiscally constrained. Specifically, the financial plan requirement is addressed in Section 134 of Title 23, United States Code (E):

- ``(E) Financial plan.--
- ``(i) In general.--A financial plan that—
- ``(I) demonstrates how the adopted transportation plan can be implemented;
- ``(II) indicates resources from public and private sources that are reasonably expected to be made available to carry out the plan; and
- ``(III) recommends any additional financing strategies for needed projects and programs.
- ``(ii) Inclusions.--The financial plan may include, for illustrative purposes, additional projects that would be included in the adopted transportation plan if reasonable additional resources beyond those identified in the financial plan were available.
- ``(iii) Cooperative development.--For the purpose of developing the transportation plan, the metropolitan planning organization, transit operator, and State shall cooperatively develop estimates of funds that will be available to support plan implementation.

To complete a financial analysis of local expenditures for the Appleton (Fox Cities) TMA, financial expenditures data was used as part of the published report from the Wisconsin Department of Revenue's (DOR) County and Municipal Revenues and Expenditures reports. State and federal transportation expenditures and revenues were taken from ECWRPC's annual Transportation Improvement Program (TIP) from 2010 – 2014.

Local Financial Analysis

Local expenditures were gathered for the Appleton (Fox Cities) TMA municipalities from 2008 to 2012 to provide a historic pattern of local transportation expenditures. This analysis looked at the following local transportation expenditures which are defined by the DOR¹:

 Highway Maintenance and Administration: includes operating expenditures and capital outlay for engineering, highway equipment and buildings, and highway maintenance. In counties, this entry will include depreciation for equipment and buildings.

¹ http://www.revenue.wi.gov/report/m.html. (9/3/14)

- **Highway Construction:** includes the operating expenditures and capital outlay for constructing highways.
- Road Related Facilities: include operating expenditures and capital outlays for limited purpose roads, street lighting, sidewalks, storm sewers, and parking facilities.
- Other Transportation: includes operating expenditures and capital outlays for airports, mass transit, docks and harbors, and other transportation facilities.

State and Federal Financial Analysis

State (WisDOT) and federal (FHWA and FTA) expenditures were gathered from ECWRPC's short range Transportation Improvement Program (TIP) for the five year period from 2010-2014 using the year of expenditure dollar amounts. WisDOT expenditures included both preservation and expansion project dollars. Federal funding expenditures included the following sources:

- National Highway System
- Bridge Replacement/Rehab
- Surface Transportation Program Fond du Lac Urbanized Area
- Surface Transportation Program State Flexibility
- Surface Transportation Program (Highway Safety Improvement Program)
- Surface Transportation Program Enhancements
- Section 5307 Operating Funds
- Section 5307 Capital Funds

ESTIMATED LONG RANGE FINANCIAL NEED

Local Expenditures/Revenues

The estimated long range financial need for local TMA expenditures was calculated using the following steps:

- 1. Gathered local expenditures for Highway Maintenance and Administration, Highway Construction, Road Related Facilities and Other Construction for the local municipalities (2008-2012) provided by the DOR. Please reference **Table 18-1**.
- 2. To account for a degree of variation in local transportation spending projects in a given year by municipalities, a 5-year average value of total local expenditures was calculated. These 5-year average values were used to derive the total average amount of local transportation expenditures.
- 3. To account for projected revenues needed over the life of this plan, it was assumed that local transportation expenditures must at a minimum be the amount of revenue needed to be fiscally constrained (i.e. expenditures should equal revenues). The calculated 5-year average of expenditures was used to estimate expenses for the life of the plan. An inflation factor of 2.3 percent (provided by WisDOT) was applied to the 2008-2012 annual average expenses for each municipality and compounded for each year out to 2050. This data was then grouped by 5 year increments as shown in **Table 18-2**.

WisDOT Expenditures/Revenues

The estimated long range financial need for WisDOT TMA expenditures was calculated using the following steps:

- 1. Gathered preservation and expansion project expenditures from the TMA's TIP (2010-2014-year of expenditure dollars) provided by ECWRPC. Please reference **Table 18-3**.
- To account for a degree of variation in local transportation spending projects in a given year by WisDOT, a 5-year average value of total local expenditures was calculated. These 5-year average values were used to derive the total average amount of WisDOT MPO transportation expenditures.

To account for projected revenues needed over the life of this plan, it was assumed that WisDOT transportation expenditures must at a minimum be the amount of revenue needed to be fiscally constrained (i.e. expenditures should equal revenues). The calculated 5-year average of expenditures was used to estimate expenses for the life of the plan. An inflation factor of 2.3 percent (provided by WisDOT) was applied to the 2010-2014 annual average expenses and compounded for each year out to 2050. This data was then grouped by 5 year increments as shown in **Table 18-5**.

Table 18-3: Historic Expenditures for WisDOT (dollars) (2010 – 2014)

WisDOT	2014	2013	2012	2011	2010	5-Year Average

Federal Highway Administration (FHWA) and Federal Transit Administration (FTA) Expenditures/Revenues

The estimated long range financial need for FHWA and FTA TMA expenditures was calculated using the following steps:

- 1. Gathered federal expenditures from the TMA's TIP (2010-2014) provided by ECWRPC. Please reference **Table 18-4**.
- To account for a degree of variation in local federal transportation spending projects in a
 given year by FHWA and FTA, a 5-year average value of total local expenditures was
 calculated. These 5-year average values were used to derive the total average amount
 of FHWA and FTA MPO transportation expenditures.

To account for projected revenues needed over the life of this plan, it was assumed that FHWA and FTA transportation expenditures must at a minimum be the amount of revenue needed to be fiscally constrained (i.e. expenditures should equal revenues). The calculated 5-year average of expenditures was used to estimate expenses for the life of the plan. An inflation factor of 1.0 percent (provided by WisDOT) was applied to the 2010-2014 annual average expenses and

compounded for each year out to 2050. This data was then grouped by 5 year increments as shown in **Table 18-5**.

Source: Transportation Improvement Program (2010 – 2014)

Note: Using the assumptions outlined within this chapter, the Appleton (Fox Cities) TMA (over the life of this plan at a 35 year horizon) will utilize approximately **\$1.5 billion** in funding sources/revenues from local municipalities (\$952,223,604), (\$268,936,555) from WisDOT, (\$265,769,289) from FHWA and (\$15,503,627) from FTA. As forecasting needs into the future are relatively uncertain, it will be important to revisit funding calculations when this plan is updated on a five year basis (2020 will be the next update to this plan).

PUBLIC INFORMATION MEETING COMMENTS

APPENDIX B: PUBLIC INFORMATION MEETING COMMENTS

PUBLIC MEETING COMMENTS

A public information meeting was held on Thursday, April 23, 2015, at the University of Wisconsin-Fox Valley (Emeritus Room) from 4:00pm to 6:00pm; which was attended by eight members of the general public. No major comments/concerns were received.

A second public information meeting was held on Wednesday, October 21 2015, at the East Central Wisconsin Regional Planning Commission from 4:00pm to 6:00pm; which was attended by 12 members of the general public.

ECWRPC Staff Outreach Efforts

Throughout the planning process staff completed the following to further gather public input (for survey distribution and promotion of public information meeting/open house:

- Setting up survey link on Fox Cities-Oshkosh MPO website: http://fcompo.org/
- Setting up survey link on ECWRPC website: http://www.ecwrpc.org/
- Creating survey business cards with web link and a smartphone QR code for more convenient access
- Emailing TMA Transportation and TAC committee members to garner participation in survey
- Emailing and/or mailing all municipal clerks within the TMA to promote the survey in paper and digital formats
- Attending Winnebagoland Housing Coalition meetings on 4/2/14, 5/7/14, 9/3/14 and 2/4/15
- Attending Hispanic Interagency meetings on 4/3/14, 5/1/14, 9/4/14, 2/4/15 and 4/2/15
- Attending Hmong American Partnership meetings on 4/15/14, 4/17/14, 6/19/14 and 9/4/14
- Distributing survey through Well City Fox Cities list of businesses
- Mindmixer social media outreach service (additional outreach for ECWRPC)
- Promotion of surveys at the Greater Winnebago Advocacy on Mobility on 9/4/14
- Promotion of surveys at the Sustainability Networking Fair (hosted at UW-Fox Valley) on 4/28/14

- Promotion of surveys at ECWRPC mini-conference in Kimberly (hosted at Liberty Hall) on 4/25/14
- Promotion of surveys at the Appleton (Fox Cities) TMA and Oshkosh MPO Bike and Pedestrian public information meetings on 7/29/14 and 7/30/14
- ECOS-FV meetings on 4/3/14
- City of Menasha Sustainability Board meeting on 4/15/14
- Fox Cities Housing Coalition meetings on 4/15/14 and 6/18/14
- Emailing ESTHER (interfaith social justice organization serving the Fox Valley) and United Way of the Fox Cities to promote survey
- Attending and distributing surveys at "Fox Cities Celebrate Diversity Picnic" (7/19/14)
- Promotion of 4/23/15 Public Information Meeting/Open House from staff at 2/17/15 and 2/18/15 meetings
- Staff provided Casa Hispanic with surveys to distribute at their offices (2/4/15)
- Promotion of Public Information Meeting postcards with ESTHER transit group members (2/9/15)
- Promotion of Public Information meeting via email by ESTHER President Penny Robinson (2/9/15)
- Promotion of 4/23/15 Public Information Meeting/Open House for the LRTP in ECWRPC printed newsletter in March 2015.
- Promotion of 4/23/15 Public Information Meeting/Open House for the LRTP in ECWRPC Constant Contact Account (digital email/marketing program) (3/4/15); sent an e-news blast to transportation contacts
- Promotion of 4/23/15 Public Information Meeting/Open House for the LRTP in ECWRPC and Fox Cities-Oshkosh MPO events calendars on their respective websites
- Presentation of Environmental Mitigation Chapter (cultural resources section) of LRTP to the City of Neenah Landmarks Commission on 3/10/15 to gather their input on items/maps
- Presentation of Environmental Mitigation Chapter (cultural resources section) of LRTP to the City of Menasha Landmarks Commission on 3/11/15 to gather their input on items/maps

- Presentation of Environmental Mitigation Chapter (cultural resources section) of LRTP to the City of Appleton Landmarks Commission on 3/17/15 to gather their input on items/maps
- Promotion of 4/23/15 public information meeting/open house for the LRTP at City of Menasha Sustainability Board
- Promotion of 4/23/15 public information meeting/open house for the LRTP at the Fox Cities Housing Coalition meeting on 3/18/15
- Promotion of 4/23/15 public information meeting/open house for the LRTP at the Hmong American Partnership meeting on 3/19/15
- Promotion of 4/23/15 public information meeting/open house for the LRTP on weekly publication for the Fox Cities Housing Coalition during the week of 4/13/15
- Attended Appleton Green Market on 9/12/15 to hand out survey cards and paper surveys; staff make contact with 8 individuals and received surveys from 6 individuals

Comments Received from the Wisconsin Historical Society Regarding Environmental Mitigation Chapter

Thank you for giving us the opportunity to comment on the 2015-2050 Long Range Transportation/Land Use Plan for Oshkosh. We have the following comments:

- Page 56 Our official division title is the Division of Historic Preservation and Public History (HPPH). The SHPO is housed within this Division.
- Please include a note somewhere about needing to consult with WisDOT's Cultural Resources Team (CRT) in the Bureau of Technical Services. For projects that require review under Section 106, the CRT is the single point of contact and all 106 review materials come to SHPO through the CRT.
- Page 57 While the WHS website does display National Register listings, eligibility information for those not yet listed, in progress, or determined not eligible is not publicly available. Please contact the HPPH for information on how to gain access to all of the data.
- Page 59 Mitigation Measures for Archaeological Sites It may be helpful here to mention that archaeological sites, as with the buildings, need to be evaluated for significance and integrity.
 WisDOT's CRT, the Office of the State Archaeologist and the SHPO can help archaeological consultants with that.
- Page 60-61 Please make it clear that cemeteries are not the only burial sites within any given project area. Other types of burial sites include unmarked historic graves and Native American mounds. All burial sites are protected under Wis. Stats. § 157.70 and Wis. Admin. Code § HS 2.04 and you must obtain permission from the SHPO prior to any ground disturbing activity within the boundaries of the burial site. Information on the process as well as the Request to Disturb a Burial Site form are located on our website at wisconsinhistory.org. Consult the ASI for a full list of burial sites within any given project area.

Thank you,

Kimberly Zunker Cook

Comments received from the Wisconsin Department of Natural Resources (3/31/15):

Good morning Kolin,

Thank you for the opportunity to comment on the documents referenced above. I thought they were will done and will offer valuable information to the other transportation stakeholders. One suggestion that came to mind as I went through each document was plainly stating the importance of considering the impacts of development on storm water flow. You may be aware that Eric and Joe are working with me, DOT, the town of Empire, and people who reside at or near Lake DeNeveu. It is alleged that development of the subdivision on top of the ledge has resulted in significant changes in storm water flow which delivers increased sediment and nutrients to the lake.

The MPOs may be a good place to remind stakeholders to consider how their seemingly isolated project could have impacts on other individuals or environmental resources in the watershed. I believe a comment of this nature fits well with the other information contained in the documents. Nice work,

We are committed to service excellence.

Visit our survey at http://dnr.wi.gov/customersurvey to evaluate how I did.

Comments Received from the City of Appleton (4/24/15):

Good Afternoon Kolin,

Karen Harkness shared your letter and materials on the Environmental Mitigation Chapter of the Long Range Transportation Plan for the Appleton (Fox Cities) TMA. We circulated this information to various City staff and compiled the comments listed below.

- The Policy Content section states that "the Shoreland/Wetlands Regulations Ordinance has not been developed at this time" for the City. However, our Shoreland Zoning Ordinance was adopted in 2014 (Chapter 23, Article XIX of the Municipal Code).
- Department of Public Works staff have a detailed wetland inventory map that is used for WDNR reporting. Attached is a .pdf file of the latest version. We could also provide the GIS data, if necessary for Map 16-4.
- Kathy Thunes was provided with comments on the "cultural resources" component when she presented at a recent Historic Preservation Commission meeting.

We hope this feedback proves beneficial. If you have any questions or concerns, please let me know.

Hope all is well,

Dave

Comments Received from the Department of Agriculture, Trade and Consumer **Protection (4/7/15):**

Hi Kolin,

Thank you for the opportunity to allow the Department of Agriculture, Trade, and Consumer Protection (DATCP) to participate in the review of the draft Environmental Mitigation Chapter of the Oshkosh MPO 2015-2050 Long Range Transportation Plan. Our review comments are provided on pages 29 and 30 of the attached draft chapter. Please contact us with any questions or concerns.

We appreciate you continued invitation to provide feedback in the development of this and future LRTP's.

Thank you, **Lindsay Tekler**

East Central Wisconsin Regional Planning CommissionLong Range

The East Central Wisconsin Regional Planning Commission (ECWRPC) is the designated Metropolitan Planning Organization (MPO) for the Appleton (Fox Cities) and Oshkosh Urbanized Areas and staff for the Fond du Lac MPO. ECWRPC will spend the next year developing Long Range Transportation Plans to guide the direction of the future transportation network in these areas. We are seeking input from all members of our communities to help create plans that consider the diverse needs of all our residents. Your confidential responses to this survey are greatly appreciated. Please take 5 to 10 minutes to answer the questions below.

1.	What	is	vour	county	of re	esidence?
----	------	----	------	--------	-------	-----------

- Calumet County
- Fond du Lac County
- Outagamie County
- Winnebago County
- Other (please specify)

2. What is your municipality of residence? (example: City of Appleton, Village of Little Chute, Town of Greenville)

3. How far is your commute to work? (if applicable)

- C Less than 1 mile
- 1 to 5 miles
- 5 to 10 miles
- O More than 10 miles
- Not Applicable

Q6 Approximately how often do you use your bicycle in the summer?

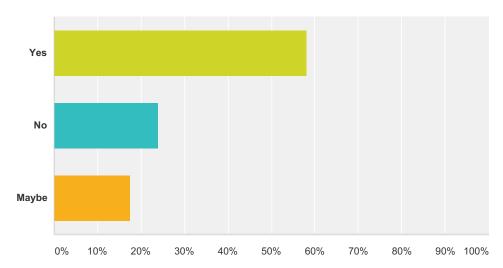

Answer Choices	Responses	
Weekly	29.64%	83
Occasionally	23.57%	66
Daily	16.43%	46
Rarely	11.07%	31
Never	10.71%	30
Not Applicable	8.57%	24
Total		280

Q7 Would you bicycle and/or walk more if additional bicycle and pedestrian facilities were available?

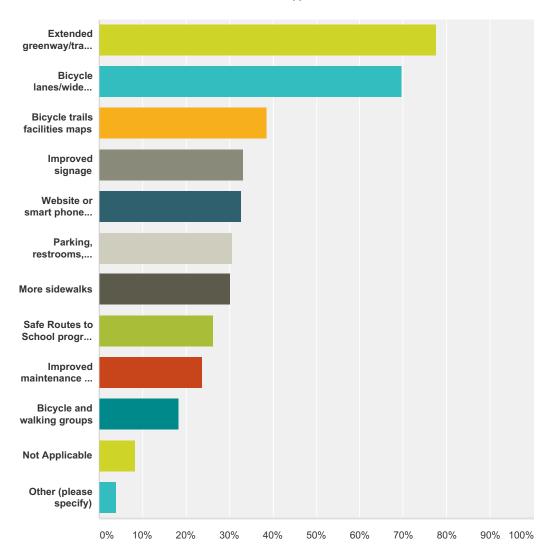

Answered: 278 Skipped: 5

Answer Choices	Responses	
Yes	58.27%	162
No	24.10%	67
Maybe	17.63%	49
Total		278

Q8 If you answered 'yes' to the previous question, which of the following would be helpful to you? (Check all that apply)

Answered: 202 Skipped: 81

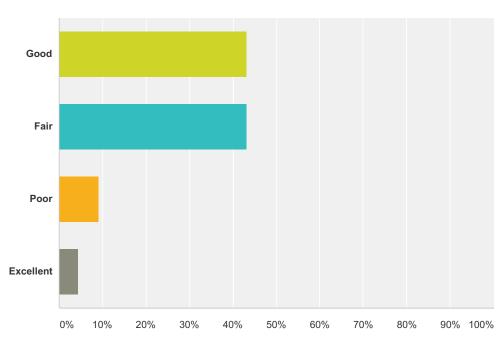

Answer Choices		
Extended greenway/trail system	77.72%	157
Bicycle lanes/wide outside lanes	69.80%	141
Bicycle trails facilities maps	38.61%	78
Improved signage	33.17%	67
Website or smart phone applications for bicycle/trail accommodations	32.67%	66
Parking, restrooms, water fountains, benches	30.69%	62
More sidewalks	30.20%	61

Safe Routes to School programs for children (http://eastcentralsrts.org/)	26.24%	53
Improved maintenance of existing facilities	23.76%	48
Bicycle and walking groups	18.32%	37
Not Applicable	8.42%	17
Other (please specify)	3.96%	8
otal Respondents: 202		

#	Other (please specify)	Date
1	Bicycling is my preferred method of travel, but the auto drivers in Oshkosh prevent me from feeling safe to do it much. Bikes DO NOT belong on the sidewalks, they are vehicles - and they belong on the roads! Auto drivers need to be made aware of that.	7/26/2015 7:00 PM
2	Something to encourage businesses to install bike lockers. Also something to encourage businesses to have locker rooms/shower facilities available	5/8/2015 10:37 PM
3	extend bike trail on County A through to Oshkosh and Neenah	4/24/2015 10:54 AM
4	If the disenfranchised living in Winnebago County were given control over how the money is spent.	11/30/2014 2:03 PM
5	Safe routes through highway underpasses	7/24/2014 2:56 PM
6	Separate bicycle path from vehicle traffic with parking lanes, Clear main bicycle routes specifically after snowfalls, Sweep bicycle paths in spring (to clear of nails and other debris), bridge designed for bike/ped traffic exclusively	5/11/2014 3:37 PM
7	again, more sidewalks. this town is notorious for their absence, and those that are there often just stop, with a fence or a building in the way. we don't need more park walkways - we need plain old sidewalks all over town, so that everyone can walk, and not just people in parks. this is not a walker's town, except for the immediate downtown area. thank you!!	4/28/2014 11:59 PM
8	Bicycle lockers	4/7/2014 4:19 PM

Q9 Overall, how would you rate the transportation system in your municipality?

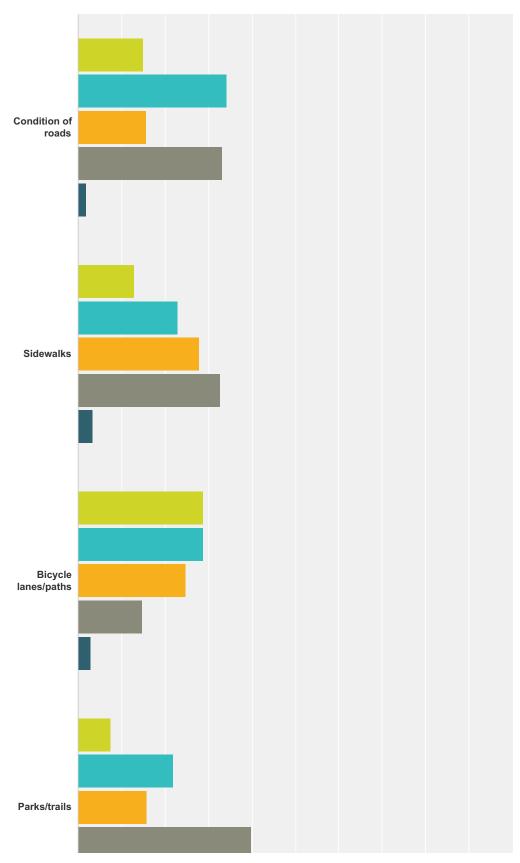

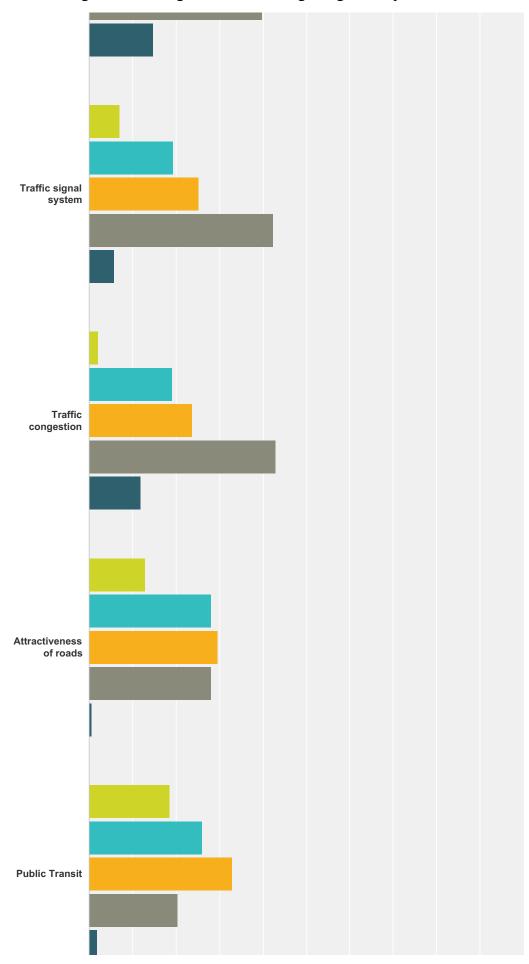

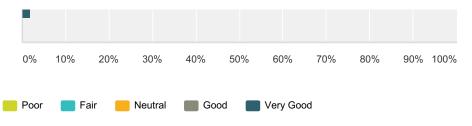

Answer Choices	Responses	
Good	43.27%	119
Fair	43.27%	119
Poor	9.09%	25
Excellent	4.36%	12
Total		275

Q10 How would you rate the following in your municipality?

Answered: 280 Skipped: 3

	Poor	Fair	Neutral	Good	Very Good	Total
Condition of roads	15.00%	34.29%	15.71%	33.21%	1.79%	
	42	96	44	93	5	28
Sidewalks	12.95%	23.02%	28.06%	32.73%	3.24%	
	36	64	78	91	9	27
Bicycle lanes/paths	28.78%	28.78%	24.82%	14.75%	2.88%	
	80	80	69	41	8	27
Parks/trails	7.55%	21.94%	15.83%	39.93%	14.75%	
	21	61	44	111	41	27
Traffic signal system	7.19%	19.42%	25.18%	42.45%	5.76%	
	20	54	70	118	16	2
Traffic congestion	2.17%	19.13%	23.83%	42.96%	11.91%	
	6	53	66	119	33	2
Attractiveness of roads	13.04%	28.26%	29.71%	28.26%	0.72%	
	36	78	82	78	2	2
Public Transit	18.68%	26.01%	32.97%	20.51%	1.83%	
	51	71	90	56	5	2

Q11 Please list up to five transportation improvements you would like to see in your municipality. Suggestions may be general and/or specific to intersections or street corridors (examples: roundabouts, bike lanes)

Answered: 226 Skipped: 57

Answer Choices	Responses	
a.	100.00%	226
b.	84.07%	190
C.	58.85%	133
d.	38.50%	87
е.	25.22%	57

#	a.	Date
1	We have a nice bike/walking trail thru town, but I can't get anywhere else without traveling down some pretty busy roads. I pull my son in a trailer and regardless, bikes and cars don't mix well these days. So, link up all the trails and get us off the roads	8/3/2015 2:37 PM
2	Bus stops are not conveniently located. They should drop off/pick up closer to stores, medical facilities, etc.	7/27/2015 7:02 PM
3	Light rail!	7/27/2015 6:08 PM
4	Bike lanes	7/27/2015 4:04 PM
5	Bike paths in the city; bike lanes can be very dangerous as they often force the cyclist in between moving traffic and parked cars	7/27/2015 1:14 PM
6	More extensive biking/walking path system throughout city	7/27/2015 8:42 AM
7	Better availability - operate longer	7/27/2015 6:33 AM
8	a way to get to Milwaukee	7/27/2015 5:34 AM
9	Commuter rail between cities	7/27/2015 5:26 AM
10	Trails alongside the lot-lines of farmers fields	7/27/2015 2:21 AM
11	More convenient bus routes	7/26/2015 11:34 PM
12	Trails for bikes and pedestrians	7/26/2015 11:32 PM
13	Longer hours!	7/26/2015 11:31 PM
14	Bike lanes throughout the city	7/26/2015 10:52 PM
15	Bike path or trails along county highway G	7/26/2015 10:02 PM
16	trails or sidewalks on irish road to the trail from American drive and Winchester rd.	7/26/2015 9:50 PM
17	protected bike lanes	7/26/2015 9:33 PM
18	Additional bike trails	7/26/2015 9:24 PM
19	Bike lanes	7/26/2015 9:17 PM
20	more bike lanes for commuting	7/26/2015 8:01 PM

C-31

21	Bike lanes	7/26/2015 7:00 PM
22	Wider sidewalks on the South side of town	7/26/2015 6:24 PM
23	crosswalk and signage for ped traffic on Algoma just W of intersection with Main	7/26/2015 5:12 PM
24	less bike lanes	7/21/2015 8:52 PM
25	longer bus hours p.m.	7/18/2015 4:34 PM
26	Bus to airports (Appleton, Milwaukee, Madison)	7/13/2015 9:31 PM
27	NO ROUNDABOUTS	7/11/2015 8:47 AM
28	longer bus hours pm	7/1/2015 10:13 AM
29	bike lanes	6/26/2015 12:41 PM
30	bike paths in fox cities	6/22/2015 1:23 PM
31	Expanded Trail System	6/16/2015 10:38 AM
32	Roundabouts make it easier for diffierent vehicles to share.	6/8/2015 2:35 PM
33	Continue adding more bike lanes and connect up the ones we have	5/8/2015 10:37 PM
34	More Roundabouts	5/8/2015 3:40 PM
35	More Bus Routes to meet the needs of employees	4/30/2015 8:31 AM

86	More bike lanes	6/13/2014 1:59 PM
87	Bike Lanes	6/12/2014 1:28 PM
88	Protected bike lanes	6/12/2014 11:12 AM
89	more roundabouts	6/11/2014 1:07 PM
90	Road reconstruction. Almost all have outlived expectancy.	6/11/2014 11:00 AM
91	Hwy 76 round a outs at G GG Breezewood	6/11/2014 7:34 AM
92	passenger rail service in eastern WI	6/9/2014 3:41 PM
93	safe bike and pedestrian access across 441from Menasha to Appleton (@Oneida, @Appleton, chain drive)	6/8/2014 8:12 AM
94	increase sensitivity of traffic lights for mopeds, they are becoming popular	6/8/2014 6:56 AM

95	Potholes	6/7/2014 11:55 PM
96	Light rail	6/7/2014 11:34 PM
97	Bike lanes	6/7/2014 11:27 PM
98	Lower tax cost	6/7/2014 10:59 PM
99	Crossing of Racine St between Main and 3rd	6/7/2014 9:55 PM
100	middle School traffic improvement	6/7/2014 9:44 PM
101	fix road on tayco and 3rd by mill	6/7/2014 9:32 PM
102	need train system	6/7/2014 9:29 PM
103	Roundabouts	6/7/2014 9:26 PM
104	Racine Street improvements	6/7/2014 9:25 PM
105	Passenger Rail Service	6/7/2014 9:23 PM
106	Train service to the big cities	6/7/2014 7:39 PM
107	North Main St. Near Murdock- Fix pot holes.	6/4/2014 11:30 AM
108	Sunday service so people can get to church and work	6/4/2014 11:29 AM
109	Bike lanes on all major roadways	6/4/2014 11:22 AM
110	More sidewalks	6/3/2014 8:45 AM
111	more bike paths\lanes	5/30/2014 10:06 AM
112	trail connections to east side of Menasha and beyond	5/28/2014 3:20 PM
113	Traffic lights at CB & Oakridge or 4 way stop	5/27/2014 7:52 PM
114	Increased Biking Lanes	5/27/2014 4:36 PM
115	Direct bus routes from Neenah to FVTC and UW Fox	5/27/2014 3:10 PM
116	I like the continued increase in bike lanes. Keep it up.	5/15/2014 12:50 PM
117	Extension of bike trail along STH 114/10	5/15/2014 12:44 PM
118	Rethink street construction so GIGANTIC pot holes do not emerge between concrete slabs	5/11/2014 3:37 PM
119	left turn arrows by Oshkosh North High School	5/9/2014 2:38 PM
120	Less Roundabouts	5/5/2014 7:44 PM
121	Spencer St is highly used for many activities from downtown to the airport and most of it does not have a sidewalk	5/5/2014 4:17 PM
122	Extended bus service hours	5/5/2014 3:28 PM
123	safety for bikes crossing or using hwy OO and Richmond St. in appleton. Very dangerous!	5/3/2014 8:14 PM
124	I would like to see non-paved trails. We have very few at this time. Paved trails, while easier to maintain, are harder on the joints and can be difficult for individuals to use who have feet and knee issues.	5/1/2014 10:48 AM
125	Change the bus route has been the same for almost 2 decades	4/29/2014 11:51 PM
126	Roundabout or lights at State Park Rd and 114	4/29/2014 8:32 PM
127	sidewalks	4/28/2014 11:59 PM
128	re-testing of adults throughout the years	4/25/2014 1:49 PM
129	bike lanes	4/25/2014 11:11 AM
130	Richmond and Franklin is a busy intersection, not easy to cross	4/25/2014 9:28 AM
131	smooth streets	4/23/2014 11:03 PM

132	More use of round abouts	4/23/2014 1:26 PM
133	Bike Lanes	4/22/2014 8:52 AM
134	Hortonville Bypass	4/21/2014 2:39 PM
135	signage	4/21/2014 10:18 AM
136	Regional transit system	4/21/2014 9:31 AM
137	Roads wide enough for bikes and pedestrians to use the side	4/21/2014 8:20 AM
138	intercity transportation options (bus)	4/20/2014 4:23 PM
139	Improve South Oneida Street corridor between Fox River and STH 114	4/18/2014 9:15 AM
140	Improve the condition of the City streets	4/17/2014 1:41 PM
141	roundabout at CE & HH	4/17/2014 11:04 AM
142	No more roundabouts!!!	4/17/2014 8:43 AM
143	bike lanes	4/17/2014 8:20 AM
144	Better upkeep of streets	4/16/2014 11:45 PM
145	Route 1: Increase service to q/30 min. 8:45AM-5:45PM	4/16/2014 9:18 PM
146	widen the roads &/or slow down the traffic	4/16/2014 4:15 PM
147	Promotion of bicycle use and trails	4/16/2014 3:42 PM
148	Widen Leonard Pt Road from 21 to Sand Pit (or create pedestrian lane)	4/16/2014 3:37 PM
149	continual bike lanes and trails	4/16/2014 3:33 PM
150	bike lanes	4/16/2014 3:06 PM
151	Improve street condition on Main St.	4/16/2014 2:40 PM
152	Bike lanes	4/16/2014 2:10 PM
153	Complete trail network	4/16/2014 1:47 PM
154	More connectedness of trail systems for biking and walking.	4/16/2014 10:53 AM
155	bus route to fringes of city	4/16/2014 10:32 AM
156	Overpass over Prospect Ave. RR tracks or better scheduling	4/16/2014 10:29 AM
157	improved public transit, more routes, longer hours	4/12/2014 10:06 PM
158	NO ROUNDABOUTSespecially double lanes; people do not drive well in those	4/11/2014 10:51 PM
159	less roundabouts	4/11/2014 8:53 PM
160	smaller more fuel efficient buses	4/11/2014 7:46 PM
161	Increased enforcement of traffic laws (speeding)	4/10/2014 4:02 PM
162	CE and Buchanan roundabouts	4/10/2014 9:13 AM
163	I am happy with current transportation in Grand Chute.	4/9/2014 6:38 PM
164	Left Turn Signal for E/W or N/S at the same time	4/9/2014 6:02 PM
165	better traffic control Ballard Rd very congested during busy times	4/9/2014 2:14 PM
166	More transportation for the disabled	4/8/2014 3:37 PM
167	energy efficient buses	4/8/2014 2:49 PM
168	high line trail crossing on CTH N	4/8/2014 2:46 PM
169	Improved roads	4/8/2014 2:15 PM

170	The Capitol Dr over 41 needs to be much wider.	4/8/2014 1:48 PM
171	Increase number of bicycle lanes - not motorized traffic lanes	4/8/2014 10:24 AM
172	road improvement	4/8/2014 8:52 AM
173	Sidewalks or bike lanes on Appleton Road between 9th St. and Midway Road!	4/8/2014 8:45 AM
174	roundabouts	4/8/2014 8:34 AM
175	bike lanes	4/8/2014 8:21 AM
176	Roundabouts need to be larger to service large trucks	4/7/2014 7:13 PM
177	public busses into appleton	4/7/2014 5:34 PM
178	more pickup spots in small communities	4/7/2014 5:23 PM
179	More public transportation routes	4/7/2014 5:23 PM
180	no more roundabouts	4/7/2014 5:15 PM
181	no more roundabouts	4/7/2014 4:20 PM
182	More bike trails	4/7/2014 4:19 PM
183	get rid of the bike lanes. I see very few bikes using them and they take up a lot of space and parking	4/7/2014 4:10 PM
184	Take out some of the roundabouts on Evergreen Road	4/7/2014 4:05 PM
185	more bike lanes	4/7/2014 3:52 PM
186	finish resurfacing Kimberly Ave.	4/7/2014 3:49 PM
187	restrooms on trails/routes	4/7/2014 3:39 PM
188	Cheaper prices for seniors	4/7/2014 3:38 PM
189	Safe bike lanes on Prospect Ave from downtown Appleton o to connect with CB	4/7/2014 3:08 PM
190	More trails for biking and walking	4/7/2014 3:07 PM
191	Bike Lanes	4/7/2014 2:58 PM
192	More bike lanes	4/7/2014 2:52 PM
193	better traffic signals	4/7/2014 2:47 PM

98	speed limit enforcement	5/30/2014 10:06 AM
99	more sidewalks	5/28/2014 3:20 PM
100	Traffic lights at CB & Oakridge or 4 way stop	5/27/2014 7:52 PM
101	More Walkable Downtown	5/27/2014 4:36 PM
102	Better shelter in Downtown Neenah, including restroom	5/27/2014 3:10 PM
103	More promotion of public transit. For example, ValleyTransit could have information table at community events like Juneteenth, Farmers Market, etc.	5/15/2014 12:50 PM
104	Enforced sidewalk policy	5/15/2014 12:44 PM
105	Bicycle routes with attraction mileage markers, some mileage markers	5/11/2014 3:37 PM
106	increased bus routes (beyond just city limits-expand to towns)	5/9/2014 2:38 PM
107	Better Speed Limit Observancemore signage	5/5/2014 7:44 PM
108	buses currently get delayed near the mall, not just in the Christmas season	5/5/2014 4:17 PM
109	Extended bus service area	5/5/2014 3:28 PM
110	bike lanes for Wisconsin Ave. in Appleton-very dangerous!	5/3/2014 8:14 PM
111	I would like to see additional education for cars, bikes, and pedestrians on how to stay safe on the road. I think it is completely ridiculous that City of Appleton decided it should make bikers go out of their way to ride north or south of College Ave and not provide a bike lane on College because cars are not alert enough. In my opinion,	5/1/2014 10:48 AM
	this position is evidence that the City is not interested in really looking at the underlying issue of giving all forms of transportation equal rights.	
112		4/29/2014 11:51 PM

42	Pedestrian trail for CUSA/RUSA/Outlet Mall	7/23/2014 7:08 AM
43	more bicycle trails/lanes between municipalities esp. Cty A between Oshkosh and Neenah	7/21/2014 7:15 AM
44	Offer sidewalk or bike lane (all roads)	7/8/2014 9:35 AM
45	signage at all crossings	7/8/2014 7:57 AM

46	better signage	7/7/2014 5:54 PM
47	More bike parking options	7/7/2014 9:39 AM
48	more trails along 114	7/1/2014 8:57 PM
49	CONGESTION LAKE BREEZE ST TO GET OUT ON 114	6/28/2014 7:39 PM
50	A safer, outlined way to get to other areas of Sherwood from the Sherwood Forest subdivision.	6/26/2014 8:12 PM
51	create more east west roads in village	6/26/2014 4:26 PM
52	roads	6/24/2014 6:05 PM
53	Bike Lane or sidewalk along Hwy 96	6/22/2014 8:24 PM
54	Rebuild New York Ave west of Main St.	6/19/2014 5:30 AM
55	more sidewalks	6/16/2014 2:41 PM
56	Improve local road with large pot holes	6/13/2014 1:59 PM
57	Bike sharing stations like b-cycle in Madison	6/12/2014 11:12 AM
58	more entrances to sub divisions	6/11/2014 1:07 PM
59	Wide shoulders or bike lanes on collector roads	6/11/2014 11:00 AM
60	calibrate traffic lights so that major roads flow traffic (rather than stop, go, stop, go etc)	6/9/2014 3:41 PM
61	safe bike route to high cliff	6/8/2014 8:12 AM
62	Enforcement of noise ordinance-motorcycles especially	6/7/2014 11:55 PM
63	safe walking on all city streets	6/7/2014 9:55 PM
64	more roundabouts	6/7/2014 9:44 PM
65	sidewalk to piggly wiggly on appleton road	6/7/2014 9:32 PM
66	Improved lights at the corner of Appleton Road and Valley Road	6/7/2014 9:23 PM
67	Improved 'sensor' street lights	6/7/2014 7:39 PM
68	More trails	6/3/2014 8:45 AM
69	trail / sidewalk connectivity between parks/schools/shopping	5/28/2014 3:20 PM
70	Traffic lights at CB & Oakridge or 4 way stop	5/27/2014 7:52 PM
71	More frequent buses, every half hour instead of every hour	5/27/2014 3:10 PM
72	This time of year (spring) need to fill potholes just about everywhere.	5/15/2014 12:50 PM
73	Handicap accessible sidewalks/intersections - pavement along Racine Street by library in extremely poor condition.	5/15/2014 12:44 PM
74	Coordinate lights for continuous 12mph bicycle traffic on main road routes	5/11/2014 3:37 PM
75	more taxi service so as to improve/decrease fares and promote competition	5/9/2014 2:38 PM
76	many people walk on Casaloma also with no sidewalks	5/5/2014 4:17 PM
77	Additional Bus routes (Convenience)	5/5/2014 3:28 PM
78	I'd like to see some system of bicycle friendly businesses or some type of certification. It's very frustrating to ride my bike to a business only to find out that they don't even offer a place to lock my bike.	5/1/2014 10:48 AM
79	bike lanes on Racine st.	4/29/2014 11:51 PM
80	Widen State Park Rd to accommodate regular, heavy bike traffic	4/29/2014 8:32 PM
81	sidewalks	4/28/2014 11:59 PM
82	fix damaged roads	4/25/2014 1:49 PM

83	lower speed limits on busy streets, College and Richmond	4/25/2014 9:28 AM
84	increase "medians" on main strets, for turning	4/23/2014 11:03 PM
85	Buses	4/22/2014 8:52 AM
86	bike lane for for county road A	4/21/2014 10:18 AM
87	More on demand paratransit service	4/21/2014 9:31 AM
88	Add off street bike trails for commuter and recreational purposes	4/18/2014 9:15 AM
89	Better snow removal	4/17/2014 1:41 PM
90	roads being maintained more frequently	4/17/2014 11:04 AM
91	bike and or pedestrian bridge over train tracks & Hwy 41 South end of Neenah	4/17/2014 8:43 AM
92	better condition of sidewalks	4/17/2014 8:20 AM
93	Keep the bus system we have. Fight for funding for it.	4/16/2014 11:45 PM
94	Bike lane/paved trail/ sidewalk along College Ave. Airport to Downtown	4/16/2014 9:18 PM
95	Speed control for traffic	4/16/2014 3:42 PM
96	bike share	4/16/2014 2:10 PM
97	designated bike/ped lanes crossing Hwy 41 via foot bridge	4/16/2014 10:32 AM
98	bike lane(s) on Propsect near 41	4/16/2014 10:29 AM
99	Painting the lines on the road	4/11/2014 10:51 PM
100	Better pavement marking at Mason & Northland Ave	4/10/2014 4:02 PM
101	Bike lanes along curb/gutter where streets wide enough	4/9/2014 6:02 PM
102	Increased enforcement of traffic control on one-way streets	4/8/2014 10:24 AM
103	more bicycle lanes	4/8/2014 8:52 AM
104	speed limits enforcement	4/8/2014 8:21 AM
105	Maps of walking or bike trails	4/7/2014 7:13 PM
106	Fix roads	4/7/2014 5:23 PM
107	better salting at Oneida and Midway	4/7/2014 5:15 PM
108	More bike lanes	4/7/2014 4:19 PM
109	better wayfinding	4/7/2014 3:52 PM
110	roundabout on Van Roy Road	4/7/2014 3:49 PM
111	More bus routes	4/7/2014 3:38 PM
112	bike trails between downtown Appleton and Fox River Mall	4/7/2014 3:08 PM
113	Safer crossing busy streets (for bikers or walkers)	4/7/2014 3:07 PM
114	Driver awareness of bikes	4/7/2014 2:52 PM
115	better road conditions	4/7/2014 2:47 PM
116	Sidewalks on roads going through industrial area	4/7/2014 2:43 PM
117	educate people on how roundabouts are suppose to work	4/7/2014 2:27 PM
118	do not block the box signs	4/7/2014 2:07 PM
119	Bike lanes on Cty Hwy A from Winnebago County through Outagamie County	4/7/2014 1:09 PM
120	connector to bike trail from CB trail to the mall	4/7/2014 12:07 PM

121	n/a	4/7/2014 11:44 AM
122	improvement of roads	4/3/2014 2:32 PM
123	More bike trails	4/3/2014 2:17 PM
124	More walkablility	4/1/2014 11:28 PM
125	Narrower streets	4/1/2014 9:09 PM
126	More parks/trails	4/1/2014 9:02 PM
127	Separate paved trail along CTH JJ	4/1/2014 2:39 PM
128	Road Diet = Ped/Bike Space on Bluemound	4/1/2014 1:41 PM
129	Increased bus frequency	4/1/2014 12:46 PM
130	more speed control/enforcement	4/1/2014 12:18 PM
131	water taxi	4/1/2014 12:00 PM
132	Improve roads	4/1/2014 9:05 AM
133	Defined bicycle corridors across the region	4/1/2014 8:07 AM
#	d.	Date
1	Bus routes used to accommodate the elderly I don't feel they do anymore per what I've heard from people and have seen. Put yourself in their shoes and you'll see a city that is not thinking of the elderly transit concerns.	7/27/2015 7:02 PM
2	Push businesses to offer more bike racks (e.g. it's unbelievable that Fratello's doesn't have one when it sits right on the Wiowash)	7/27/2015 8:42 AM
3	US public transportion sucks compared to the rest of the world and Oshkosh is no different - need to be less car centric. Look at Copenhagen please (since they have a harsh winter as well)	7/27/2015 6:33 AM
4	Sidewalks in the Town of Algoma!	7/26/2015 11:32 PM
5	Oshkosh should have public buses run shuttle to the major festival grounds to reduce traffic congestion and parking issues on private property. can use empty lots or large store lots for pick up and drop off. similar to milwaukee area for summerfest	7/26/2015 9:50 PM
6	Expansion of bike trail	7/26/2015 9:33 PM
7	Bike lanes	7/26/2015 9:17 PM
8	Fox Valley connected by light rail to Milwaukee	7/26/2015 8:01 PM
9	marking bike lanes better - painting them, through the downtown, for example, so that everyone knows what is the designated way to get from oneside of town to another.	7/26/2015 7:00 PM
10	Bury the ugly power lines!!!	7/26/2015 6:24 PM
11	mark bike lane and improve pavement on E side of Hazel in Osh	7/26/2015 5:12 PM
12	regional rail system	7/21/2015 8:52 PM
13	water taxi/shuttle	7/18/2015 4:34 PM
14	stopping in residential areas	7/11/2015 8:47 AM
15	water taxi	7/1/2015 10:13 AM
16	Train	6/16/2015 10:38 AM
17	Would like to see safe routes to schools be a priority. Too many kids are very inactive today. Causes health issues	5/8/2015 10:37 PM
18	more structured Ride Share program to increase peoples' use of it.	4/29/2015 1:17 PM
19	Increase hours and days for public transit - buses	4/24/2015 10:54 AM
20	Light rail to Mllwaukee and Minneapolis	3/29/2015 9:24 AM

21	Commuter Train service from Milwaukee to Appleton to Green Bay	2/27/2015 9:38 AM
22	less one way streets	1/28/2015 2:57 PM
23	Offer longer hours of operation (24/7 would be ideal)	9/10/2014 1:59 PM
24	Fernau Avenue project moved up (from Vinland Rd to Jackson St)	8/29/2014 2:57 PM
25	sidewalks in more areas	8/27/2014 9:02 AM
26	Add and/or widen bike lanes along arterial roads	8/26/2014 11:48 AM
27	I don't think the crosswalks are safe in the Oshkosh roundabouts. Crosswalks should be before/after the roundabouts instead of right in them.	8/25/2014 8:50 AM
28	Transit service to ATW	8/24/2014 8:05 PM
29	bike lanes	7/29/2014 10:40 PM
30	South Washburn pothole Repair	7/23/2014 7:08 AM
31	better maintenance of existing limestone bike trails i.e. regrade eroded areas, weed control of Friendship and Wiouwash Trails.	7/21/2014 7:15 AM
32	better driver education regarding bikers	7/7/2014 5:54 PM
33	Rent a Bikes in DT Oshkosh like other cities	7/7/2014 9:39 AM
34	PEOPLE GOING 60 OR MORE PAST OUTPOST TO 55	6/28/2014 7:39 PM
35	Signage on 114 announcing the new park and grocery store	6/26/2014 8:12 PM
36	eliminate truck traffic through village	6/26/2014 4:26 PM
37	sidewalks	6/24/2014 6:05 PM
38	Bike Lane or sidewalk along Hwy CA & CB	6/22/2014 8:24 PM
39	Eliminate 5 Pt. intersection of New York, Main, Harrisson	6/19/2014 5:30 AM
40	narrower auto lanes and wider shoulders	6/16/2014 2:41 PM
41	Ban 2-stroke vehicles for air quality	6/12/2014 11:12 AM
42	straight roads rather than winding roads	6/11/2014 1:07 PM
43	Speed humps to control traffic speed	6/11/2014 11:00 AM
44	railroad crossings are in very poor conditionshave down the road material to match the recessed rails and replace the wooden pieces); real embrassement for the city and unnessary wear on autos/bikes	6/9/2014 3:41 PM
45	incorporate bicycles into roundabouts, at minimum a sign indicating to vehicles that bikes are merging into traffic	6/8/2014 8:12 AM
46	better bus service	6/7/2014 9:55 PM
47	paved biking/walking trails	6/7/2014 9:44 PM
48	turn arrow at midway and appleton road	6/7/2014 9:32 PM
49	Signs signifying no turn on red on corner of Racine st and main st after traffic comes over the bridge	6/7/2014 9:23 PM
50	more roundabouts	5/28/2014 3:20 PM
51	Traffic lights at CB & Oakridge or 4 way stop	5/27/2014 7:52 PM
52	Trails in Neenah are great but seem disconnected and some just end, especially near the 41 roundabouts on Breezewood	5/27/2014 3:10 PM
53	Railroad track intersections with roads - Packard and Appleton St is bad.	5/15/2014 12:50 PM
54	No more roundabouts for intersections requiring more than two lanes.	5/15/2014 12:44 PM
55	Pedestrian only College Ave. between (at least Durkee and Oneida) perhaps to include Soldier Square as well	5/11/2014 3:37 PM
56	fix more roads in the near east and southeast neighborhoods	5/9/2014 2:38 PM

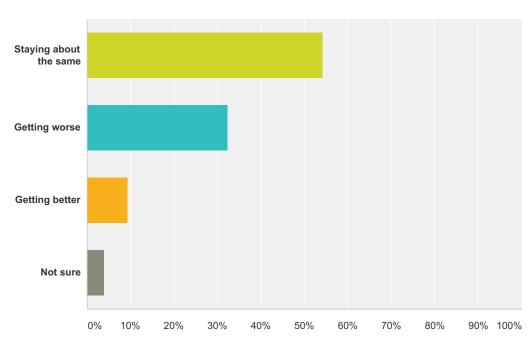

57	More Bike lanes/bike safety	5/5/2014 3:28 PM
58	Appleton Public Library and the downtown area needs more bike racks, especially at key times like Saturday morning farmer's market.	5/1/2014 10:48 AM
59	sidewalks	4/28/2014 11:59 PM
60	do not tear up a road that has just been fixed!	4/25/2014 1:49 PM
61	more salt under highways/viaduct	4/23/2014 11:03 PM
62	More trailslove the FVTC trail and would like that expanded.	4/22/2014 8:52 AM
63	More education for drivers related to roundabouts	4/21/2014 9:31 AM
64	More roundabouts	4/17/2014 1:41 PM
65	sidewalks on Buchanan Road	4/17/2014 11:04 AM
66	2 lanes south end of Green Bay Road -> fast merge into one lane by Goodwill	4/17/2014 8:43 AM
67	Bike lane, side walk, paved trail, College Ave. Downtown toKimberly, along Hwy.	4/16/2014 9:18 PM
68	better linking of existing trails outside the area	4/16/2014 10:32 AM
69	Get rid of all the rubber buttons for pedestrians to push	4/11/2014 10:51 PM
70	Enforced No U-Turns at Traffic Signal Intersections	4/9/2014 6:02 PM
71	Cut the 3 & 4 lane streets down to 2 lanes, using other lanes for bicycle use	4/8/2014 10:24 AM
72	public transportation	4/8/2014 8:21 AM
73	Separate walking and bike trails in heavily travelled areas	4/7/2014 7:13 PM
74	Bike lockers	4/7/2014 4:19 PM
75	road diets on certain streets	4/7/2014 3:52 PM
76	Driver awareness of walkers	4/7/2014 2:52 PM
77	laws proscribing use of cell phones while driving	4/7/2014 2:47 PM
78	More access across tracks in the industria section to get to CE	4/7/2014 2:43 PM
79	get rid of one cross walk by lawrence and install button to get the opportunity to cross	4/7/2014 2:07 PM
80	Bus that extends to CB and BB	4/7/2014 12:07 PM
81	n/a	4/7/2014 11:44 AM
82	More roundabouts where appropriate	4/1/2014 9:09 PM
83	narrowed streets perhaps 11 feet with 5-6 foot bike lanes	4/1/2014 2:39 PM
84	Ped/Bike Space on Casaloma	4/1/2014 1:41 PM
85	Consider alternate transportation modes (not just the car) when planning development	4/1/2014 12:46 PM
86	walking tours	4/1/2014 12:00 PM
87	Community support for more trails and bike lanes	4/1/2014 9:05 AM
#	e.	Date
1	More staff for saftey - more programs to encourage use	7/27/2015 6:33 AM
2	Some public transit service between Oshkosh and Omro/Winneconne	7/26/2015 11:32 PM
3	have regulations on how much foliage can grow to the edge of the road or sidewalks	7/26/2015 9:50 PM
4	Bike lanes	7/26/2015 9:17 PM
5	better signage that reminds auto drivers to watch for cylclists on their right at an intersection or to allow a cyclist going straight or turning left to do so without being hit	7/26/2015 7:00 PM

6	Oregon street is awful between the river and 12th street	7/26/2015 6:24 PM
7	streetcars/trolley	7/18/2015 4:34 PM
8	more consideration of children	7/11/2015 8:47 AM
9	College Ave at Mall drive needs pedestrian crosswalk and signals. Two large office buildings on the south side, we should encourage people to walk across the street to the restaurants around the mall	5/8/2015 10:37 PM
10	Better service to compete with Cabulance - Cabulance is NOT reliable	4/24/2015 10:54 AM
11	Slower speed limits on bike lane routes	2/27/2015 9:38 AM
12	consistent street names crossing the river	1/28/2015 2:57 PM
13	Public Transportation stops at all large employers in the area	9/10/2014 1:59 PM
14	Paving streets instead of filling potholes	8/29/2014 2:57 PM
15	more bike lanes	8/27/2014 9:02 AM
16	increase number of bike parking spots in Appleton and surrounding towns, villages, and cities	8/26/2014 11:48 AM
17	in Oshkosh, the intersection of Sawyer and Oshkosh Ave is terrible and unnecessarily complicated. Why wasn't a round about put in there?	8/25/2014 8:50 AM
18	Sidewalks in Grand Chute	8/24/2014 8:05 PM
19	bike lanes	7/29/2014 10:40 PM
20	EAA use 26 rather than 44, 26 provides more backup room.	7/23/2014 7:08 AM
21	more emphasis on Safe Routes to Schools	7/7/2014 5:54 PM
22	Discounts for bikers	7/7/2014 9:39 AM
23	CHANGE HWY 10 TO 4 LANES	6/28/2014 7:39 PM
24	create second entrance to State Park to get more traffice out of the village	6/26/2014 4:26 PM
25	bus traspertaion	6/24/2014 6:05 PM
26	Bus Service	6/22/2014 8:24 PM
27	Rebuild Algoma Blvd. in campus area	6/19/2014 5:30 AM
28	roundabouts	6/16/2014 2:41 PM
29	Rails with trails	6/12/2014 11:12 AM
30	just striping existing roads for bikes and not considering improving the road surface first (forces autos to drive on road cracks and manhole covers for very unsatisfactory ride and wear)	6/9/2014 3:41 PM
31	Idaho stop rules	6/8/2014 8:12 AM
32	bike route to High Cliff	6/7/2014 9:55 PM
33	Racine street should either made into a 4 lane road or signed clearer that it is a two lane road. It happens constantly that people get passed on the right.	6/7/2014 9:23 PM
34	bikelanes but not at the expense of street parking	5/28/2014 3:20 PM
35	Traffic lights at CB & Oakridge or 4 way stop	5/27/2014 7:52 PM
36	Consideration of street/bike/pedestrian infrastructure for older drivers/pedestrians. Add larger street signs, benches in downtown area, etc.	5/15/2014 12:44 PM
37	Re Design triangular traffic intersection of Oneida bridge, Lawrence Street,	5/11/2014 3:37 PM
38	pedestrian lights by all roundabouts	5/9/2014 2:38 PM
39	Kids bike "safe routes"	5/5/2014 3:28 PM

40	It'd also be really great to be able to put in locations and have a map that would route a suggested route based on where bike lanes are available and where traffic is minimal.	5/1/2014 10:48 AM
41	please - sidewalks everywhere	4/28/2014 11:59 PM
42	better bike lanes	4/25/2014 1:49 PM
43	Stop wasting money on public transit	4/17/2014 1:41 PM
44	safe walking/bike connection from Coenen subdivision to other side of CE	4/17/2014 11:04 AM
45	for my work commute - congestion at 41 and College Ave at rush hour	4/17/2014 8:43 AM
46	CE to Hwy. 55 in Kaukauna.	4/16/2014 9:18 PM
47	Add sidewalks in areas that don't have them	4/11/2014 10:51 PM
48	Reduce bus pass fees for frequent riders, especially those dependent due to employment	4/8/2014 10:24 AM
49	easy to understand bus routes	4/8/2014 8:21 AM

Q12 Do you feel traffic in your municipality is:

Answered: 278 Skipped: 5

Answer Choices	Responses	Responses		
Staying about the same	54.32%	151		
Getting worse	32.37%	90		
Getting better	9.35%	26		
Not sure	3.96%	11		
Total		278		

Q13 If you answered "getting worse" in the previous question, where is traffic congestion a problem in your municipality? (Please specify street/road name)

Answered: 86 Skipped: 197

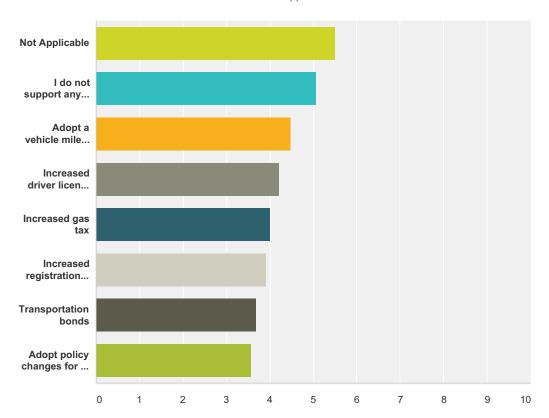

#	Responses	Date
1	9th ave. Around Kwik trip, walgreens, cvs area. Getting in and out in the 9th ave. Traffic is taking your life in your hands - it also depends on the other drivers. Perhaps cross traffic shouldn't be allowed in this strip. Also, the witzle round a bout and any others where you need to change to the rite lane really quickly because you want to go right at the next round about.	7/27/2015 7:02 PM
2	Traffic congestion is not exactly a problem, but road conditions are. (This is a poorly-worded question following from #12.)	7/27/2015 1:19 PM
3	Just in general - everywhere, more cars, more speeding Not bike friendly at all.	7/27/2015 6:33 AM
4	Around 41 and frontage roads	7/26/2015 10:52 PM
5	21. Witzel. 9th ave	7/26/2015 9:17 PM
6	Out by hwy 41 on the frontage roads and people do not know how to use the round abouts!	7/26/2015 6:24 PM
7	Oneida street Hwy 441 Hwy KK 441	6/22/2015 1:23 PM

#	Responses	Date
1	I'd love to bus to work in Appleton, I would even do up to 5-10 miles each direction via bicycle, but but 2 hours-one way, by busARE YOU F***** KIDDING ME???	7/27/2015 6:08 PM
2	I didn't rake many items in question 14 because I don't know what they are and how they would affect transportation.	7/27/2015 1:14 PM
3	Longer city routes are a big need as well. City to city public transport should be on the table and a high priority.	7/27/2015 6:33 AM
4	Oshkosh buses are great, and it would be nice if they ran until 8 or 9PM. Easier connections to Appleton, plus connections to Milwaukee would be wonderful.	7/27/2015 5:34 AM
5	I commute from Oshkosh to Green Bay and would much prefer rail service between those cities if it was at least as fast as driving. Obviously not including the additional travel time before and after use of the rail. The point is to be free for other activities, not be using miles/gas on my car, and not have to rely of someone else keeping a clean car, driving safely, or being on time as with carpooling.	7/27/2015 5:26 AM
6	Emissions testing could also bring in revenue, along with increasing motorbike liscence, electronic parking meter. Instead we have giant parking losts that 1, take up space; 2, people are able to park for free, 3, allows people to drive to each store with their car; 4, these parking lots cost money to repair	7/27/2015 2:21 AM
7	Oshkosh claims to be a fairly walkable city but it's really not and that's frustrating to me. On most sidewalks I cannot even walk next to my husband if we have our daughter's stroller with us. The new WI street bridge is nice, but that's about it. Lots of work to be done before I consider this city safely walkable.	7/26/2015 6:24 PM
8	I HATE ROUNDABOUTS, fix grand	7/11/2015 8:47 AM
9	The more bikes the better. If ECWRPC really is committed to the future, then they of all people should know that it will need to be 100% self-sustaining. Increasing bicycles and bicycle infrastructure is a step in the right direction, but long-term they should really consider using a train/metro system. This may seem unfeasible or unrealistic, but the fact of the matter is the oil trains at some point will stop- why not get ahead of the game?	6/16/2015 10:38 AM
10	Getting around is one of the hardest parts regarding upward social mobility in the Fox Valley. A lot of opportunity is lost for someone without a car because the transportation systems here are somewhat poor, especially public transit. I think a better transit system would do a lot for developing the Fox Valley upwards into the future.	6/8/2015 2:35 PM
11	discounted cab rides for grocery shopping, laundry services and food pantries for all citizens regardless of age or abilities would be helpful.	4/29/2015 1:17 PM
12	Please share results of survey in Northwestern	4/24/2015 10:54 AM
13	Don't waste money on extravagant designs on highways (brick, murals, iron fences),. Keep them simple, but well built so they last.	3/27/2015 7:41 AM
14	USE GAS TAX REVENUE FOR ROAD USE, NOT FOR BIKE & HORSE PATHS. GET REVENUE FROM ELECTRIC CARS. THEY ARE FREELOADING NOW.	3/20/2015 10:09 AM
15	To acquire and keep new young talented professionals in Wisconsin, we need to make our area friendly to active individuals. Higher young paid professionals spend a lot of free time outdoors and if our community makes it easier for them to get out in their neighborhood they will value this area more and want to stay in Wisconsin long term. Times are changing and Wisconsin needs to make some changes to stay current.	2/27/2015 9:38 AM
16	REGISTATION FEE FOR ELECTRIC VEHICLES SHOULD BE BASED ON THEIR ROAD USAGE. RIGHT NOW, THEY MOOCH OFF THE REST OF THE MOTORING PUBLIC. RAISE RATES ON PUBLIC TRANSPORTATION FOR THE RIDERS ARE PAYING FOR THE SERVICE THEY RECEIVE. STOP WASTING TRANSPORTATION DOLLARS ON BIKE/HORSE PATHS THAT ELIMINATE TRAFFIC AND PARKING LANES.	1/14/2015 3:06 PM
17	You guys are going to spend the annual 1.8 billion how you want to anyways, so who do you think your fooling?	11/30/2014 2:03 PM
18	We need an RTA with a dedicated sales tax for transit in the Fox Cities	8/27/2014 9:02 AM

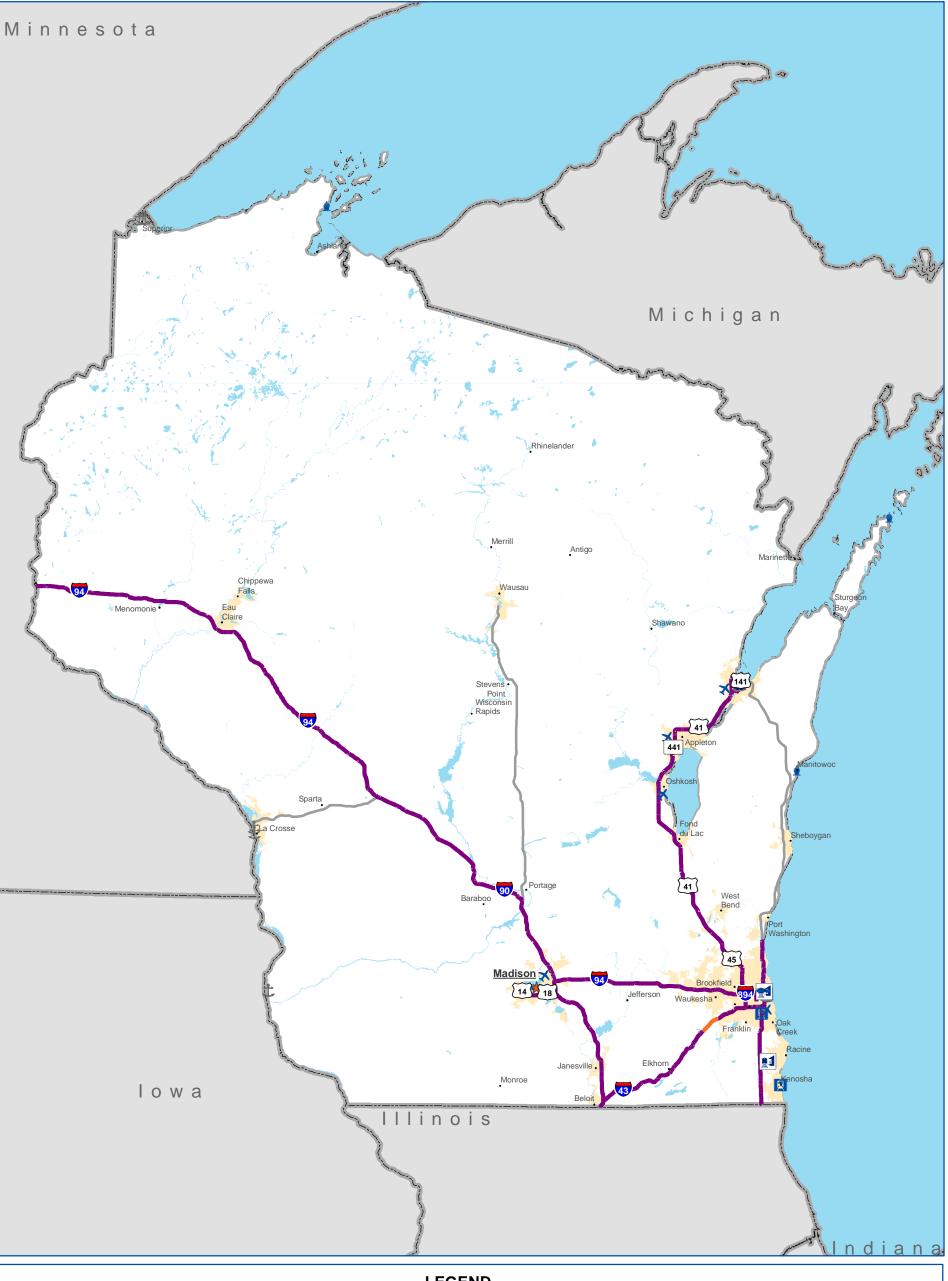

19	Support increased registration fees for semi-trucks and other large vehicles (school or tour buses) that are more destructive to roads than cars. Work with land use planners and local plan commissioners to develop more TOD's.	8/26/2014 11:48 AM
20	Traffic has improved in intersections with roundabouts but I feel that roundabouts have become unsafe because of speeding and other bad driving behaviors. More monitoring and enforcement of safety/laws needs to be done at roundabouts.	8/25/2014 8:50 AM
21	I bike to work in the summer as often as weather permits. Some weeks it is daily. Other weeks it is just a day or two. The survey didn't offer an option for more than weekly, but less than daily.	8/25/2014 7:35 AM
22	I think it is imperative to maintain public transportation (a strong bus system) for citizens who cannot afford a car to ensure access to jobs and schooling. An active rail system linking Milwaukee, Madison, Appleton, Green Bay, and Minneapolis/St. Paul would also be a big plus.	8/24/2014 9:29 PM
23	Thanks for doing this. Good questions!	8/24/2014 8:05 PM
24	More enforcement results in more citations. More citations results in more revenue. I work in the transportation industry and spend a good amount of time on 41, the infractions our crews witness on a daily basis are jaw dropping. 41 corridoor enforcement would trickle down to local roads. Everyone in WI knows not to speed through Rosendale we need to make it known to keep speeds reasonable on the 41 corridoor.	7/23/2014 7:08 AM
25	Communities have done a great job of starting trail systems but they do not link. We need to complete the links so non-motralized travel can be promoted.	7/7/2014 5:54 PM
26	SHARP ROCKS AROUND THE WATER AREA WANICK PARK- KIDS WILL BE INJURED	6/28/2014 7:39 PM
27	I do not support any increase in any way to support public transportation.	6/26/2014 12:01 PM
28	none	6/24/2014 6:05 PM
29	I support roundabouts as an enhancement to traffic flow	6/19/2014 5:30 AM
30	Thanks for the opportunity.	6/9/2014 3:41 PM
31	We Need To Become Moped Friendly They Are On The Streets All The Time Now Because Of Excellent Gas Mileage, Unfortunately Many Traffic Lights Can't sense their Presence. Take Routes Now With Minimal Lights And Mostly Right Turns.	6/8/2014 6:56 AM
32	Stop taxing the crap out of us and learn to manage your budgets	6/7/2014 10:59 PM
33	stop patching roads that need to be redone	6/7/2014 9:32 PM
34	We NEED passenger rail service Milwaukee to GB to Rhinlander and over to Eau Clair and La Crosse	6/7/2014 9:29 PM
35	Along with transportation, I would like to see general maintenance of trees and landscaping in the City of Menasha - take care of what you have first. Some areas of the city have been neglected by the city for years - and it is clearly visible.	6/7/2014 9:25 PM
36	Why do I see buses nearly empty throughout the day? Cost to operate on a per person usage appears way out of whack.	6/7/2014 7:39 PM
37	What has happened to the gas tax collected for road improvements??? Lets use the \$ collected for the purpose they were meant to be. Lets not rob this fund for other things.	5/27/2014 7:52 PM
38	Consideration needs to be given to the increasing graying of the population in terms of driving ability and alternative transportation. If one is not going to downtown Appleton within the CIty of Appleton, Valley Transit is not a very viable option. Roundabouts are not the answer to every intersection. While roundabouts work well for lower volume roads, they do not work well for multi-lane high congestion roads. Not only do they cause more accidents, even though less sever, the are also less safe for pedestrians and bikes.	5/15/2014 12:44 PM
39	Streets will welcome whoever is invited. Right now, they are designed exclusively for vehicle traffic. The biggest shift that needs to be made is designing streets (and cities) for people. A high speed rail seems a distant goal, but with some coordination among local governing entities it could appear and beginning benefitting the whole region soon!	5/11/2014 3:37 PM
40	I am planning to go back to Fox valley Tech in Appleton,Wi. next year 2015.	5/2/2014 4:50 PM

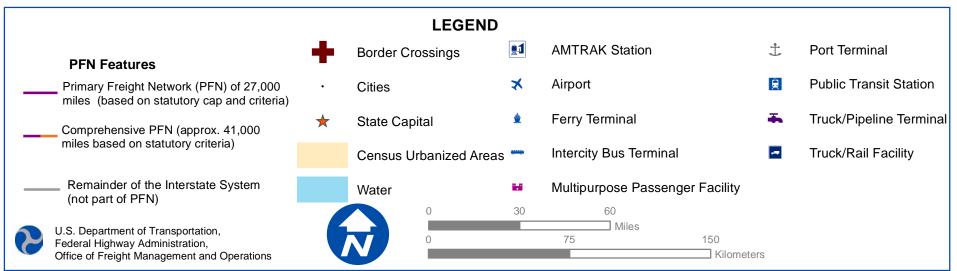

41	Even though I do drive a car, I'd really like to see this area stop compromising with vehicle users on bike lanes. Some of the modificaitons I've seen to bike lanes like in front of Grace Lutheran Church on Mason St. in Appleton. In my opinion, continuing to allow on-street parking and forcing bikers into the car lane is BEGGING for an accident. that the biker is assured not to win. People's convenience SHOULD NOT override what research shows as safe bike lanes. This goes, too, for width of bike lanes. When I ride with my 7-year-old, I can tell you she needs the ENTIRE width of the bike lane because she is still learning how to stay balanced.	5/1/2014 10:48 AM
42	I use Valley Transit when I just do not feel like driving or want to help the enviorment.	4/29/2014 11:51 PM
43	sidewalks - thanks!	4/28/2014 11:59 PM
44	Bus transportation takes too long. There are too many stops and not enough people on the buses. Route needs should be reassessed.	4/25/2014 1:49 PM
45	I don't want to pay for anything extra mentioned in #14. I feel I pay enough already for my vehicle, taxes, and fees.	4/25/2014 9:28 AM
46	Would like to see a Regional Transit Authority created. Although I don't use the Fox Valley Transit system, there is a great need for those who need it to get to work, grocery store, etc.	4/22/2014 8:52 AM
47	There was no opportunity to mention "toll roads" in Question 14. I believe this must be in the conversation mix.	4/21/2014 2:39 PM
48	I would like to see a bike trail/path from Sunnyview Rd. to Murdock Ave. and another from Indian Pt. Rd. to the Neenah City limits.	4/21/2014 10:18 AM
49	As an old retired person I will never ride a bike (physically unable). I depend on car, and need for bus and para transit to be there when I can no longer drive my own car.	4/16/2014 11:45 PM
50	Strongly Support Fox Valley RTA Legislation	4/16/2014 9:18 PM
51	We are spending an unbelievable amount of money on Hwy 41 from Oshkosh to Green Bay and on many unneeded roundabouts. This waste needs to be stopped and we need to put together a sensible plan for the maintenance of current roads and bridges. And we must put together an affordable plan for practical solutions to traffic challenges. We are currently spending more than enough money on roads but we are not spending it in the right places.	4/16/2014 4:15 PM
52	Kaukauna is very pedestrian friendly being about 90%+ side walked. Promoting safe bicycle use is a must to encourage people to ride to work.	4/16/2014 3:42 PM
53	should pay license fee on weight of car like MN does, since heavier cars cause more damage than lighter weight cars	4/13/2014 7:05 PM
54	We need at RTA. Public transit would help in so many ways, but only with increased ridership and/or more routes and longer hours.	4/12/2014 10:06 PM
55	Would very much like transportation arrangements to Green Bay. I travel there for work with varying hours which makes carpooling difficult. Would love to have a rail system or a bus service.	4/11/2014 10:51 PM
56	I did not answer #14 as I do not know what tranportation bonds are	4/11/2014 7:46 PM
57	Why bother having speed limits when they are not enforced?	4/10/2014 4:02 PM
58	I am satisfied with the current transportation system in the Town of Grand Chute WI.	4/9/2014 6:38 PM
59	Eliminate agencies like ECWRPC who have vague outcomes and accomplishments for all the tax dollars they consume.	4/8/2014 10:24 AM
60	I hope that you will survey limited income families as well.	4/7/2014 8:11 PM
61	Why are so many busses running empty or almost empty? Ridiculous!! Waste of taxpayers' money. Mini busses could be used.	4/7/2014 4:20 PM
62	I live in the country 8 miles from the nearest towns.	4/7/2014 3:37 PM
63	n/a	4/7/2014 2:47 PM
64	Why does your age question have 15 year increments until age 65 and then you lump everyone over 65 together. There are significant differences between a 65 year old and an 85 year old!!!	4/7/2014 2:31 PM
65	Roundabouts in Neenah have been very appreciated, much less congestion since they were put into place! I suggest mandatory driver's testing for older adults based on criteria to assure safe roadways.	4/7/2014 1:09 PM

66	I think transportation needs to become a higher priority in the Fox Valley.	4/7/2014 12:07 PM
67	Re: funding. I would like to see a funding mechanism that does not unduly burden people of low-incomes. Something like a gas tax does that.	4/3/2014 2:17 PM
68	State should fund less roads and more bike lanes, buses, trains, and walking facilities. Plan no subdivisions w/o alternative modes of transportation.	4/1/2014 11:28 PM
69	DO WHAT YOU CAN TO KEEP TAXES DOWN AND NOT TO FIGURE WAYS TO TAKE AWAY FREEDOMS BY PUNISHING PEOPLE WHO WOULD LIKE TO DRIVE THEIR CAR. IF YOU WANT TO TAKE THE BUS OR RIDE THE BUS THAT IS FINE. LET THE REST OF US ALONE.	4/1/2014 1:17 PM
70	I live out in the country and commute to Green Bay (20 min). Biking to work is out of the question, but I would enjoy more rec opportunities	4/1/2014 12:18 PM
71	Please include more rail in your planning efforts. This survey is largely auto driven v. other forms of transit. More interconnection between Fox Valley, Oshkosh, Fond du Lac in terms of transit other than auto.	4/1/2014 8:07 AM

You are invited to a public information meeting/open house concerning the update of the Appleton (Fox Cities) Transportation Management Area (TMA) Long Range Transportation/Land Use Plan. This plan is required for all urbanized areas, nation-wide, and must be updated every 5 years. TMA staff is seeking input from all persons interested in the future of area highways, buses, paratransit, trucking, railway, bicycle and pedestrian transportation, and the relationship between land use patterns and transportation systems. Please join us to learn about the planning process and to offer your input and concerns. The meeting/open house is scheduled for:

Thursday, April 23, 2015 4:00pm - 6:00pm **UW-Fox Valley, Emeritus Room** 1478 Midway Road, Menasha, WI 54952

If you require special accommodations or would like additional information contact us at 920.751.4770, or at http://fcompo.org/planning-activities/long-rangetransportation-planning/. Or scan the QR code with your smart phone:

SUMMARY OF PROCEEDINGS

SUMMARY OF PROCEEDINGS

Transportation Committee East Central Wisconsin Regional Planning Commission ECWRPC Offices Tuesday, October 13, 2015

Committee Members Present Neal Strehlow, Chair Ken Robl, Vice Chair Jeff Nooyen Jerry Erdmann Dick Koeppen Joseph Koch (permanent alternate for Martin Farrell) Deborah Wetter Jill Michaelson Sandy Carpenter Matthew Schreiber	
Staff Members Present Walt Raith Dave Moesch Joe Huffman Kolin Erickson Lauron Hinch Emily Verbeten Also Present Dwight McComb.	ECWRPC ECWRPC ECWRPC ECWRPC ECWRPC
Mary Forlenza	

The meeting was called to order by Mr. Strehlow at 1:30 P.M.

- Mr. Strehlow welcomed the group and began introductions.
- 1. Introductions, Statement of compliance with Wis. Stats. Ch. 19, Subchapter V, Sec. 19.84 regarding Open Meetings
- 2. Public Comment

No comments.

- 3. Pledge of Allegiance
- 4. Discussion and action on July 14, 2015 Transportation Committee Summary of Proceedings

Mr. Strehlow stated the summary of proceedings from the July 14, 2015 meeting was enclosed in the meeting materials. Mr. Strehlow asked the committee if there was any discussion or comments on the summary of proceedings. Hearing none,

- Mr. Strehlow asked the committee for a motion. Mr. Robl made a motion to approve the summary of proceedings, Mr. Nooyen seconded the motion and the motion passed unanimously.
- 5. Discussion and action on Proposed Resolution 24-15: Adoption of the Transportation Improvement Program for the Oshkosh Urbanized Area 2016
 - Mr. Moesch reviewed the draft Transportation Improvement Program for the Oshkosh Urbanized Area with the committee. He reviewed the listing of projects for both committed and illustrative road projects. There was a general discussion regarding dropping the Fernau Avenue STP-Urban project and transferring these funds to the Main Street project. Mr. Moesch also reviewed funds attached to the local transit system. There was a general discussion regarding bus replacement and repair costs. Moesch noted that the Oshkosh Transportation Improvement Program is currently under a 30-day public comment period (posted in the Oshkosh Northwestern) ending October 27th prior to the Full Commission meeting on October 30th; no comments have been received to date.
 - Mr. Strehlow asked the committee if there was any discussion or comments regarding Proposed Resolution 24-15. Hearing none, Mr. Strehlow asked the committee for a motion. Mr. Nooyen made a motion to approve Proposed Resolution 24-15, Mr. Koeppen seconded the motion and the motion passed unanimously.
- 6. Discussion and action on Proposed Resolution 25-15: Adoption of the Transportation Improvement Program for the Fox Cities (Appleton) Transportation Management Area 2016
 - Mr. Moesch reviewed the draft Transportation Improvement Program for the Appleton (Fox Cities) Urbanized Area with the committee. He reviewed the listing of projects for both committed and illustrative road projects. Mr. Moesch noted the Appleton (Fox Cities) Transportation Improvement Program is currently under a 30-day public comment period (posted in the Appleton Post Crescent) ending October 27th prior to the Full Commission meeting on October 30th; no comments have been received to date. Mr. Moesch noted two projects were approved for the STP-Urban Program; CTH CA and the Memorial Lift Bridge in Kaukauna. Ms. Carpenter noted WisDOT Central Office is updating their financial calculations regarding funding allocations for the STP-Urban Program state-wide and future amendments to both the Oshkosh and Appleton Transportation Improvement Programs will be needed to reflect those changes. She noted these changes were taken to provide a more fair and consistent allocation of funds across the state.
 - Mr. Strehlow asked the committee if there was any discussion or comments regarding Proposed Resolution 25-15. Hearing none, Mr. Strehlow asked the committee for a motion. Mr. Robl made a motion to approve Proposed Resolution 25-15, Mr. Koeppen seconded the motion and the motion passed unanimously.

7. Discussion and action on Proposed Resolution 26-15: Adoption of the 2016 Transportation Work Program

Mr. Raith briefly reviewed each work element of the draft Transportation Work Program for the Appleton, Oshkosh and Fond du Lac Urbanized Areas with the committee. He noted under MAP-21, performance based planning, data collection and monitoring and tracking trends has become a priority. There was also a general discussion on work elements regarding air quality monitoring/non-attainment status. Mr. McComb noted this guidance would be decided on in the next 6 months.

Mr. Strehlow asked the committee if there was any discussion or comments regarding Proposed Resolution 26-15. Hearing none, Mr. Strehlow asked the committee for a motion. Mr. Erdmann made a motion to approve Proposed Resolution 26-15, Mr. Koeppen seconded the motion and the motion passed unanimously.

8. Discussion and action on Proposed Resolution 27-15: Adoption of Appleton (Fox Cities) Transportation Management Area (TMA) Long Range Land Use/Transportation Plan

Mr. Erickson reviewed the draft Appleton (Fox Cities) Long Range Transportation Plan (LRTP) with the committee. He noted staff has slowly reviewed key chapters with the committee over the last year and a half. Mr. Erickson also noted the Appleton (Fox Cities) LRTP is currently under a 30-day public comment period (posted in the Appleton Post Crescent) ending October 29th before the Full Quarterly Commission meeting; no comments have been received to date. Mr. Raith noted this and future LRTPs have a focused effort on performance measures and data trends which staff will monitor over the life of the document. Mr. Raith added that staff will create a condensed executive summary document to supplement in addition to the LRTPs.

Mr. Strehlow asked the committee if there was any discussion or comments regarding Proposed Resolution 27-15. Hearing none, Mr. Strehlow asked the committee for a motion. Mr. Robl made a motion to approve Proposed Resolution 27-15, Mr. Nooyen seconded the motion and the motion passed unanimously.

9. Discussion and action on Proposed Resolution 28-15: Adoption of Oshkosh Metropolitan Planning Organization (MPO) Long Range Land Use/Transportation Plan

Mr. Erickson reviewed the draft Oshkosh Metropolitan Planning Organization (MPO) Long Range Transportation Plan (LRTP) with the committee. Mr. Erickson also noted the Oshkosh MPO LRTP is currently under a 30-day public comment period (posted in the Oshkosh Northwestern) ending October 29th before the Full Quarterly Commission meeting; no comments have been received to date.

Mr. Strehlow asked the committee if there was any discussion or comments regarding Proposed Resolution 28-15. Hearing none, Mr. Strehlow asked the committee for a motion. Mr. Erdmann made a motion to approve Proposed Resolution 28-15, Mr. Koeppen seconded the motion and the motion passed unanimously.

10. 2015 Appleton TMA Certification Review – Federal Highway Administration

Mr. McComb briefed the committee on the upcoming Appleton TMA Certification Review to be held October 21-23rd. He noted this certification is the first for the Appleton TMA and will subsequently occur every four years. Mr. McComb reviewed the metropolitan transportation planning process with the committee, which he noted is focused on the 3C's of continuing, cooperative and comprehensive planning process with federal funding. He also stated Federal Highway staff with the help of ECWRPC staff will host an open house from 5:00 pm to 6:30 pm as part of the TMA Certification Review at the ECWRPC office. Public comments and input are encouraged. He noted the importance of planning for multimodal transportation options in the TMA planning area. Mr. McComb noted when the certification review is complete, a summary report will be sent to the TMA to review and improve upon the entire process. There was a general discussion regarding the current federal transportation bill and future funding options.

11. Update on Lake Denevue/USH 45 Drainage Study

Mr. Huffman explained ECWRPC staff worked with Fond du Lac County and the Town of Empire regarding a recent drainage study at the USH 45 and CTH H intersection and Lake Denevue. ECWRPC worked with the Town of Empire on this as a technical assistance project. He reviewed the background, existing conditions and briefly mentioned strategies and approaches outlined in the report. He noted the full report can be found on ECWRPC's website if the committee was interested in learning more about this study.

12. Valley Transit Update

Ms. Wetter provided a brief overview of Valley Transit's Strategic Plan. She noted this was a 6-7 month process with help from their steering committee, which was represented by ECWRPC. Using the Strategic Plan, Valley Transit will use the next year to review their internal systems and improve overall service to the public before making changes to the system. Ms. Wetter also noted Valley Transit is working with Neenah Foundry, Plexus and Menasha Packaging to pilot a free shuttle service for workers through the end of the year. She noted the shuttle service under the pilot program is free of charge and has been very popular transportation option for these workers. It was a good example of a public-private partnership. She also reviewed 2014 service numbers with the committee. There was a general discussion on the importance of public transportation.

13. WisDOT Regional Project Update

Ms. Michaelson updated the committee regarding WisDOT Program Project Rebalances for the Northeast Region. Various regional projects have revised start dates, including Highway 23 from USH 151 to CTH P (start in 2017), State Highway 15 from Lily of the Valley Drive to USH 45 (start in 2020) and the USH 10/441 project from CTH CB to Oneida Street (underway with 2021 end date).

14. Re-affirmation of Resolution 19-15: Winnebago County Connecting People and Community Bicycle and Pedestrian Plan

Mr. Moesch updated the committee regarding the re-affirmation of Resolution 19-15, which was previously approved by the steering committee due to time constraints before the Transportation Committee meeting. Mr. Moesch noted ECWRPC will work as a subcontractor with Toole Design Group to create a county wide bicycle and pedestrian plan for Winnebago County with completion in 2016. Staff will lead in tasks such as project data collection and existing conditions assessment, program and policy recommendations and prioritization, implementation and funding strategies.

Mr. Strehlow asked the committee if there was any discussion or comments regarding Resolution 19-15. Hearing none, Mr. Strehlow asked the committee for a motion. Mr. Koeppen made a motion to re-affirm Resolution 19-15, Mr. Erdmann seconded the motion and the motion passed unanimously.

15. Bicycle and Pedestrian Program Update

Mr. Moesch stated staff has used the 2015 Action Plan to guide staff activities/initiatives for bicycle and pedestrian planning within the region. He reviewed completed and on-going action items. Mr. Moesch also briefly noted the 2016 Action Plan has been compiled for outlining activities for the next year. He also noted staff has been working on bicycle and pedestrian count program in 2015; with the purchase of eight counters (six infrared and two pneumatic tube counters) and have worked with 18 different municipalities to set up counters and to provided updated bicycle and pedestrian counts data.

16. Regional Safe Routes to School Program Update

Ms. Hinch introduced Ms. Emily Verbeten as the new Assistant Safe Routes to School Planner, taking over for Mr. Mike Patza. Ms. Hinch reviewed a number of recent program highlights, including the recent success of International Walk to School Day on October 7th. She noted approximately 16,500 students (67 schools) in the region participated in this event. There was good media coverage for this event. Additionally, she noted staff has helped establish seven walking school bus programs this fall from Hortonville, Oshkosh, Fond du Lac, Green Lake and Menasha school districts.

17. Adjourn

Mr. Strehlow asked if there was any other business. Hearing none, Mr. Robl made a motion to adjourn and Mr. Erdmann seconded the motion. The motion passed unanimously and the Committee adjourned at 3:00 P.M.

SUMMARY OF PROCEEDINGS QUARTERLY COMMISSION MEETING

East Central Wisconsin Regional Planning Commission

Place: Fond du Lac Legislative Chambers

160 S. Macy St.

Fond du Lac, Wisconsin

Date: Friday, October 30, 2015

Time: 1:15 p.m.

The meeting was called to order by Chair Kalata at 1:18 p.m.

- I. PLEDGE OF ALLEGIANCE
- II. MOMENT OF SILENT MEDITATION
- III. ROLL CALL
 - A. Introduction of Alternates and Guests
 - B. Welcome Mr. Martin Farrell, Fond du Lac County Board Chair

Roll call was taken showing the following attendance:

Commission Members Present

Bill Barribeau (Alt. for Alice Connors)	Calumet County
Pat Laughrin	Calumet County
Merlin Gentz	
Muriel Bzdawka	Menominee County
Ruth Winter	Menominee County
Helen Nagler	
Thomas Nelson	Outagamie County
Dave Kress (Alt. for Tim Hanna)	
Jeff Nooyen	
Michael Thomas	Outagamie County
Jerry Erdmann	
Tom Kautza	
Marshal Giese	Shawano County
Dick Koeppen	Waupaca County
Gary Barrington	
DuWayne Federwitz	
Donna Kalata	

East Central builds relationships and cooperative, visionary growth strategies that keep our region beautiful, healthy, and prosperous. 400 Ahnaip Street, Suite 100 • Menasha, Wisconsin 54952 • PHONE 920.751.4770 • www.ecwrpc.org

C. Introduction of Alternates and Guests

No alternates or guests were present.

IV. STATEMENT OF COMPLIANCE WITH WIS. STATS. SEC. 19.84 REGARDING OPEN MEETING REQUIREMENTS

Compliance with Wisconsin's open meeting requirements was acknowledged.

V. PUBLIC COMMENT

No public comment.

VI. APPROVAL OF AGENDA / MOTION TO DEVIATE

Mr. Bellin motioned to approve the agenda/deviate, Mr. Robl seconded the motion. The motion passed unanimously.

VII. APPROVAL OF MINUTES OF THE JULY 31, 2015 QUARTERLY MEETING

Mr. Bellin motioned to approve the summary of proceedings, Mr. Federwitz seconded the motion. The motion passed with 26 ayes and 1 abstention, Ms. Nagler.

VIII. ANNOUNCEMENTS AND REPORTS

A. Commissioner / Commission Announcements

1. Commissioner Appointments

Mr. Fowle noted that two outstanding Governor's appointments remain, one in Menominee County, Ruth Winter, and the other in Fond du Lac County. He provided an update on the status of each one. Mr. Fowle did note that one of the gubernatorial candidates in Fond du Lac County withdrew interest in the appointment. Another candidate will need to be put forward through the County Board before the position can be finalized.

2. American Planning Assn. – Wisconsin Chapter "Innovative Plan" Award

Mr. Fowle noted that staff received an innovation award at the Wisconsin Chapter - American Planning Association Conference for the bicycle and pedestrian plan for the Appleton Transportation Management Area (TMA) and Oshkosh Metropolitan Planning Organization (MPO) areas. This is the tenth consecutive year that East Central has received either a state or national-level recognition for its programs/projects. The TMA and MPO areas, as well as Winnebago County and WisDOT are recognized as well with this award.

B. Staff Announcements

1. Introduction of New Safe Routes to School Planner, Emily Verbeten

Mr. Fowle introduced Ms. Verbeten as the newly hired Safe Routes to School Planner. Ms. Verbeten filled the position vacated by Mr. Patza in the summer of 2015. Ms. Verbeten addressed the Commission and provided some background on herself.

2. East Central Health Team Video

Ms. Kraemer Badtke and Mr. Baron presented the health team video. East Central was accepted into the Healthy Wisconsin Leadership Institute in 2014 and is the first planning agency to be accepted into the program. The program is a partnership between the UW-School of Medicine, Public Health Wisconsin Partnership Program, and the Medical College of Wisconsin. Some of East Central staff have been involved in community health improvement plans through the county health

departments and have discussed that the built environment plays a large role in the health of individuals. Collaboration at a regional level was discussed by planning and health county partners and local jurisdiction partners to do health in planning work. The public health in planning connection has been long established based on need to separate industrial areas from residential areas. Staff began training in June 2014 and completed it in August 2015. The team included partners from the Town of Menasha as well as Outagamie and Shawano Counties. The training was advanced, specifically staff learned how to use a root cause analysis tool as well as visioning, planning, implementation work, effective meeting facilitation, an evaluation of what staff are currently doing, expanding partnerships, team building activities, meeting and communication outreach, and assistance in coalition development. Staff have already begun to implement the tools and training into the work being done at East Central. The health team video was an outcome of the training process. The focus is to demonstrate the need for multiple stakeholders to understand the connection and importance of health in planning and be able to take action for it. Stakeholders are needed for this type of work. The content and significance of the video were briefly explained. Shawano, Winnebago, and Outagamie Counties are predominantly being worked with on this but it is important to have all of the counties and communities involved. There is great collaboration between planning, public works, highway, and public health that is happening at the local level and it can be mutually beneficial for all departments involved. Active transportation is more than being active during free time; it is about getting to destinations and is all-encompassing.

Mr. Gentz asked if copies would be made to share with the appropriate departments in the region. Ms. Kraemer Badtke replied, yes.

Mr. Erdmann asked if Ms. Hoffman of the County's staff had access to the video to share with the County Boards. Mr. Baron replied, yes the goal of the video is to have it shared with the County Boards.

Mr. Fowle asked if the other County Boards desired to have it shown. There was agreement amongst commissioners that efforts would be made to show the video to the County Boards. Brief discussion ensued regarding the best methods to contact board members/communities and present the video throughout the region.

Mr. Fowle also noted that Matty Mathison, present in the video, was awarded an APA Chapter award as well for her efforts as a proactive citizen.

C. Media Reports / Upcoming Events

Mr. Fowle briefly highlighted media articles of note regarding East Central projects in the region.

D. Other Announcements

Mr. Fowle also thanked Mr. Farrell and Ms. Freiberg, Fond du Lac County Clerk, for their assistance with planning facility needs for the events of the day.

IX. BUSINESS

A. Steering Committee

1. Acceptance of the Summaries of Proceedings for the July 31, 2015 Meeting

Ms. Nagler motioned to approve the summary of proceedings, Mr. Barribeau seconded the motion. The motion passed unanimously.

2. Acceptance of the Summaries of Proceedings for the September 18, 2015 Meeting

Mr. Erdmann motioned to approve the summary of proceedings, Ms. Schneider seconded the motion. The motion passed unanimously.

3. 2015 Third Quarter Financial Report

Ms. Scheibe-Johnson provided an overview of the third quarter financial report. Items included in the overview were as follows: balance sheet, cash situation, accounts receivable, billings, prepaids, security deposit, insurance, total assets, accounts payable, external accounts payable, accrued liabilities, debt to Winnebago County, net position, statement of revenue and expenses, federal and state grants, pass throughs, revenue, carry over, 5304 grants, Highway 15 project, operating revenue/expenses, direct grant expenses, overhead expenses, over budget items, surplus, final and quarterly estimate.

Mr. Koeppen motioned to approve the financial report, Mr. Kautza seconded the motion. The motion passed unanimously.

4. Update on 2016 Work Program & Budget Planning

Mr. Fowle provided an update on the 2016 work program and budget. The Steering Committee is working to finalize the preliminary budget. Based on the set levy, decisions regarding health and dental insurance were made. The dental benefit will now be cost-shared by employees. Salary changes have been discussed and will be incorporated into the 2016 budget. The preliminary budget is approximately -\$60,000; however, nothing has been factored in for transportation planning funds that will be carried over from 2015 into 2016 at this time. Other contract opportunities may become available as well.

In regard to the work program, the technical assistance process was purposefully started one month earlier to better accommodate the timeline for development of the work program. Technical assistance project requests are slightly higher than in past years, with many of the projects being recreation-related. Many of the requests are also from Fond du Lac County communities.

5. Update on ECWRPC 2016-2018 Strategic Plan

Mr. Fowle provided an update on the strategic plan and requested that commissioners return the provided questionnaire at their earliest convenience.

6. Proposed Resolution 21-15: Amending the 2015 Work Program and Budget of the East Central Wisconsin Regional Planning Commission to Reflect the Re-Allocation of Funding Provided by the Department of Defense-Office of Economic Adjustment

Mr. Fowle noted that funds would be reallocated within the project. The Wisconsin Manufacturing Extension Partnership component of the defense project would be extended into 2016 as more time is needed to work with area businesses to assist them. Funds that will be unused from the UW-Oshkosh Accelerator Project will be put in East Central's part of the budget, much of which will be pass-through to consultants to assist in outreach and education materials. Some funds will also be used for staff costs as well.

Ms. Nagler motioned to approve the resolution, Mr. Bellin seconded the motion. The motion passed unanimously.

7. Proposed Resolution 22-15: Authorizing Commission Staff to Destroy Public Records According to the Adopted "Records Retention Policy and Destruction Schedule"

Mr. Gentz motioned to approve the resolution, Ms. Schneider seconded the motion. The motion passed unanimously.

8. Proposed Resolution 29-15: Adopting a Travel Policy for the East Central Wisconsin Regional Planning Commission

Mr. Fowle noted that this is the result of the federal regulations regarding grants, there is a need to be more specific with the travel policy and amendments will be made. There is one change to the policy under non-reimbursable expenses. The committee before approval added an item that stated a non-reimbursable expense would be lodging tax if staff did not provide the tax exempt form.

Mr. Erdmann motioned to approve the resolution, Mr. Kautza seconded the motion. The motion passed unanimously.

B. Economic Development Committee

- 1. Chairman's Report
- 2. Acceptance of the Summary of Proceedings for the July 8, 2015 Meeting

Mr. Barribeau motioned to approve the chairman's report and summary of proceedings, Mr. Giese seconded the motion. The motion passed unanimously.

3. Proposed Resolution 23-15: Adopting The 2015 Comprehensive Economic Development Strategy (CEDS) Annual Performance Report

Ms. Van Buren provided an overview and background history of the CEDS report. The annual performance report does not require a 30 day public review period, however the draft document was posted online and sent to the Economic

Development and CEDS Committee members. The CEDS Committee is also required to reaffirm and prioritize the goals. The CEDS Committee also reviewed the 2014 executive summary and provided feedback to staff that could be used for the 2015 document. The CEDS Committee also examined and ranked the economic and community development projects that were submitted by all the communities within the region. The submitted projects were either new projects or a status of previously submitted projects. A project's ranking does not guarantee funding from the Economic Development Administration, but is more of a method for prioritization of projects and the Commission's efforts to implement them.

Mr. Farrell motioned to approve the resolution, Mr. Gentz seconded the motion. The motion passed unanimously.

C. Open Space and Environmental Management Committee

1. Chairman's Report

2. Acceptance of the Summary of Proceedings for the July 31, 2015 Meeting

Mr. Federwitz motioned to approve the chairman's report and summary of proceedings, Mr. Laughrin seconded the motion. The motion passed unanimously.

3. Update on Weigh in on the Winnebago Waterways

Mr. Fowle provided a brief update on the Weigh in on the Winnebago Waterways. In mid-summer of 2015a proposal was given to the three County Executives to pursue incorporating \$15,000 each into the respective budgets for Calumet, Fond du Lac, and Winnebago Counties. There was concern raised about East Central's potential involvement as a contracted entity. Given the dynamics at the time, at the Open Space Committee meeting, the committee had made a resolution contingent on input from the three executives to remove the commitment that was offered of sharing \$45,000 of costs for the first year to double the county's money to have the position at the Commission. East Central at this time needs to move on and finalize its own budget and plan of work. Since then, the counties did propose the \$15,000 individually. Calumet and Fond du Lac Counties did/will likely approve their respective budgets, however Winnebago County did take action to amend the budget and remove the \$15,000. This does leave the question as to what the other two counties want to do in the event Winnebago County is not involved. After the meeting, Mr. Fowle received a phone call from a Winnebago County supervisor who feels that it is his charge to evaluate all the alternatives for creating this shared position. At the Winnebago County Board Meeting it was brought up that it would be logical that East Central should house and fund the position completely instead of asking the counties for additional funds. There may be opportunity for additional conversation on this matter and all three counties are represented on the Commission. Mr. Fowle responded to the individual that if a decision is to be made and if East Central is to fully fund the lakes coordinator position, Winnebago County will not only need to convince Fond du Lac and Calumet Counties, but also convince all of the other counties on the Commission. Mr. Fowle noted that a full-time position will be approximately \$90,000, half-time

would be \$45,000 and that may not be able to be absorbed under the current commitments so something must change..

Mr. Buechel commented that he assumed the Fond du Lac County Board would support the \$15,000 budget item. What will happen after has not yet been established in regard to contracting with an entity. The reason \$15,000 was provided was because it was felt that by the time this was approved in the budget it would be the second quarter of 2016. No reassurance can be provided at this time. Once the budgets are approved, the three counties must discuss the matter again and decide how to move forward.

D. Community Facilities Committee

1. Chairman's Report

2. Acceptance of the Summary of Proceedings for the June 10, 2015 Meeting

Mr. Bellin motioned to approve the chairman's report and summary of proceedings, Mr. Kautza seconded the motion. The motion passed unanimously.

3. Final Appeals Court Opinion on C. Kaukauna vs. Village of Harrison

Mr. Fowle noted that this is the court action which is likely to be the final action of the sewer service area discussion. The Village of Harrison prevailed against the last remaining legal challenge by the City of Kaukauna with their incorporation process and the additional territory that was added to the town at that time.

E. Transportation Committee

1. Chairman's Report

2. Acceptance of the Summary of Proceedings for the July 14, 2015 Meeting

Mr. Strehlow motioned to approve the chairman's report and summary of proceedings, Mr. Robl seconded the motion. The motion passed unanimously.

3. Update on Fox Cities Transportation Management Area (TMA) Designation

Mr. Raith noted in 2010 the Fox Cities Urbanized Area went over 200,000 in population and became a transportation management area (TMA). That entails certification by the Federal Highway Administration and Federal Transit Administration for federal funds received. The certification process took place, a public information meeting was also held on the first night of the process. The certification process was completed satisfactorily and the Commission was recertified for an additional four years. A letter of approval will be issued as well as a report for the whole certification process. An update will be provided once the report is received.

Mr. Fowle also shared a comment made by the Federal Highway representative who stated how much he appreciated East Central, particularly the creative and passionate staff involved in the program.

4. REAFFIRMATION of Proposed Resolution 19-15: Approving a Contract for Services between East Central Wisconsin Regional Planning Commission and Toole Design Group as a Subcontractor to the Winnebago County Bicycle and Pedestrian Plan [acted on by Steering Committee on 9/18/15 using the full authority of the Commission]

Ms. Kraemer Badtke noted that Winnebago County received a bicycle and pedestrian facilities program grant in 2014 from the Department of Transportation. This is a partnership between multiple departments at Winnebago County. At the time, East Central was approached by Toole Design Group to become a subcontractor on that particular bid. The focus of the plan is to increase active transportation opportunities for rural communities. It is a natural fit for East Central to be a subcontractor on this particular plan because East Central has active involvement from Omro and Winneconne on the Safe Routes to School Program and Oshkosh Area School District. Part of East Central's role will be community engagement and GIS data analysis and development for the plan along with local perspective and recommendations. The reason this resolution went through Steering Committee for approval was there was a timeline for starting the piece. The approximate dollar amount will be about \$26,800. The funds will come to East Central to have staff working on the plan collaboratively.

Mr. Buechel motioned to reaffirm the resolution, Mr. Bellin seconded the motion. The motion passed unanimously.

5. Proposed Resolution 24-15: Adoption of the Transportation Improvement Program for Oshkosh Urbanized Area-2016

Mr. Moesch provided an overview and brief background of the transportation improvement program and process. As part of the planning process this year, East Central staff worked with the Wisconsin Department of Transportation, local communities, and GO Transit. One project was able to be funded this year with STP-Urban funds – the North Main Street project. This was previously programmed in the document at 50 percent. It was determined that the Fernau Avenue project with the City of Oshkosh would drop out of the program and funding would be used to make up the existing portion to bring the project up to 80 percent federal funding. That project is scheduled for 2016. There are also transit operating and capital requests as part of the document.

Mr. Robl motioned to approve the resolution, Mr. Strehlow seconded the motion. The motion passed unanimously.

6. Proposed Resolution 25-15: Adoption of the Transportation Improvement Program for Fox Cities (Appleton) Transportation Management Area-2016

Mr. Moesch provided an overview for the Fox Cities Transportation Improvement Program. Mr. Moesch mentioned that both transportation improvement programs being discussed underwent a public review period, no public comment was received. In regard to the Fox Cities document, two projects were funded with STP-Urban funding: County Trunk/HWY C and College Avenue from County/HWY Trunk CB to Casaloma, which is a large project of approximately \$6 million in federal funding. The project is 80 percent federally funded. The Veteran's Memorial Lift Bridge in the City of Kaukauna was able to get funding of approximately \$880,000 in federal funding. East Central also worked with Valley Transit to get their capital and operating request submitted.

Mr. Nelson asked how much funding was federal versus state in regard to the lift bridge project. Mr. Moesch replied that 80 percent was federally funded with no state funding. Mr. Moesch stated that the city would generate 100 percent of the design to expedite the process.

Mr. Nelson asked if the construction was federally funded. Mr. Moesch replied that was correct.

Mr. Nooyen motioned to approve the resolution, Mr. Strehlow seconded the motion. The motion passed unanimously.

7. Proposed Resolution 26-15: Adopting the 2016 Unified Transportation Work Program and Annual MPO Certification for the East Central Wisconsin Regional Planning Commission

Mr. Raith provided an overview of the resolution. East Central works with the Department of Transportation (DOT) and Federal Highway Administration so the transportation budget must be started earlier in the year. The process begins in June. Mr. Raith briefly described the process of initiating the work program annually. The process must be finished by the end of October. In January when the Commission passes the total budget, this item will be inserted into the total budget. Under MAP-21, the new transportation legislation, there is a focus on performance measures and tracking the trends. There are also short-term items that are planned and completed as well. Funding is similar to last year.

Mr. Strehlow motioned to approve the resolution, Mr. Erdmann seconded the motion. The motion passed unanimously.

8. Proposed Resolution 27-15: Adoption of the Update to the Appleton (Fox Cities) Transportation Management Area Long Range Transportation Plan/Land Use Plan

Mr. Raith provided an overview of the resolution. There is one document for each entity: Appleton (Fox Cities),Oshkosh, and Fond du Lac. The Fond du Lac plan was passed. The Fox Cities Transportation Management Area (TMA) is currently up for approval. The plan goes out to 2050 and is full of recommendations. One change to

the long range plans is that they were not updated regularly. Under MAP-21 performance measures, much of this content is going to be put online so that it can be tracked into the future. For the Fox Cities Urbanized Area, there is only one large project left to do and that is the expansion of HWY 41 to Green Bay. In the Oshkosh plan, there will be an emphasis on a new arterial on the West side of the Fox Cities to take some traffic off of HWY 41. The transportation system is well-built out with the exception of these projects. No large-scale projects are scheduled to be initiated in the future. Focus will be maintained on what is currently in existence.

Mr. Raith noted the \$330 million that was removed from the transportation budget and that every time that occurs, documents have to be amended to reflect the change. Mr. Fowle interjected that he received an email from Senator Roth's office and the Joint Finance Committee scheduled a hearing for November 4th to release the bonding request that was submitted.

Mr. Nelson motioned to approve the resolution, Mr. Bellin seconded the motion. The motion passed unanimously.

9. Proposed Resolution 28-15: Adoption of the Update to the Oshkosh Urbanized Area Long Range Transportation Plan/Land Use Plan

Mr. Raith restated that the situation is similar to the previously listed Resolution 27-15. The only difference is the potential for a west-side arterial.

Ms. Nagler motioned to approve the resolution, Mr. Robl seconded the motion. The motion passed unanimously.

F. Regional Comprehensive Planning Committee

1. Chairman's Report

2. Acceptance of the Summary of Proceedings for the July 9, 2015 Meeting

Mr. Gentz motioned to approve the chairman's report and summary of proceedings, Mr. Thomas seconded the motion. The motion passed unanimously.

3. American Planning Association/American Health Partners Association "Plan4Health" Grant Award to Shawano & Menominee Counties

Ms. Kraemer Badtke and Mr. Baron briefly explained the grant award details. Earlier this summer the American Planning Association along with the American Public Health Association released a second round of funding that they received from the Center for Disease Control. East Central applied for this grant opportunity in partnership with Winnebago County for a bike-sharing project within the City of Oshkosh. It was a \$150,000 grant opportunity with zero local match. East Central also partnered with Shawano County and Menominee County for a food sharing and security program. East Central's grant with the City of Oshkosh did not receive funding, however Shawano and Menominee County did receive funding. No analysis or feedback has been received as to why funding was not received for Oshkosh. Notification was received that only two grants would be

given per state. Examining the demographic information, the Shawano/Menominee County area typically has more significant needs based on employment and other demographic information than the City of Oshkosh. Moving forward with the Shawano and Menominee County project, East Central will act as the subcontractor. This project will have a lot of changeability to it. Originally it was scheduled to begin in April 2016, however that has been changed to November 2015. Originally \$150,000 was requested, notification was received that \$130,000 was awarded. The timeline for the grant has been reduced from 15 months to ten months. The focus is on food systems planning and East Central does not have a lot of capacity in this area, there is the ability to learn from this experience. The grant aligns well with the health in planning work of East Central. Even though it is a food security grant East Central will be looking at access to food, grocery stores, etc. The grant focuses on adequate nutrition and healthy diets for all residents in the area. Mr. Baron briefly provided some background information on both Shawano and Menominee Counties.

Mr. Laughrin asked what the term "food security" meant. Ms. Kraemer Badtke replied that food security is the ability to purchase food, have a supply of food at home, and ensuring access to food through income, food pantries, etc.

Mr. Laughrin asked if the program was based on income. Ms. Kraemer Badtke replied that yes, it would be partially based on income. Shawano and Menominee Counties are on the lower end of the county health rankings. The built environment must be studied as well as physical activity, nutrition, and access to healthy nutritious food.

Mr. Fowle also added that food security can even allude to broader concerns including terrorism, biological conditions, an upset in the rail/freight system, etc. Food comes from all over the United States and it is not possible to be reliant on that in the event something fails.

Mr. Federwitz asked what farms are producing in the area. Mr. Baron replied that detail was not provided in that regard, the information came from Shawano County's application. The application does reference that the majority of farming operations in the county are not for human consumption. Ms. Kraemer Badtke added that after discussions with Shawano County staff, some of that analysis will be looked at and improved. Mr. Baron stated that this is not dissimilar to the rest of the region, there is a strong agricultural presence, and the possibility of whether there should be a stronger connection is being considered as the food is being grown yet residents do not have access to it. There are strategies for this, there will be coalition capacity building, a large research component, and a work plan will be identified and incorporated. A local food council will also be established. Ms. Kraemer Badtke also noted that best practices can be supplied to neighboring areas on how to make this work for them with flexibility to meet their needs.

X. ESTABLISH TIME AND PLACE FOR NEXT COMMISSION MEETING

The next meeting will be Friday, January 29, 2016, at a location TBD in the Fox Cities area.

APPLETON (FOX CITIES) TMA RESOLUTION OF ADOPTION

RESOLUTION NO. 27-15

ADOPTION OF THE UPDATE TO THE APPLETON (FOX CITIES) TRANSPORTATION MANAGEMENT AREA LONG RANGE TRANSPORTATION PLAN/LAND USE PLAN

WHEREAS, the East Central Wisconsin Regional Planning Commission is the designated Metropolitan Planning Organization (MPO) for the Appleton (Fox Cities) Transportation Management Area (TMA), and charged with conducting cooperative, comprehensive and continuing urban transportation planning as prescribed by federal and state law; and

WHEREAS, an update was prepared by the MPO to meet the requirement of the Moving Ahead for Progress in the 21st Century (MAP-21); and

WHEREAS, the principal elected officials of local governments in the Appleton (Fox Cities) Transportation Management Area, their designated staffs, technical advisory committees and policy boards and the public, have participated in the planning process; and

WHEREAS, all comments received through public information meetings, by U.S. Mail, the MPO website, telephone or other communication were presented to the technical advisory committee and the policy board and incorporated into the update. Now, Therefore:

BE IT RESOLVED THAT THE APPLETON (FOX CITIES) METROPOLITAN PLANNING ORGANIZATION ADOPT THE UPDATE TO THE APPLETON (FOX CITIES) TRANSPORTATION MANAGEMENT AREA LONG RANGE TRANSPORTATION/LAND USE PLAN:

Effective Date: October 30, 2015

Submitted By: Transportation Committee
